On the other hand, for every improvement made rendering a building safer than standard a reduction in insurance rate will be made. For example, for fire-resisting floors, so many cents per $100 will be deducted from the rate; for stand-pipe and hose; for watchman and clock; for casks and pails on the premises; for the enclosure of stairway and hoist, deduction is made for each item. Thus the prudent man benefits by having his prudence recognized, while the careless or penurious man is fined for omitting to protect himself. It has been made a subject of complaint, we are told, by Toronto merchants that the basis rate is in both Montreal and Toronto the same, where, as it is a matter of common knowledge that the streets of Montreal are much narrower than ours, and that the electrical wires in that city are even a greater source of embarrassment to firemen than here. The answer to this is that the narrowness of streets is in Montreal made by the specific rating an extra exposure, and the same thing applies to the menacing wires. So, while the basis rate is the same in both cities, the net rate which the insured has to pay will work out differently and in favor of Toronto in these respects.

The important feature to be observed is that everything done by an owner or tenant of a building to enhance the safety of his place from fire will be acknowledged by a reduction in rate, of which he receives the benefit. The key rate is determined upon the municipal fire protection appliances provided. The thickness of walls and their being carried above the roof or otherwise, the character of roof, the thickness of floors, the use or non-use of wired glass, the employment of metal or metal-covered shutters or windows and doors, the character of the artificial light used, the nature of the interior finish, the number of openings in a brick or stone wall, are all matters which affect the character of a building from a fire insurance standpoint. Wooden cornices and window casings, signs or other projections, wooden skylights, shingle roofs — all these are dangerous features in a building. In an address by an insurance expert before Toronto architects he asked his hearers to avoid breaking division walls between buildings, adding: "It is astonishing to what an extent this practice has grown, until we sometimes find that in as many as ten adjoining buildings there is not one party wall absolutely intact. "Avoid also, if possible," he says, "having the windows in one wall directly opposite the windows of the other." These and many other considerations, to which we hope to refer hereafter, are commended to the attention of business men who honestly desire to earn cheap insurance.

◆

BRITISH FOREIGN TRADE.

It is a good sign when we find an Englishman of ability and broad sense taking opportunity to advise his usually self-sufficient countrymen in the British Islands to abandon their insular notions and awaken to what other nations are doing in commerce. An example of this is to hand in a letter to the Birmingham Chamber of Commerce Journal for July, entitled "Reflections upon the Causes of the Slow Growth of British Trade in Recent Years," and signed "Manifold." The writer of this letter is known to us, but we have not his permission to reveal his identity. Suffice it that he is a Birmingham manufacturer who has travelled extensively. Returning in June from a second journey round the world, looking for business, he wrote to us: "I have visited most British colonies of importance, mainly with business objects in view. Canada's prosperity seems to continue unchecked; after touring through the Dominion one is spoiled for most other British Dependencies. Australia, for instance, is disappointing."

Having kept both eyes and ears open during his travelling in far countries, "Manifold" found evidences in both his lengthy journeys of a poor aggregate increase of British trade abroad in recent years, particularly in comparison with the growth of trade in United States and Germany. We quote freely from his letter, which seems to us a remarkable instance of speaking out boldly. Thus:

> An old-fashioned British manufacturer is often narrow-minded and one-sided, is frequently handicapped by business tradition and false commercial pride, and being, at the same time, too self-satisfied, is inclined to undervalue the present strength and the possibility of future progress of his competitors. In many cases also he may have too much money invested in solid, steady dividend-earning securities outside the business in the control of which he is himself actively engaged; this being so he may easily become too big for his boots, and acquire, from the commercial point of view, a strong tendency to "swollen head." Sometimes the British manufacturer places his recreation first, making it impossible, particularly during periods of pressure, to devote that attention to his business which it may for the time being demand. It is the writer's belief that the management of a business, even if the whole business belongs to its manager, is a trust not to be lightly administered. If a man finds it impossible, or feels disinclined to do what is right by his trust, he should call in help to enable the work to go forward, and not block the legitimate progress of his enterprise. A business cannot successfully, wholesomely, and rightly be allowed to "mark time" for an indefinite period. If it is not going forward it will not be able to stand still, but will, more or less rapidly, go back.
>
> It is well known that one of the great qualities of the American manufacturer is adaptiveness, and it may be safely asserted that a business man can be adaptive without being dishonest, and without losing real dignity and self-respect. Many British manufacturers may not yet have realized this. If a competitor is selling a given article at a given price to the satisfaction of a given market, and a maker of the same class of goods sees this and realizes that what he is making is not so commercially successful (either by reason of its shape, style, quality, packing, etc.), then he should try and go one better. But if, after giving the matter due consideration, he comes to the conclusion that he cannot to commercial advantage make any improvement, then let him adapt his competitor's article as it stands to his own make. Every manufacturer should feel himself to be justified in supplying the same article as his neighbor, so long as he does not infringe upon individual patent rights, trade-marks, names, labels, etc., either directly or colorably.

"Manifold" does not forget that he is a Britisher, however; and, although he perceives the advantage that the Yankee or the Frenchman has over John Bull in being a better salesman, having a more ingratiating manner and being willing to make goods of the pattern that colonials or foreigners want, still he stands up for his countrymen, declaring that "there is still no better business man than the normally able Britisher who is not suffering from 'swollen head,' and who is satisfied and happy to get right down to business, because he can look at things in a large way, and can carry out a large policy consistently and persistently without resort to dishonest trick or ingenious artifice." Go abroad, he says, to the manufacturer or merchant, or send men abroad, preferably young men, unhampered by old-world conventions, unhardened in the belief that "because a thing has been done in a certain way for fifty years that way is necessarily the best way." Is not this exactly what Chamberlain has been saying in a larger way? And because he dares to run counter to the beliefs of 1840 or 1850, and urges enquiry as to the best way to meet altered circumstances, he is proscribed by a very large body of English politicians. So strong is the belief of an Englishman in himself and his ancestors. Commercial travelling, says 'Manifold,' and he is speaking to English manufacturers, forms a very hard and rough school, and a man's mistakes and shortcomings, of necessity, become very soon patent to him. Conceit and bounce will not go down, though some self-assertion is imperative. His letter concludes with words which may properly be commended to the open-minded foreign trader: "At the present time, whilst tariffs and preferential duties are being so ardently discussed, should not business theories also be aired? The first step towards fighting against a fault or attempting to remedy a shortcoming in character is to realize the same, and to acknowledge it to one's self. If some British manufacturers have, here and there, faults and shortcomings, would it not be well for all, with a view to the upholding of our commercial power and integrity, that they should be helped to criticize themselves and their own policy, to the end that they may work out, as far as possible, their own individual success, independently of public, political, or Imperial measures?"

◆

—When, some little time ago, the electrical men of the United States invited the members of the Institution of Electrical Engineers of Great Britain to visit that country (the States), the invitation made no provision for a visit to Canada, and on this account it was declined by the English society. Recently, however, the Americans decided to include a Canadian trip in the invitation, and the British engineers have accepted, and will be in Montreal next week on their way to the St. Louis Fair. Will somebody please tell the Washington authorities of this incident. It may help to convince them that Canada is something more than the bleak fringe of territory and her people something better than the crude, unenlightened folk they suppose. Mr. Eugene Hale and his energetic friends may also find a further reciprocity argument in the circumstance.

◆

—News of special interest to Canadians concerning the iron ore districts of New Ontario is to be found in a report just made by Mr. Miller, the provincial geologist, to the Crown Lands Department of the Province. It appears that the joint committee who are inspecting the geological formation of Michigan and New Ontario iron ranges in behalf of the United States and Ontario Governments respectively are now in the Soo district, and are spending some days in the Huronian area. An interesting fact mentioned is that at Loon Lake, near Port Arthur, where two important ore discoveries have lately been made, the party decided to christen the district the "Animika iron range," and geologists and miners will take note. Mr. Miller further communicates that inasmuch as the party have agreed on a common nomenclature for various geological formations, differences hitherto arising from various classifications will be removed. The United States officials have sent eight men to map out the new Animika range, while another party is making a geological map of the iron range to the north of Biscotasing, on the Canadian Pacific Railway. As all patriotic Canadians are just now watching with peculiar interest the development of the iron and steel industry of the country, these particulars showing activity in exploration are of especial moment. We know, in a general way, that we have lots of iron ore, but it is of immediate importance to know more about its quality and how to get it transported.

◆

MONTREAL HAPPENINGS.

The present week is the week of the autumn millinery openings in Montreal, and the event has attracted many viewers and buyers of the novel headgear to be seen there. Of course the most of these were women. Our correspondent says, writing on Wednesday:"This week has witnessed an unusually large influx of neatly-attired milliners to attend the fall openings. They were in evidence all over the city, but in the leading warehouses they were seen en masse, floors and staircases being fairly jammed with them. Wholesale men express themselves well satisfied with the volume of business done in the circumstances. A goodly number of general dry goods buyers were also in the city from points as far West as Brandon, Manitoba, as well as Eastern people from far Quebec and the Maritime Provinces. Among these, however, there was a manifest disposition to buy carefully, and while a fair aggregate of business was done, no very large individual orders are reported."

The Montreal section of the Canadian Manufacturers' Association held their annual meeting on Monday last. In his address, Mr. C. C. Ballantyne, the retiring chairman, made extended reference to fire insurance matters in the city, and spoke of the Association's plan for forming a mutual company, of which a good deal of talk has been heard already, and to which the Monetary Times referred last week. Another point brought up was in connection with proposed legislation as to compensation to workmen for injuries received in factories, etc. The present law enacts that the person through whose fault or neglect any accident occurs shall bear the responsibility. If the new act becomes law it will mean that employers will become liable even though the accident may have occurred by the employee's own fault. No doubt manufacturers should be compelled to render their machinery as safe as possible, but they become burdened with a heavy load when they are saddled with responsibility for fortuitous events or the imprudence or carelessness of workmen. Far from the bill restricting legislation, Mr. Ballantyne was of opinion that it would largely increase it. With regard to the city's mode of raising money by taxation, which has met with much criticism during the last year or two, manufacturers would not object to pay their just share, but wanted that the whole system should be placed upon an equitable and business-like basis. Another handicap which Montreal manufacturers had to labor under was high-priced gas, for which they thought no good and sufficient reason existed. In the chairman's opinion, the city council ought to consider whether it should not exercise its option to take over the gas plant at a price to be fixed by arbitration, but it should be understood that it could not be operated under municipal management, but given over to some other company. The officers for Montreal branch of the Association for the current year are as follows: Chairman, Mr. C. C. McGill; Vice-Chairman, Lt.-Col. Jeffrey H. Burland; Executive Committee, Messrs. C. C. Ballantyne, J. H. Binks, J. S. N. Dougall, T. J. Drummond, Geo. Esplin, S. W. Ewing, Col. R. Gardner, Chas. B. Gordon, Edgar McDougall, D. Lorne McGibbon, Wm. McMaster, R. Munro, Hon. J. D. Rolland, G. W. Sadler, C. F. Smith, R. R. Stevenson, W. T. Whitehead, P. Williamson.

INTERNATIONAL MERCANTILE AGENCY.

In January of last year, unexpected prominence was given to a pretentious concern, then new, named the International Mercantile Agency, doing business as a guide to credit in the United States and Canada. It had been organized 14th January, 1902. A writ of replevin was issued in New York seven months ago at the instance of R. G. Dun & Co. under which a U. S. marshal found in the premises of the defendant company and took possession of three reference books issued by the Dun Company and illicitly in the possession of the International. This suit of R. G. Dun & Co. is still in progress, and other legal proceedings have since resulted in the appointment of a receiver for the defendant company. Last week an attachment issued from the N. Y. Supreme Court against the same company for $54,220, and interest from the 26th December, 1903, at the suit of Thomas N. McCauley, its former president, who alleges that he loaned this sum to the company during his presidency and has not been paid. "I only took this proceeding against the company," alleges Mr. McCauley, "after I was convinced that its condition was hopeless." He resigned the presidency, it seems, on 1st March last, and has since been down among his orange-groves in far-away climes "where the woodbine twineth." A falling off in the business and heavy expenses are said to have been the causes of its trouble. A deputy sheriff took possession on Friday last of its premises, 346 Broadway, and on the next day, John Enright, of Jersey City, was put in charge as receiver.

Now for the other side of the story. Suit for an accounting has been taken by the International Company against McCauley, the allegation being that a transfer to him of $1,200,000 of the capital stock of $3,000,000 was fraudulent, on the ground that it was made by a board of "dummy" directors. One of these dummies, as we learn from the New York World of 27th August, is alleged to be Kenneth K. McLaren, of the Corporation Trust Co. of New Jersey, who figured in the organization of the Miller 520 per cent. get-rich-quick concern and also in the United States Shipbuilding Company. A charge made against McCauley in the suit for accounting is that he, having charge of its treasury stock, sold large blocks thereof, but instead of delivering treasury shares made deliveries from his own block of $1,200,000 and converted the receipts to his own use. This is a plain charge of breach of trust, and McCauley denies it, blaming his opponents for ruining the company. He also blames Charles A. Henderson, "a young Canadian," third vice-president and an active manager, together with several Canadian directors, for the chaotic state of the company's finances.

A number of prominent Canadians in Montreal and Toronto, and a still larger number not so prominent, in the Eastern provinces are shareholders, it is said, to amounts ranging from $1,000 to $50,000. Some of these are keenly alive to the condition of affairs, but are hardly likely, we should think, after their experience of it thus far, to take kindly to a reorganization of the Canadian end of the concern, such as we are told is contemplated. The complaint lodged by the present management states that McCauley was owner of the Mutual Mercantile Agency and Sprague's Mercantile Agency, of Chicago, New York, Montreal and Toronto, and that these were merged into the International Company. And they say things in their complaint, respecting the repute of the two former concerns and his profitable manipulation of them, that reflect not only upon his unscrupulous cleverness but upon the credulity of people who took stock upon his representations.

Later information, under date 30th August, announces the arrest of McCauley on a charge of larceny. He was locked up, but paroled later in the day, Tuesday, pending the receipt of extradition papers from Hamilton, Ont., where a former stockholder, Mr. C. S. Wilcox, charges him with the larceny of $4,500.

BOARD OF TRADE FOR PRESCOTT.

On the 22nd ult. a number of citizens interested in the growth and prosperity of Prescott, Ont., assembled at the call of Mayor Stephenson and discussed the organization of a live board of trade for that place. All appeared to favor such a scheme and the names were handed in of several prominent merchants who thus signified their desire to become members. The upshot was the appointment of a committee to obtain full information as to necessary steps and report on the matter. This committee will consist of the following gentlemen: Messrs. C. Macpherson, J. Ross, L. H. Daniels, W. I. Purkis and J. D. Mills. The board of trade, when it enters into being, will pay attention to presenting to the outside world the opportunities presented by Prescott as a manufacturing centre.

INCORPORATED ACCOUNTANTS' ORDINANCE (TRANSVAAL.)

Two items of interest to our accountancy readers are to be found in the numbers of "The Incorporated Accountant's Journal," recently to hand. The movement among the forward party of British public accountants, aiming to secure statutory recognition by the British Parliaments of their calling, as a close profession, has received an impetus from the South African branch of the Society of Incorporated Accountants. With a spirit of colonial thoroughness in effacing outworn traditions brought from the Old Country, the Transvaal branch has prepared and promulgated a "Draft Ordinance" for the establishment of a statutory Register of Public Accountants, and the Government Gazette of the colony publishes the notice of intention to apply for a private ordinance during the coming session of the Legislative Council. Briefly, the purposes, as set out, are:

"1. To provide for the registration of persons practising as public accountants in the Transvaal, and for the incorporation of a Society of Accountants with perpetual succession and a common seal. 2. To provide that admission to such society shall be by registration, etc. . . 3. To impose a penalty on any person not so registered, who, after the passing of the ordinance, holds himself out as a public accountant. 4. To create a council to manage the affairs of the society, with power to expel from the society or suspend from the practice of their profession, members guilty of any crime or fraud, or other discreditable conduct. 5. Generally, to make proper provision for securing the attainment of the various matters aforesaid, and of matters incidental thereto."

The copy of the Draft Ordinance deposited with the Government contains twenty-four lengthy sections, regulating the profession, and out of these we extract section 1: "User of Title of Public Accountant Restricted.—After the passing of this ordinance, no person shall describe himself as an accountant, or as a public accountant, or use any name, title, addition or description, or letters indicating that he is an accountant by profession, or a public accountant, whether by advertisement, by description in or at his place of business or residence, by any document or otherwise, unless he is registered as a public accountant in pursuance of this ordinance; provided always that this section shall not prevent any person employed at a salary on accounts and not carrying on business on his own account from describing himself as an accountant in respect of or in relation to his occupation.

Section 15: Title Allowed to Members of the Society.—All persons, whose names appear upon the register, shall be entitled to style themselves Registered Public Accountant, and to place the letters R.P.A. after their names.

"Section 24: Short Title.—This ordinance may be cited for all purposes, as the Society of Accountants' Ordinance, 1904."

In effect, all members of either of the chartered institutes in the United Kingdom and the Incorporated Society of Accountants and Auditors, domiciled in the Transvaal, are eligible for registration, and future applicants belonging to the home-societies will presumably pass a local examination.

There are minor points that the parent society of the Incorporated Accountants might have drafted differently, but the broad spirit is indicated by the editorial comment stating that "the Parliamentary Committee of the Council of the Society at home have unanimously approved of the labors of the committee of the society's Transvaal branch."

If the ordinance should pass into the statutory laws of this important colony, its immediate results will be watched closely in the other commercial centres of the Empire, and perhaps it is well to add the suggestion that reciprocal arrangements between the Canadian Institutes and the Transvaal Society will be framed. All alike are British accountants interested in the growing interchange within the Empire of industrial and financial operations, and any aloofness, similar to that which has been practised within recent years by the English Institute of Chartered Accountants is to be deprecated.

Our other extract of interest is that the London Council of the Incorporated Accountants announces its acceptance of the American Accountants' invitation to the Congress of Accountants to be held at the St. Louis Exposition on September 26th, 27th, and 28th. As the home investor places great faith in the statements and financial opinions of the professional accountants attached to the recognized societies, it is to be hoped the delegates to the St. Louis Congress will be invited to visit Canada on their way home, where they cannot fail but to be impressed with the potentialities of the Dominion.

BANKING AND FINANCIAL ITEMS.

A correspondent who has been enjoying the delights of Prince Edward Island and Cape Breton writes in enthusiastic admiration of the landscape and the summer climate of those favored islands. He says, further: "I admired the people, too. They are friendly—in a cautious sort of way, I must confess, until they are satisfied that you are O.K.—and then they are hospitality itself. There are a great many Scotch people among the population, and I have often heard Gaelic spoken. At least I was told it was Gaelic, for I cannot pretend to any knowledge of that mysterious tongue." The letter reminds us that having to look into Dun's Reference Book the other day the present writer was struck with the preponderance of Scottish names in the town of Inverness, C.B. Out of fifty-two names of firms or persons given as in business there, forty of them are manifestly Scottish, and twenty-five of them are Macs. The manager of the only bank branch in the place, Mr. F. G. D. Cameron, of the Union Bank of Halifax, is also presumably a Scotchman.

Nearly a ton of gold dust was shipped to the assay office at Seattle, via the White Horse, last night, the actual weight of the three boxes being over 1,800 pounds. Two of the boxes containing gold bricks to the value of nearly $300,000 were shipped by the Canadian Bank of Commerce, the third, holding half as much, by the Bank of British North America.—Yukon World.

On repeated occasions we have called attention to the strained and absurd attempts made by Mr. Andrew J. Wilson, of London, England, to damage Canadian credit by decrying in his journal, the Investors' Review, anything and everything Canadian that came under his notice. Canadian railways, Canadian loan companies, Canadian municipalities even, were under his ban. Without proper knowledge, he was persistently "down on" everything Canadian. But such a crank could not be forever successful in his crankiness. We read in the London Review:

"It is painful to reflect that the heroic assailant of the American insurance dragons is reluctantly obliged to admit that his paper—the Investors' Review—is an absolute financial failure. He tells the public that unless they come in to help, it will cease to exist. We have not heard that the columns of the Royal Exchange have fallen yet; the foundations of the Bank of England are still unbroken, and there is no panic on the Stock Exchange. Mr. A. J. Wilson, who is also city editor of the Daily Chronicle, is, we believe, perfectly honest in what he says; but when he comes to insurance, he shows absolute and hopeless ignorance of what he is writing about, and when this is made clearly apparent to the people in this business, they naturally cease to take any interest in that particular paper. Knowledge is not merely power, but it is also money. Without knowledge, it cannot be of any use either to the public or the financial institutions, and it is they, and not the public, who maintain these papers. We cannot realize that members of the general public buy a copy of the Investors' Review, or, for that matter, even the Review itself off a book-stall for the purpose of light reading. That is where Mr. Wilson made a mistake."

Judgment was given on Tuesday last by the official referee of the liquidation proceedings in connection with the winding-up of the Elgin Loan Company. Judge Hughes' judgment dismisses the appeal of the shareholders, who asked to have set aside the order compelling them to pay up their stock to 50 per cent. The claim of the shareholders was that under the by-laws of the company they could not be compelled to pay more than 20 per cent. of the stock. An appeal from the judgment is probable.

When we are told that a gold mine with a capacity of yielding £2,000,000 to £3,000,000 per annum has been discovered in Iwate province, Japan, the news seems very opportune. The mine should help to pay something substantial towards the enormous cost of the Russo-Japanese war.

One day a short time ago a rather elderly gentleman stepped into the main office of the Canadian Thresherman, in the Merchants Bank Building, and requested the privilege of viewing the City of Winnipeg from our windows. After gazing at the now beautiful city for some time, he exclaimed: "What a change! Not one spot remains the same. Everything has been transformed into the nucleus for a western metropolis." Upon questioning him it was found that thirty years ago he camped upon what is now the site of the City of Winnipeg. The change has been indeed great. The broad paved streets were then nothing more than mere trails in the prairie. The hymns of churches, the songs of civilization, and the hum of industry, have replaced the war-cry of the Indian and his weird war-dance. The peaceful kine now graze on pastures then held by the buffalo. A view of Winnipeg to-day can give one no idea of the marvellous growth that has placed it where it is, but when a comparison is made between the city of 1874 and that of 1904, we can indeed exclaim with emotion: What a change!—Canadian Thresherman, Winnipeg.

LIFE ASSURANCE NOTES.

The following tips to agents are from the Insurance Press.

Don't offer more than the policy does. It's good enough.

Talking insurance through a window grating is worse than a kiss through a veil. To be satisfactory, soliciting, like kissing, should be done face to face.

If an agent must have a fad, let it be the collecting of autographs—on the dotted line.

Some men will never own $1,000 in actual cash unless they secure it through an endowment policy.

Where there's a will there's a way. Any man can carry a policy if he is so determined.

When you are buying insurance, don't try to have thrown in with it a free ride on a goat and a purple robe with gilt braid. You may get those things at a lodge, but you can't get genuine insurance there.

The Review, of London, England, has the following to say about the Mutual Reserve: "Mr. Harry Seymour Foster some years ago took out a policy of insurance in the Mutual Reserve on the distinct understanding, as printed in a table of rates, that on any increase of assessment by reason of mortality in any year, the excess should be met from a reserve or emergency fund. In 1898 the assessments were raised. The company having become a level premium company does not affect the case; Mr. Foster's assessments remain on the old plan, and the verbiage of the policy, while keeping a promise to the ear, broke it to the understanding. Mr. Foster has won his action, and the Mutual Reserve Fund is stated by the House of Lords to have been issuing policies that are "tricky." We have always maintained that the verbiage of the policies of the Mutual Reserve Fund, while seeming to be clear, yet conveyed a wrong impression, and now the House of Lords confirms this view. This, combined with the recent action taken by the Canadian Legislature, and also by that of the Colony of Victoria, must act—and that promptly—in accelerating the disappearance from the scene of this extraordinary company.

In a huge country like the United States one may be prepared to hear of a great variety of frauds. But cases in which life companies are swindled or attempted to be swindled by substitution of corpses recur in a way that makes one think the perpetrators of them are willing to run enormous risk. Another disgraceful case is reported. We find the story in two of our American insurance contemporaries: Dr. R. G. Lightle, a prominent physician of Searcey, Ark., who was supposed to have been burned to death in his stable a few months since, has been discovered to be alive, and the companies which paid his insurance to his widow have brought suit to compel her to refund the money. The total amount is some $21,000, of which $11,000 was paid by the New York Life, $2,000 by the Metropolitan, $1,000 by the Mutual Life named Pitts, who died several months before. Pitts' grave was opened and his body found to have been stolen. The latest account says that in the presence of positive proof that her husband is still alive, Mrs. Lightle has refunded the money of New York, and the remainder by fraternal beneficiary societies. The general agent of the Metropolitan became suspicious and began to investigate. Circumstances pointed to the bones found in the barn as being probably those of a man collected from the companies and the proceedings they had taken have been withdrawn. She is acquitted of all complicity in the conspiracy. The friends of the man whose grave was rifled will prosecute those concerned in the outrage.

FIRE INSURANCE ITEMS.

A new powerful fire boat has been delivered by the Merryweather people to East Lincoln, Cape Colony, for the protection of the harbor and shipping.

A sort of diving helmet for firemen is being introduced in the Old Country. By means of this, fed with air, on his head a man can get right into the middle of a warehouse. A Lincoln firm has recently delivered to the Manchester Fire Brigade a novel engine, worked by steam, to supply air and electric light to firemen using smoke helmets.

The secretary of the National Association of Local Fire Insurance Agents, Mr. F .F. Holmes, announces the following as the program committee for the next annual meeting to be held at St. Louis, October 18-21: Arthur H. Robinson, chairman; A. W. Neale, Cleveland; Fred Guenther, Detroit; C. S. Pellet, Chicago; Geo. D. Markham, St. Louis; F. W. Offenhauser, Texarkana; W. B. Flickinger, Erie, and Frank Hanford, Seattle.

It is of interest to learn of the coming celebration of the centennial of the establishment in Canada of the Phœnix Assurance Company, Limited, of London, Engand. The Company was founded in England in 1782 and began business in Canada in 1804. The celebration will take the form of a dinner at the Windsor Hotel, Montreal, 15th September, with Mr. A. T. Paterson in the chair.

Our Manchester letter of August 6th says: The London and Lancashire Fire Office is perhaps in need of no introduction to assurers on your side. It may be remarked, however, that in five years its premium income and its reserve fund have both swelled by more than fifty per cent. Now the directors have agreed upon an additional aggrandisement. Shareholders willing, the London & Lancashire is to swallow the Scottish Employers' Liability & General Insurance of Aberdeen. The latter dates its years from 1881, transacts accident, employers' liability and guarantee business, and in 1903 had an income of £123,965 from premiums and reserve and revenue in hand worth £102,521. A profitable accident department is a three year old feature of the absorbing office.

FOR GROCERS AND PROVISION DEALERS.

Considerable sales have been made in Australia recently of new-pack Canadian canned salmon.

Many reports from various European points serve to indicate that there will be heavy demand over there for all kinds of grain and food-stuffs.

The Anglo-Canadian Cold Storage Company, Limited, Toronto, has been incorporated under an Ontario charter. Its capital stock is $1,500,000. The directors named are Wm. Griffith, mining engineer; Louis Sterne, capitalist; L. W. Just, accountant; James McGregor, all of London, Eng., and A. J. Forward, barrister, Ottawa.

Although it is true that considerable damage was done to the fruit crops in Great Britain during the early part of the season, it is now pointed out that apples will be more abundant there than was thought at first, and that great care should be exercised therefore in shipping this fruit from Canada. Only the highest grades should be shipped.

The Government farm at Ottawa is making experimental shipments of apples to Belfast, Ireland, in the hope of proving that a profitable market can be established there for Canadian fruit. The varieties include Duchess. Each apple is wrapped in tissue paper. Heretofore Canadian apples have been shipped to Ireland via Liverpool, but by sending direct to Belfast it is expected the cost of handling will be reduced and the profit to the shipper correspondingly increased.

DRY GOODS NOTES.

The machinery and plant of the Enterprise Hosiery Company, at Toronto Junction, have been sold to Joseph Simpson & Sons.

The Dominion Cotton and Bleaching Co., Limited, Montreal, which was recently incorporated under Dominion laws, with the object of making, importing, bleaching and dealing in cotton goods of all descriptions will acquire the business and rights and privileges held by Geo. A. Gatehouse and George Bothamely in Drummondville, Que.

S. F. McKinnon & Co., Limited, the well-known Toronto millinery house, are well to the fore this season with laces, for which merchandise each year they send a special expert buyer to the European markets. They are showing at present a large range of laces for millinery and dress trimmings. They are making a specialty of lace curtains.

CLEARING HOUSE FIGURES.

The following are the figures for the Canadian Clearing Houses for the week ended with Thursday, August 25th, 1904, compared with those of the previous week:

	Sept. 1st.	Aug. 25th.
Montreal	$18,726,527	$18,951,923
Toronto	$12,901,620	13,711,231
Winnipeg	4,728,773	4,747,801
Halifax	1,858,517	1,627,164
Hamilton	972,451	1,051,573
St. John	1,032.104	938,093
Vancouver	1,529,016	1,596,509
Victoria	631,709	566,122
Quebec	1,410,266	1,437,383
Ottawa	1,563,172	2,272,981
London	784,200	783,007
Total	$46,138,355	$47,686,787

THE INDUSTRIAL EXHIBITION.

Manufacturers' Building.

Entering the Manufacturers' Building from the north and looking to the right, a striking display of carpets and rugs, made by the Toronto Carpet Mfg. Company, meets the eye. It extends half way across the end of the building and fills besides the little room at the north-west corner. These are very creditable goods in color, pattern and quality. Walking thirty paces across, one finds exposed to the man who approaches along the south aisle the dainty exhibit of John Kay & Son. Boudoir furniture, drawing-room furniture, furniture which is en regle from the point of view of either the French, the English, or the American arbiter of fashion. Artistic hangings are there too, of paper and of silk, lovely carpets and "dreams" of rugs. The little corner bedroom with its Dolly Varden chintz is what the ladies call just sweet.

Raised platforms the full length of this great building at either side and the recessed rooms beyond them are occupied by pianos in unusual number and variety and by organs as well, Bell pianos, Heintzman pianos, Newcombe pianos, Morris pianos, Doherty organs, Bowmanville organs, Uxbridge organs—there must have been twenty different makes at least.

It is to be said that the whole interior of this structure, the color of whose roof, happily unpainted, is mellowed in twelve months, has a more striking and dignified appearance

SAFE AND VAULT WORK

PATENTS, TRADE MARKS, &c., Procured in all Countries. EGERTON R. CASE, Temple Building Toronto, Canada
Agencies,—Ottawa Ont. Washington D. C

this year than before. This is in part because of the greater size of the individual exhibits and in part, perhaps, because more pains has been taken with them. At any rate they seem to harmonize better. There are some strikingly pretty ones among them. At the left of the entrance, John Taylor & Co.'s Valley Violet Perfume and Violet Toilet Water, with many other products of this house, are shown in an artistic structure where green and purple are the colors which predominate. Mr. Percy Taylor has made an excellent use of raffia and decorative paper in green and purple, in this little temple, and a perfume fountain tinkles within. Just next this booth, and making pretty contrast with it, is Armour's exhibit in yellow and white with numerous shelves and cornucopias. Beside Heinz's remarkable structure and towering above it is the gigantic "Kin-Hee" tea and coffee pot of the Eby, Blain Co., who show many packages of their Kolona tea and Empress coffee. A capital exhibit, further south, is that of MacLaren's Imperial Cheese, well arranged and daintily colored; and across the aisle from it the neat pavilion of the Ontario Wire and Lead Works, full of metal baths, closets, shower-baths in lovely white marble and bright metal. As if to make a foil to this, the National Register Co. has hung its place in black velvet and gold, as dark as the other is light.

Some Montreal exhibits near the east end of the building merit notice. For example, the Canadian Aluminum Works Ltd., who show cooking utensils and table-ware, lamp-shades, tea-kettles, match safes, cleats for yachts, and a great variety of other goods, made of this light and pretty but strong metal. L. H. Packard's booth, to exploit his shoe dressings, is decorated in black and yellow, while near this, Leeming, Miles & Co. display their druggists' sundries. The Dunlop Tire Co. has a horse-shoe shaped tent or booth or hiding-place of blue and white bunting. We are glad to find near by also, the display made by Black Bros. & Co. of Halifax, consisting of "Acadia" boneless codfish, Halifax brand for fish cakes, and "Bluenose" Codfish put up in one and two pound bricks. A skillful use of variegated muslin appears in the ceiling of the booth occupied by the Pure Gold Co., who show their flavoring extracts, condiments, coffees, and baking-powders. Next door to the cash registers one may see the Dayton Computing Scale, which the gentleman in charge proudly explains will compute by machinery and promptly give you an answer in either L. S. D. or dollars and cents. To any business man the exhibit of the Office Specialty Co. will commend itself. Framed in solid oak pillars, the miniature house shelters a great variety of those indispensables of a modern counting room—cabinets, desk conveniences, safe boxes, files, accordion envelopes. It has openings on two aisles and will well repay a visit inside. A large space is devoted to the products of the Canada Furniture Manfrs., Ltd., towards the east end. This extensive organization must enhance the reputation of the Dominion abroad by the fine specimens of furniture it makes and exports. The Globe-Wernicke Co., of Stratford, have a very fine display of their Upright Unit Vertical File system for letters, documents, etc. The workmanship of these is capital. An ample space, in imitation of a four-sided lofty colonnade is used to show the varied products of the Metallic Roofing Co.—its ceilings, cornices, shingles and ornaments. Both inside and out this is one of the most admirable of the many exhibits in this enticing building.

Skilful arrangement is needed to display to advantage the numerous kinds of biscuits, cakes, and confections made by the Christie, Brown & Co. factory. There are between four and five hundred sorts in this temple of toothsome dainties, and it seems, to look at them on the shelves, as if there were a thousand. For over fifty years this well known concern has been producing biscuits and for twenty years exhibiting them at the Toronto Fair, and the exhibit seems to grow from year to year.

One of the central cross aisles contains some half score temples or booths or tents devoted to showing food-stuffs Oats, maize, wheat, in forms it would take an American dyspeptic to recognize, tempt the eye and invite the tongue. Chocolate, cocoa, corn starch, cream cheese, alternate with ale, beer, wine, and even aerated *water*, until we begin to look for J. S. Hamilton's L'Empereur champagne and Essex grape-juice. But one looks in vain, for the Major's exhibit is not to be found.

Puzzled to discover what constitutes the flooring of the Gutta Percha Company's exhibit of Maltese Cross belting and fire hose, a bystander gets on his knees and pulls up a corner of it. What does it prove to be but rubber tiling, in red, white and black! Arabesque, star-shaped or maple-leaf shaped fragments interlaced, the size of a baby's hand, forming a pretty pattern and reminding one of the toy lessons in geography of long ago, consisting of thin wooden blocks or disks sawn the shape of counties in a state or the shires of the British Islands, to be put together to form a country. This is no toy, however, but a substantial imitation in vulcanized rubber of Minton tiles.

The booth containing Cowan's cocoa is resplendent with flowers, reflected by a huge mirror. It may be assumed that later in the week the palatable productions of this firm will be served to the passers-by at the hands of civil young women, as aforetime. The Edwardsburg Starch Company has a fine display.

A huge showcase, enclosed in a neat structure of oak, serves to display the tasteful exhibit of Japanese mattings of engaging colors and unusual patterns, dress silks, handkerchiefs, Japan taffeta and crepe du Japon by K. Ishikawa & Co., of Yokohama and Toronto. Nor must we forget our old friend Alonzo Spooner, whose Copperine and Nicolumium lubricators, metallic packing, and Phenyle disinfectant appear in their red and green boxes as of yore.

Manufacturers' Annex.

A separate building near the entrance, called the Manufacturers' Annex, contains among other things, a two-story structure, the lower part all timber and metal, the upper surrounded with royal blue and pale blue muslin, where Mr. Frederick L. H. Sims or Mr. Arnett will make known to any civil caller the marvels of the Siche Gas Machine. At the south end is a pretty display of pictures, signs and novelties by the Cranston Novelty Co., now of Galt, but presently to remove to Bay Street, Toronto.

An interesting exhibit is that of the Victor Safe and Lock Co. Interesting because it shows a small safe which was in the hottest part of the fire of April 19th, in our city, and fell from an upper flat to the basement of the Westwood Building. The handle of the safe was broken off but the combination worked all right and the contents were found in good condition. Most beautiful specimens of art furniture are shown by the Rogers Furniture Co., the inlaid pieces being particularly pleasing and artistic in design. The Adams Furniture Co. show a superior line of sectional book cases, president's desk, roll top desks in both golden and Flemish oak. The United Typewriter Co. have a most strategical stand on a corner where a cleverly arranged display of Underwood and Empire typewriters is made.

Administration Building.

It was a disappointment that the new Administration Building, for the use of the Association's officers, was not completed. But unfinished as it is, and damp also we should think, it is occupied, and its greater space and more convenient arrangement are a very marked improvement over the officers' old quarters. When finished, it will be a worthy companion to the other handsome and substantial structures of 1903 and 1904 which have so much helped to transform the appearance of the grounds and to give satisfaction to exhibitors. The counter railings and cashiers' cages, made, we understand, by the George B. Meadows Iron & Brass Works, are of plain design and substantial make.

MANCHESTER LETTER.

The request of the Board of Trade for the Maritime Provinces has been cabled here in brief. From the message, it appears to be the desire of this body to restrict the Preference given by Canada to goods imported direct from British ports. It is assumed that the resolution aims at shipment over New York and elsewhere into the Dominion. But its terms support an additional construction. If, for instance, vessels clearing from our Eastern sea-board are to be debarred from completing loading at Continental ports before turning West, the proposal would not be popular on this side. Perhaps that eventuality was not in the minds of those who petitioned your Government. The inclination of the Board to promote the interests of its own members is well understood. People here who are interested in Canadian shipments protest that the embargo upon transportation from the South would not be to the advantage of the Dominion as a whole. The relatively few who take serious account of items of Colonial news are beginning to remark on the fidgetiness of your traders. "Commercial repose" is a phrase that has been bandied about roughly during our fiscal campaign, yet settled conditions have their advantages in the world of business.

Friends of the Monetary Times may be unaware of the extent to which its news and opinions are cited in this country. Our Governmental Weekly, "The Board of Trade Journal," frequently quotes from its columns scraps of intelligence concerning contracts forthcoming and the like. Some of the more influential trade journals in Great Britain are also in the way of utilizing this paper as a source of reliable matter. This information may perhaps supply clues to the enquiries from remote quarters that announcements in these columns bring to hand.

From the annual report of our Postmaster-General one infers that the cash-on-delivery system applied to postal packets is to be introduced in Great Britain. Retail traders had been congratulating themselves prematurely on the success of their angry demonstrations against the proposal. Provincial traders see in it nothing but injury to themselves and gain to the mail-order advertisers, and their organizations have fulminated against C.O.D. with exceeding vigour. Their feelings will doubtless find a sympathetic echo in rural Canada. Established nationally, C.O.D. must eventually become international in its scope and some people do not view that prospect with undiluted joy. Fake advertisements from the Eastern States are already unpleasantly obtrusive in our popular magazines and no scheme to make foreign swindling safe and easy ought to be encouraged. No doubt South Germany will find the cash system useful in disposing of its sometimes meretricious knick-knacks to English people. Whether Canada can use a C.O.D. post to advantage in trade with the Homeland it is for Colonial business men to decide.

As the existence of Local Boards of insurance directors appears to interest your public, I recite some information given to me by a high official of a first-class Scottish company. A British office of somewhat freakish constitution, a concern that assumes a perilously high rate of interest and works at an excessive cost, laid siege to one of our Northern cities. Fully-paid policies written for £5,000 a piece were distributed gratis to half a dozen men of local eminence. Assurers were led to believe that the company must be a sound one in which gentlemen so shrewd were investors. Perhaps the strategem paid the promoters. One cannot be sure. But when the truth oozed out concerning the creation of the local "directors," the concern found business materially harder to get. There can be no two opinions among sensible men as to the company that stoops to so flagrant a deceit.

Some remarks of Professor James Mavor's, made at Winnipeg, have got into our Press. Doubtless his official report to the British Board of Trade will command wider attention. His advice, there is no need to detail here. It has a sound and impartial air and ought to be a valuable contribution to English knowledge of Canadian settling. One does not exaggerate at all in saying that thousands of our people follow with acute interest all intimate news about your squatters. Many drink the information in because of its bearing upon the interests of friends already in the Dominion. A very large number of the young, in especial, look upon emigration to Canada as a possibility for themselves. An indefinite hankering for a new land may excite them for years. Some of them at length do migrate and more of them do not. Canada and South Africa are pre-eminently the two Colonies that throw a magical spell over the imaginative and restless. An editor in England may at any time have an endless controversy in his correspondence columns over the merits or demerits of Canada as a home. For we are favored with the opinions of the disgruntled and the ne'er-do-weel as well as those of the happy and prosperous squatter.

NORTH-COUNTRY.

August 19th.

THE BRITISH COLUMBIA SALMON PACK.

Late reports from the Skeena river say that the weather has improved and the run increased considerably. The following estimate of the catch seems to be the most authentic to hand: Sockeyes, 80,360; spring, 18,580; cohoes, 2,763; humpbacks, 8,503. Canneries on the river are expected to be at work for some weeks yet, as the run came later than usual this year. A notable feature this season has been the exceptionally small run of humpbacks, and spring salmon on the other hand have been unusually plentiful. On the Fraser river the pack reported up to end of last week was 66,616 cases, which is not half as great as the pack on August 15th last year, when no less than 137,455 cases had been put up. The total pack on the Fraser last year was 237,125 cases, as against 327,095 cases in 1902, and 990,252 cases in 1901. This year Fraser river canners are said to class the pack on that river as practically a failure.

UNITED STATES COAL ABROAD.

In an article on Competitive Coal Markets, by Henry S. Fleming, in the July number of the Mining Magazine, which has taken over the Pacific Coast Miner, the writer shows how remarkable has been the increase in ten years of the quantity of United States bituminous coal marketed abroad. In the year 1893, only 1,773,556 tons of soft coal was exported from the States, while the quantity so exported in 1903 was 5,210,000 tons. And it is not alone to Canada that shipments have grown. Says the writer: "In 1902 our total exports of anthracite coal were 1,570,490 tons, of which 1,502,372 tons were shipped into Canada. The total exports in 1903 were 1,388,653 tons, of which 1,369,376 tons were sent to Canada. Our total exports of bituminous coal in 1902 were 5,400,694 tons, of which 3,335,820 tons went into Canada (3,250,000 tons all-rail over the border between Ohio and Vermont); 450,000 tons to Europe; 205,000 tons to South America, and 561,000 tons to Mexico and Central America. In 1903 our total exports of bituminous coal were 5,210,000 tons, of which 3,692,000 went into Canada, most of it by the northern border; about 70,000 tons to Europe, 110,000 tons to South America and 665,000 tons to Mexico and Central America."

ANSWERS TO ENQUIRERS.

Enquirer, Hamilton.—The rates adopted for annuities by several of the prominent American life companies in the year 1898 were as under. At say age 58, for a yearly annuity of $100, there would have to be paid in $1,136 if the applicant be a man, and $1,264 if a woman. Thus an annuity of $500 a year for life would cost you $5,680. Several Canadian life companies will sell you an annuity at practically the same rates.

Mercantile Summary.

A letter from Nelson, B.C., tells us something about the Fair at that place. More exhibits have been offered already than can be accommodated, so the managers say. A bench show of dogs is one of the features, a poultry show, another. The display of minerals is sure to be an uncommonly interesting one, as the chief executive officers of the Fair are taking a personal interest in it. A new main building is being erected.

The Nelson News says that there is on exhibition at the Ashdown Hardware Company's store an article made in Nelson which is claimed to be the best of its kind in the market in that district. This is an ore car made by the Kootenay Engineering Works. It holds 16 cubic feet of ore, is made with self-oiling, dust-proof axles, and has one feature entirely new. This is a device for dumping and closing, which is entirely free from the various defects, which have marred cars of other manufacture.

From Nova Scotia the following recent failures in the retail trade are reported: S. Feinberg, of Sydney, formerly a peddler, and the past year or two keeping a small clothing store, is offering 25 per cent.——N. R. McLeod, provision dealer, of the same town, is asking an extension on liabilities estimated at $5,000.——O. N. Feltmate, a small trader, at Inverness, C.B., has assigned to G. O. Forsyth.——The dry goods stock of W. H. Buck, at Truro, has been attached under a chattel mortgage held by a Montreal house who assisted him when making a compromise at 50 cents some eighteen months ago.

Recent failures in Montreal are mostly of a minor character, and are noted as follows: E. Desy, a grocer in a small way, has assigned, owing $1,550.——W. Rutenberg & Co., cheap clothiers, are reported insolvent. Rutenberg has been selling goods here about twenty years, but with a very limited measure of success, and has done business of late years under cover of his wife's, and again his daughter's name.——Isabella Muir, milliner, recently sold out her business for $2,000, it is said, and then approached creditors with an offer of 25 per cent. on liabilities of about $2,500. The views of Isabella and her creditors did not seem to harmonize, however, and she has been requested to assign.——Mrs. J. Robinson, following the same line of business, has assigned, and is said to owe $1,000.——J. E. Patenaude, formerly associated with the old established retail dry goods concern of P. Lafrance & Co., who started out on his own account a year or so ago, buying a bankrupt stock at 49½ cents on the dollar, has become embarrassed, and has put his affairs in the hands of an assignee.——A winding-up order has been issued in the matter of the Sheffield Cutlery Co., Limited, a concern which was incorporated in 1898, with an authorized capital of $10,000.

Mercantile Summary.

Work has been begun on the Canadian Pacific stock yards, at Moose Jaw, which, when completed, will be among the largest in the West, having accommodation for 1,800 head of cattle.

The International Roller Bearing Company, Limited, has been incorporated under Brtitsh Columbia laws; capital, $125,000. It will purchase, we understand, the patents granted to John Kincaid, inventor of roller bearings.

The directors of the Canadian Pacific Railway will ask the Government to authorize an issue of new common stock to the amount of $25,500,000. Presumably, the money is required for extensions in the West. The C.P.R.'s capital stock at the present time is $84,000,000.

The Canada Rolling Stock Company, Limited, Toronto, has received a charter from the Dominion Government. Its capital stock is placed at $250,000, and it will manufacture and deal in locomotives, cars, and rolling stock of all kinds. Messrs. N. Curry and N. A. Rhodes, of Amherst, N.S., are prominent members.

A large deposit of tin-bearing ore is reported to have been discovered in Eastern Manitoba, near Cross Lake, not far from the Ontario boundary. If true, the discovery is of great importance, there being, as yet, no known body of tin ore in the Dominion, and practically the same in the United States.

The Montreal Smallwares Company, Limited, capital stock, $100,000, has received a Dominion charter. It will manufacture and deal in all kinds of pins, needles, tools, buttons and other articles connected with wearing apparel. Among the charter members are: W. R. Willetts, of Waterbury, Conn., and H. and J. Baudry, of Montreal.

The new coal company, of which Rufus Pope, of Cookshire, is at the head, has purchased some 2,000 acres of coal land a mile or two outside Frank, Alta., and is now engaged in developing the property. It is said to possess eight seams of coal varying in thickness from 6 to 20 ft. A short branch line will be built to connect the land with the Crow's Nest Pass line.

The Associated Silver-Lead Mines of British Columbia held its annual meeting at Sandon last month, and was well attended. The retiring president spoke of what had been accomplished for Kootenay by the efforts of the association, and reminded his hearers of what had resulted from the revival of the lead-mining industry largely through the efforts of this body. Officers were elected as under: President, Alfred C. Garde; vice-presidents, James Cronin, W. S. Drewry, W. S. Jenkins, William Hunter, and George Alexander; executive committee: Messrs. John L. Retallack, George D. Potter, Norman Carmichael, Louis Pratt, W. E. Zwickey, H. Giegerich and N. J. Cavanaugh; treasurer, Oscar V. White; secretary, N. J. Cavanaugh.

The Whaley Automatic Smoke Preventer and Fuel Saver Co., Toronto, has received an Ontario charter. Its capital is placed at $125,000. Among the directors are: J. T. Eastwood and E. E. Wallace, Toronto.

Mr. James Patton, who died last week in Montreal at the residence of his son, Dr. H. M. Patton, of Sherbrooke street, had a long business career in Canada. As a young man, after he came from the North of Ireland, he was in the wholesale crockery business in Toronto with his father, but for more than sixty years he resided in Montreal, where he was identified with the wholesale houses of Mathewson & Patton, and George Childs & Co., wholesale grocers. Unobtrusive in his manner, Mr. Patton was a conscientious man, unwearied in doing good; working at the hospital, where for fifteen years he was secretary to the committee of management, working in the Methodist church, teaching Sunday school, and identified with charities always. He leaves a widow and five sons. Mr. James A. Mathewson, of McGill street, is his brother-in-law.

—It is good news for Canadians that Mr. Robert Beith, of Bowmanville, Ont., who has taken honors in hackney horses for two years in succession at Madison Square Gardens, New York, and at the World's Fair, in Chicago, with the horse "Jubilee," again takes honors, this time at the St. Louis Exposition, with the horse "Saxon." He carries off the first prize in the hackney class, and several other prizes at the Louisiana Purchase Exhibition. Such a succession of victories is greatly to the credit of this enterprising Canadian.

Therefore, our aim is to give the most thorough training in every detail of our different courses. The Dominion Business College, Limited, Toronto, Ont. Get our booklet.

Mercantile Summary

Khalil Sharpit, a Syrian doing a small store business at Portage, P.E.I., is asking a general extension of time.

The British Columbia Box Company, Limited, has received a provincial charter empowering it to manufacture and deal in boxes, packing cases, etc.

On Wednesday of last week fire broke out in the Imperial Paper Mills, at Sturgeon Falls, and destroyed the bark room and conveyor to the boiler room, before it could, with great difficulty, be extinguished. The loss is covered by insurance.

As an illustration, not only of the manner in which the Western Metropolis is growing, but of the prosperity of the Canadian working man, it is to be noted that a number of C.P.R. shop employees, at Winnipeg, are buying up a whole block of lots for themselves in order to keep the neighborhood respectable both with regard to the class of residents and standard of buildings. Each man is securing a lot 50 by 100 feet, and some of them will build this fall and others as soon as their work requires them to live in that locality. The houses will be of a good class, it being the intention of a number of the men to use hollow cement blocks. In consequence of this move of the men it is said a lively demand has been created for business sites near by, say Bannatyne and Logan avenues.

We are advised by John Mackay & Co., trustees, etc., 25 King street West, Toronto, that an assignment has been made by Henry Adams, of the village of Embro, Ont., physician and proprietor of the Embro Flax Mills, carrying on business as a manufacturer at Woodstock, Ont., under the name and style of the Marble-Swift Automobile Co. of Canada, to John Mackay, of Toronto, for the general benefit of his creditors. A meeting of his creditors was appointed at the Queen's Hotel, Toronto, on the 5th September, 1904, at 2.30 p.m., to receive a statement of affairs, to appoint inspectors, etc. Mr. Mackay gives a very clear resumé of the causes of trouble in Mr. Adams' case. He launched out without experience in manufacturing and other industrial operations without having made adequate provision for cash capital, and on account of initial experimental losses and delays, "an accumulation of unsatisfied liabilities to a large number of creditors resulted by successive stages in the contraction, withdrawal and finally in the destruction of credit." Eventually, an assignment became necessary. The assets consist shortly of the stock-in-trade and manufacturing equipment of the automobile company at Woodstock and the flax mills at Embro; certain real estate situate in Embro, Woodstock, and the State of Texas, chattels and book debts, mortgages and $220,000 per value of capital stock in an Ontario manufacturing corporation. The book value of the various assets is probably $250,000. The realization value an unknown quantity. The liabilities, including mortgages on real estate, are in the region of $45,000.

NOT D. McLACHLAN OF CHATHAM.

Mr. D. McLachlan, principal of the Canada Business College, asks us to bring before our readers the fact that he has no connection with any other business college in Canada. His reason for asking us to mention this is, that a person of the same name is advertised as associate principal of another college, and as the public might be led to believe that he is the party whose name appears in connection with the institution referred to, he would like the fact brought to our readers' notice. Mr. McLachlan founded the college over which he so ably presides, nearly 28 years ago, and it stands to-day as one of the leading commercial institutions of the continent. He has no connection with any other business school in Canada or the United States, except the McLachlan Business University, of Grand Rapids, Mich., these two institutions being owned and controlled by D. McLachlan & Co., and is to-day the only business school in Canada that has been running for 28 years without change of management. Mr. McLachlan is conducting a high class business school at Chatham, a school which has made a reputation much wider than the continent, and we take pleasure in giving the above facts publicity.

Opening Day

In Business Colleges and other Educational Institutions, is almost at hand. We have a few remarks to make to the many young people who very soon will be entering technical training schools in preparation for stenographic work, in which there are exceptional opportunities. Our remarks will be of interest to the business man as well.

Select the School

Which is prepared to qualify you to meet present day business requirements. All schools are not in accord with the modern methods. Some are just where they were ten years ago. This is particularly true in regard to Typewriting. Ten years ago all the Typewriters in use in this city were of the old style "blind" varieties. Then the ***UNDERWOOD,*** the ***Visible Writing*** Machine was introduced. ***To-day more UNDERWOODS*** are sold in Toronto than all other makes combined.

The business of the day demands ***Visible Writing.*** It means double the amount of better work. Skilful operators are required. This necessitates Touch Writing; a scientific mode of operation. Touch Writing can be learned on the ***UNDERWOODS*** in much less time than on any other. Have you observed how often the operator of an old style machine stops to raise the carriage and verify the work? Time wasted.

See that the School You Choose

Uses the ***UNDERWOOD.*** "Blind" machines are not just as good. They are fully 25 per cent. slower. ***Remember you do the paying.*** The following schools in Toronto use ***UNDERWOOD*** Machines:—The Central Business College, Mrs. Wells' Business College, The Kennedy Shorthand School, The British American Business College, The Canadian Shorthand School, The National Business College, St. Michael's College, Technical School, Loretto Abbey, De la Salle Institute, the Separate Schools, Loretto Academy, The Canadian Correspondence School, the Home Correspondence Schools, The International Correspondence Schools.

Underwood

Operators are always in demand, because ***More UNDERWOODS*** are in use than all other makes combined.

Mercantile Summary.

On an unpretending slip of paper the size of an ordinary envelope, having on one side a picture representing "Winnipeg, the buckle of the wheat belt—the Telegram, the tongue of the buckle," is a map of the aforesaid wheat belt, and an array of statistics which show the wonderful growth of Manitoba. For these we thank the Winnipeg Telegram. A gentleman who left the capital of Manitoba on Saturday last tells us something of the scale on which the T. Eaton Company is building in that city. On Portage Ave., opposite the Clarendon Hotel and beyond, they have bought a great tract of land. Upon part of this, say 266 feet on Portage Ave., and 150 feet on a side street, they will build a six-story store. Upon land adjoining, they purpose erecting plants for heating, lighting and water supply. Excavations have been already made for the store, whose walls are being laid.

Upon demand, an assignment has been made by A. R. Magnan & Co., dry goods dealers at Sorel, Que. Mr. Magnan was formerly of Magnan & Frere, who became insolvent a year or so ago, the failure causing a good deal of criticism, and he has since done business in his wife's name.—Arthur and Thomas Morin, doing a small jobbing business in liquors, at Valleyfield, Que., under the style of A. Morin & Co., are insolvent. They are said to show assets of $1,400, with liabilities footing up to $3,600.——Alexander Hamel, keeping a small grocery at Ancienne Lorette, Que., has failed, after a two years' experience of business.——A young farmer in the Saguenay country of Quebec, S. Fortin, by name, took to storekeeping two or three years ago, at Hebertville, and is now in the hands of the assignee. Being recently sued by a couple of his creditors, he offered them 50c. on the dollar, but it has apparently been thought desirable that he should assign for the benefit of all concerned.——Simeon Lemay, of Victoriaville, Que., formerly a grocer, but latterly in the hotel line, has assigned. His estate is described as a very bad one, it being reported that he owes $10,180, while available assets are only a few hundred dollars.——J. F. C. Martel, in a limited grocery way at St. Romuald, opposite Quebec, has assigned to V. E. Paradis, of that city.

ELECTRICAL ENGINEERS VISIT MONTREAL.

On Wednesday, and Thursday next, electrical engineers from Great Britain, Germany, France, United States and Italy will visit Montreal. The list of intending visitors shows that they are among the most distinguished electricians in the world. They are to be entertained in Montreal for two days, the city authorities and a large local committee uniting for the purpose. Lachine Rapids and Shawinigan Falls are among the sights they will see.

Toronto, Aug. 24th, 1904.

Dear Sirs:—

We deeply regret that we have had the extreme misfortune of being again visited by the ravages of fire which occurred in our temporary warehouse, "Queen City Rink," on Sunday night, 21st inst. We felt pleasure in having such a unique warehouse, so convenient and completely stocked with new and up-to-date goods.

We are glad that our factory is still intact, which enables us to fill all orders for manufactured goods as usual. Our Leather Goods Works are also undisturbed and in full working order.

With many thanks for past favors, and trusting very soon to be in a position to fill all orders, which shall have our very best attention, and hoping for the patience and co-operation of our friends,

Respectfully Yours,

BROWN BROS.,
LIMITED.

School Debentures FOR SALE.

The Town of Rainy River is offering for sale $25,000 school debentures, bearing 5 per cent. interest, repayable in thirty equal annual payments of $1,626.29 each, the first dated July 19, 1904.

The present bonded debt of the town is $1,500; the assessment for 1904 is $386,515; the population is 2,000. For any further particulars apply to

A. E. MARK, Sec.-Treas.
Rainy River, Aug. 18, 1904.

Debentures For Sale.

The undersigned is prepared to receive offers for the purchase of debentures of "The Southern Judicial District" in the Province of Manitoba to the amount of $40,000, and issued under the provision of Chapter 55, 3-4 Edward VII., intituled "An Act to provide for the erection of Judicial Buildings for the Southern Judicial District and Equipping the same," such debentures to be in denominations of not less than $500 each, payable on the FIRST DAY OF JANUARY, A.D., 1940, and bearing interest at a rate not exceeding four per centum per annum, payable half-yearly on the FIRST DAY OF JULY AND JANUARY; said debentures both as to principal and interest to be made payable at any place in Great Britain or Canada, either in Sterling money or in the currency of the Dominion of Canada.

All offers must be addressed to the undersigned and marked "Tender for Southern Judicial District Debentures" and must reach this office NOT LATER THAN SATURDAY, THE TENTH DAY OF SEPTEMBER, A D., 1904.

Delivery of debentures to be made in Winnipeg.

JOHN H. AGNEW,
Provincial Treasurer.

Provincial Treasurer's Office,
Winnipeg, Man., Aug. 12, 1904.

There will be about thirty Americans in the party, seventy-five from Great Britain and Ireland, and forty-two from Italy, while France, Germany, and other European countries will be represented. Following are the names of prominent visiting members of the Institution of Electrical Engineers of Great Britain: Gray, R. Kaye, president; Crompton, Col. R. E., past president; Perry, Prof. John, past president; Hammond, R., hon. treasurer; Lloyd, G. C., secretary; Baily, Francis G.; Balfour, G.; Ball, R. S.; Dr. Glazebrook; Blair, G. Conrad; Connolly, John T.; Cormack, Prof. J. D.; Crawshaw, C. B.; Dick, J. R.; Ruddell, W.; Erskine, R.S.; Fawcus, W. P. J.; Feilden, Theo.; Foster, J. A.; Geipel, W.; Harris, W. A.; Hawkins, Charles C.; Hayashi, M.; Hesketh, Thomas; Hope-Jones, F.; Jennison, M.; Kidman, F. C.; Liebert, Emil H.; Long, F. M.; Longbottom, Benjamin; Pope, Godfrey; Tree, R.; Wills, Flolliott; Scott, E. K., and as many more, whom we have not space to mention. A reception will be given in the Engineering building of McGill University. The visitors will leave on Thursday for Niagara Falls.

◆

FRENZIED FINANCE.

The disregard of law and of right by wealthy corporations, their squeezing of money out of the public, and their exemption from punishment, is the subject of a series of articles under the above heading by Thomas W. Lawson, of Boston, of which the first appeared in the July issue of Everybody's Magazine. The general tenor of these articles is to be inferred from the following extracts from the first of them:

"There will be set down, in the series of articles of which this is the foreword, in as simple and direct a fashion as I can write it, the story of Amalgamated Copper and of the 'system' of which it is the most flagrant example. This system is a process or a device for the incubation of wealth from the people's savings in the banks, trust, and insurance companies, and the public funds. Through its workings during the last twenty years there has grown up in this country a set of colossal corporations in which unmeasured success and continued immunity from punishment have bred an insolent disregard of law, of common morality, and of public and private right, together with a grim determination to hold on to, at all hazards, the great possesions they have gulped or captured. It is all the same 'system' which has taken from the millions of our people billions of dollars, and given them over to a score or two of men with power to use and enjoy them as absolutely as though these billions had been earned dollar by dollar by the labor of their bodies and minds. Yet in telling the story of Amalgamated, the most brazen and voracious maw of this 'system,' I desire it understood that I take no issue with men; it is with a principle I am concerned. . . . . .

"The enormous losses, millions upon millions—to my personal knowledge over a hundred millions of dollars—which were

made because of Amalgamated; the large number of suicides—to my personal knowledge more than thirty—which were directly caused by Amalgamated; the large number of previously reputable citizens who were made prison convicts—to my personal knowledge over twenty—directly because of Amalgamated, were caused by acts of this 'system' of which Henry H. Rogers and his immediate associates were the direct administrators, and yet Mr. Rogers and his immediate associates, while those great wrongs were occurring, led social lives which, measured by the most rigid yard stick of mental or moral rectitude, were as near perfect as it is possible for human lives to be.

Portraits are given with this article of Mr. Henry H. Rogers, who is styled the piston-rod of the Standard Oil Engine; of William Rockefeller, the fly-wheel of the same, and of the author, who styles himself, "A plain stoker, who shovels in coal and draws out ashes." The curious thing about this foreword is the frankness with which the author admits that he did a lot of the work of the company; that he was "unwittingly made the instrument by which thousands of investors in America and in Europe have been plundered," and the language in which he declares Rogers and his associates to have been exemplary husbands, fathers, sons and friends, charming people, full of sentiment and sympathy, during all the period in which the system of which they were the authors and workers was doing its deadly and disgraceful work.

◆

Terrible forest fires have been raging for weeks past in Newfoundland. Several hamlets have been demolished, and it is calculated that at least $20,000,000 worth of marketable timber has already gone up in smoke this season.

◆

—These are the days of cheap ocean travel, On Friday last, the American line gave notice that it would carry steerage passengers from Liverpool to Boston for $8.75, which is a reduction from the $12.25 rate previously announced. On the next day, the Cunard Line announced that they would accept $60 for saloon rates across the ocean on certain of the steamers, and fifty on others. For second cabin accommodation they accept on Campania, and Lucania, $40, on the other ships $30, per passenger. Later came the announcement from New York, of a further reduction in trans-Atlantic passenger rates. The American Line, (the "St. Louis" and "St. Paul", etc.,) has fixed $55 for first cabin passage; $35 for second cabin fares; with $30 for second-class fare from Philadelphia to Liverpool. The Leyland Line, which is controlled by the International Mercantile Marine Company, announce a rate of $35 for first-class tickets from Boston to Liverpool. The Allan-State Line prices from New York to Glasgow, are stated at $40 for first cabin passengers, and $27.50 for second cabin passengers.

MONTREAL MARKETS.

Montreal, 31st Aug., 1904.

Ashes.—There is nothing coming forward of any consequence, but the present demand is slow, and quotations are easier, $5.65 to $5.70 being about the figure for first pots, and $5.30 for seconds. In pearls there is still an entire absence of business.

Dairy Products.—The shipments of cheese from this port last week were 78,972 boxes, figures approximately equal to those of the corresponding week of 1903. The total exports for the season, thus far, are 1,075,503 boxes, which is 374,063 boxes behind this date a year ago. Of butter there were exported last week 18,460 packages, an increase of 3,379 on the corresponding week last year. Since last writing, there has been quite a marked advance in the local cheese market, which has apparently checked British demand. We quote finest Ontarios at 9c.; Townships, 8¾ to 8⅞c.; Quebecs, 8½ to 8¾c.; per lb. Butter is rather easier than a week ago, 19c. being now about the limit for finest Townships, with medium grades ranging down to 17½c.; dairy, 14 to 14½c. per pound.

Dry Goods.—A busy week in this line is caused by the millinery openings, many buyers having come to town to attend them. A considerable proportion of the commercial travellers are home off the road, having their samples revised, and in general business there is no "rush.' 'Remittances from the country keep up fairly well. Under date 30th August, the Penman Mfg. Co., of Paris, advise an advance in all lines of half-hose. The Colonial Bleaching and Printing Co. have issued a new list for spring of 1905, showing about a 5 per cent. advance in prints, etc.

Groceries.—The sugar market remains stationary, local refiners still quoting standard granulated at $4.60, with soft grades ranging upwards from $4. Tea importers still report but a light demand from jobbers, and there is no special strength to the market. The "Escalona," which is the first direct fruit steamer from the Mediterranean, is now completing lading her currant cargo at Patras, Greece, whence she sails on Sept. 2nd for Denia, Spain, for her supplement of Valencia raisins. Late cables regarding currants advise an easier market, with present quotations for fine Filiatras at 13s. 9d. First shipments of new Valencias have been made, via Liverpool, at 19s. for fine offstalk, and it is hardly expected that goods for shipment by the "Escalona" will be obtainable at much lower figures, as the crop is said to be turning out smaller than first calculated. California raisins are being quoted at comparatively easy prices. Filberts, Tarragona almonds, and shelled walnuts are all firmer. A syndicate is reported in evaporated apples, the price for new pack being quoted at 6c. in round lots, f.o.b. White beans show strong advance, being quoted at $1.20 to $1.30, as to grade.

Hides.—An advance in lambskins is momentarily expected to 65 or probably 70c. each. Apart from this, there is nothing particularly new in this line of trade at present. Tanners are buying beef hides quite readily, and there is very little stock of them in store. Dealers continue buying on the basis of 9c. per lb. for No. 1, and quote the usual half-cent advance to tanners.

Metals and Hardware.—No special activity has developed in these lines as yet, nor are there any very notable changes in values. Following the decline in barb wire, noted last week, heavy annealed and galvanized wires have been reduced to $2.15 a cental. Pig and bar iron remain at figures last quoted. Boiler plate, $2; Canada plates, $2.25, in an ordinary jobbing way; black sheets, $2.20; Ternes, easier at $6.10 to $6.25; tinned sheets, 72 by 32, 24 gauge, 6¾c.; galvanized Canadas, $4 for 52 sheets; tinplates, $3.65 for cokes, and $3.90 for charcoals of standard brands. In tin, lead, copper, spelter, etc., there is no change.

Oils, Paints and Glass.—Trade is yet on the quiet side, but a fair fall business is looked for. With regard to prices, little change is reported. Advices are being anxiously awaited from Belgium as glass manufacturers there are tired of the dictation of the trades unions, and the men have until September 1st to agree to their masters' terms, failing their acceptance of which it has been decided to close down indefinitely. Stocks on spot are not overfull, but in spite of above facts, there is still much cutting being done in price. Turpentine is steady at 8¾c. per gallon in single barrels; linseed oil, 43 to 44c. for raw. Fish oils dull and easy; castor, 8 to 9c.

◆

TORONTO MARKETS.

Toronto, Sept. 1st, 1904.

Drugs, Chemicals, Etc.—Trade cannot be said to be more than average, according to the majority of reports coming in from the country. Opium is still in somewhat better demand than it was some months ago, but no great volume of business is being done. Prices remain much the same.

Dry Goods.—The Exhibition and fall millinery openings have brought many outside merchants and buyers into the city, with the result that a very large trade is being done. In cotton goods the trade is a little slack, however, owing to uncertainty as to the price of raw material. Woolens are very firm, and an active business is being done. The demand for dress goods is good, and the domestic article seems increasingly popular. Travellers have been sending in good reports as a rule concerning fall prospects.

Flour and Grain.—Ninety per cent. patents are quoted at $4.40, in buyers' bags, West, and the market continues very firm. Manitoba flour is steady. Millfeed is a little firmer this week. Oatmeal remains much as before. Wheat, apart from the making of quotations for new, remains without appreciable change since last week. Other grains also remain about as quoted a week ago.

Fruits and Vegetables.—Very large quotations of fruit have been visible on the market this week, but the demand was good and everything sold pretty quickly. Tomatoes, though ripening slowly this year, are much in evidence now. Prices are good. Good prices prevail for California fruits, and large quantities of peaches are on the market. Canadians sell at 25 to 45c. per basket. A few grapes (Canadian), have come forward. Some anxiety with respect to this crop exists on account of the black rot, which seems to be increasing somewhat rapidly. We quote: Canadian peaches, bask., 25 to 35c.; apples, basket, 15 to 20c.; Lawton berries, per box, 8½ to 10c. Foreign fruits: Oranges, California Valencias, $4.50 to $5; Sorrentos, 160's to 200's, $3 to $3.25; California, half case, $2 to $2.25; bananas,

THE CANADIAN PACIFIC RAILWAY COMPANY

NOTICE TO SHAREHOLDERS.

The Twenty-Third Annual Meeting of the Shareholders of this Company for the election of the Directors to take the places of the retiring Directors, and the transaction of business generally, will be held on Wednesday, the 5th day of October next, at the principal office of the Company at Montreal, at Twelve o'clock, noon.

SPECIAL MEETING.

The meeting will be made special for the purpose of considering, and if approved, of authorizing an increase of the present Ordinary Capital Stock of the Company by an amount not exceeding $25,500,000 for the purposes of the Company—such increase of Stock to be issued from time to time according to the requirements of the Company and as may be determined by the Directors—and of adopting such resolution or By-law as may be deemed necessary in connection therewith in order to enable the Directors to give effect thereto. NOMb

The Common Stock transfer books will close in Montreal, New York and London at 3 p.m. on Thursday, September 1st. The Preference Stock books will also close at 3 p.m. on Thursday, 1st September.

All books will be re-opened on Thursday, 6th October.

By order of the Board,

CHARLES DRINKWATER,
Montreal, Aug. 25th, 1904. Secretary.

$4,500 Required
On Security of Manufacturing Plant, Value $15,000. Reduced $200 every three months (if necessary). Operated twenty-five years, recommended and valued by manufacturer of absolute integrity. Particulars apply R. F. SEGSWORTH, Barrister, 103 Bay St., Toronto.

THE
Smoke Nuisance.

Every proprietor of a high chimney will hail with pleasure the information that there is now a contrivance which can be had at a reasonable cost and easy of installation, for the prevention of the clouds of smoke which have been such a detriment to the comfort of the neighborhood, besides a loss to power users.

The one herein offered not only complies with the Municipal By-law in cutting off smoke, but also prevents grits and smudge from coming from the chimney.

In itself this alone would be worth the cost of the appliance, but the savings it makes in the coal bill will pay for itself in a very short time.

As evidence of our confidence to prove our statement we will instal our device on a boiler for thirty days without charge.

Ask for information about it.

We will be pleased to answer all enquiries.

The Whaley Automatic Smoke Preventer and Fuel Saver, Limited.
New Offices — Room 25 Manning Arcade, 24 King Street West,
Phone Main, 4893. TORONTO, Canada.

1's, bunch, $1.50 to $2; do., 8's, bunch, 75c. to $1; lemons, Messinas, 360 case, $2.65 to $3; Florida pineapples, $4.25 to $4.50; pears, California, $2.75 to $3; peaches, California, $1 to $1.25; plums, California, $1.25 to $2; watermelons, each, 20 to 30c.; beans, per basket, 15 to 20c.; sage, per doz., 15c.; potatoes, per bushel, 50 to 60c.; cucumbers, per basket, 15 to 20c.; cabbages, per dozen, 40 to 60c.; tomatoes, per basket, 15 to 25c.; celery, per dozen, 40 to 50c.; muskmelons, per basket, 50 to 60c.; lettuce, per doz., 20 to 25c.; blueberries, $1.10 to $1.20; plums, 25 to 40c.; corn, per doz., 8 to 10c.; egg plant, per basket, 35 to 45c.; grapes, champion, 40c.

Groceries.—The demand for sugar still is very good, and large quantities are moving out. Both it and molasses and syrups are firm. In teas not very much is doing, though values are firm. Dried fruits are attracting a little more general interest. Currants are disposed towards firmness. Canned vegetables are on the strong side, especially corn and tomatoes, which do not promise a good season so far as the new crop is concerned.

Hides, Skins, Tallow and Leather.—Receipts of hides are fair and prices continue about the same with a firm tendency. Lambskins are in good demand, and calfskins quite steady. Tallow is about the same. Leather has improved a little during the last few days, and prospects for a good fall trade are described as very encouraging.

Provisions.—Not much dairy of good quality is coming in, and the enquiry is brisk. Creamery, as a consequence, is also firmer. Considerable quantities of medium and low-grade goods are in the market, but for such as usual, there is not much need. Eggs are very firm, the quotation for new laid varying around 18c. Prices for poultry are good under short supplies. Spring chickens are quoted at 16c., and old birds at 11 to 11½c. Hops are quiet. There is a good market at steady prices for hog products.

Wool.—Receipts of fleece are light, and there is a good demand. The home mills are fairly brisk in their enquiries for pulled.

◆

SOME FACTS ABOUT EDMONTON.

One of the more than usually striking exhibits at the Toronto Fair is that from Edmonton. It is not so many years since people in the East—people who did not know—had a dim notion that the northern limit of profitable crop production stopped somewhere a considerable distance south of northern Alberta. But the wonderfully fine array of vegetables from the Edmonton region displayed in the Annex at the Fair, shows how mistaken was that idea. It includes potatoes, carrots, turnips, prodigious cabbages, and many other toothsome foodstuffs, and is under the charge of Mr. Porte, a gentleman evidently of much experience in such matters, who was sent here by the Edmonton Council and Board of Trade. From a little booklet, which may be had for the asking, we glean the following facts:

Edmonton has seven miles of graded streets—ten miles of sidewalks.

It has a first-class fire protection service, which includes a steam fire engine and modern appliances.

Edmonton, in 1902, decided to operate the electric light plant and instal its own water-works and sewerage system under municipal control. The electric light system is now in full running order with a capacity of 5,000 lights.

It has four and a half miles of water pipes and four miles of sewer pipes nearly completed.

It will have its own street car service in full operation early in 1905.

It is the objective point of the Canadian Northern; this year it will be completed to within fifteen miles, and next spring to Edmonton, making it their terminus. The town is the western basis of operation of the Grand Trunk Pacific.

It has a natural gas and oil company, who have commenced active operations. Furthermore, it is one of the most important fur buying centres in America.

◆

ADVERTISING N. Y. STORES.

A conservative estimate of the amount of money spent by the big department stores in Greater New York for advertising is as follows:

John Wanamaker, $500,000; Siegel-Cooper Co., $400,000; Simpson-Crawford Co., $400,000; R. H. Macy & Co., $350,000; Adams Dry Goods Co., $300,000; Bloomingdale's, $300,000; Hearn, $250,000; Enrich Brothers, $200,000; Frederick Loeser & Co., Brooklyn, $200,000; Abraham & Strauss, Brooklyn, $100,000; Rothenberg & Co., $175,000; H. Thorough English Course. Individual Attention. Pupils prepared for the Universities and for Examinations in Music and Art. Large staff of Resident and Visiting Teachers.
MISS VEALS,
Lady Principal.

small department stores, $500. Total, $4,100,000.

The expenditure is about twice that paid for rent by the big stores. Advertising is exceeded by only one other item of expense—that of salaries and wages, which is about double the advertising appropriations. Practically all this publicity is newspaper advertising.—Fourth Estate.

◆

We are told that record orders are being received in this country from Australia for agricultural implements and machinery.

THE STEEL TRADE.

Unsettled quotations for steel shapes have militated against recovery in this industry just at a most critical time, and the hope of still more attractive figures naturally results in postponement of new orders wherever delay is possible, says Dun's Review, of New York. There appears to be some difference of opinion respecting the extent of departure from list prices, but the vital fact remains, and meetings have been held to determine the basis of future operations. As most current business is arranged on contracts covering distant delivery, including provision for allowance on any charge in pig iron, it is not probable that sales will be materially affected by the sensational variations on special propositions. It was feared that the cut in prices would hold back all orders, but structural shapes for the Chicago Elevated, material for through lines, rails for two concerns, and much piping made the outlook better than at any recent date. Canadian railroads are in the United States for material, and it is reported that a large sale of rails was made considerably below the pool quotations. It is gratifying to note that several blast furnaces have been added to the active list, and quotations of pig iron have yielded very little. At the Alabama furnaces the situation is still troublesome, because of the strike at bituminous coal mines. This trouble is offset as far as possible by outside purchases of coke, and the furnaces will soon be independent of their miners.

◆

Knittel & Co.'s roller mill and elevator, at Boissevain, Man., were on Wednesday last destroyed by fire with a total loss of about $35,000; insurance, $15,000.

F. W. Karn's hardware store, at Woodstock, Ont., has been gutted by fire, which started from an explosion of oil. Loss about $10,000 or $12,000; partially insured.

New Hamburg, Ont., has passed a by-law for the issue of twenty-year debentures for $7,000 for building an extension to the public school and for other municipal purposes.

The large furniture factory of four stories at Waterloo, Ont., controlled by the Canada Furniture Manufacturers, was on Friday last completely destroyed by fire, which started, it is said, in some waste material near the elevator shaft. The loss on building, plant and stock is estimated at $125,000; insurance about $68,000 in some twenty companies.

The Altar Of Friendship
Do not hazard your all on the altar of friendship. Thousands of men have been ruined by going surety for friends. Better far for you to pay a strong surety company the premium on the bond. It will pay you to enquire about our policies.

THE METROPOLITAN LIFE INSURANCE CO.
(INCORPORATED BY THE STATE OF NEW YORK.,)
The Company OF the People, BY the People, FOR the People.
ASSETS, $105,656,311.60

Proof of Public Confidence

This Company has more premium-paying business in force in the United States than any other Company, and for each of the last 10 Years has had more New Insurance accepted and issued in America than any other Company.

The Number of Policies in force is greater than that of any other Company in America, greater than all the Regular Life Insurance Companies put together (less one) and can only be appreciated by comparison. It is a greater number than the Combined Population of Greater New York, Chicago, Philadelphia, Boston, Toronto and Montreal.

Significant Facts

This Company's Policy-claims paid in 1903 averaged in number one for each minute and a third of each business day of 8 hours each, and, in amount, $89.00 a minute the year through.

THE DAILY AVERAGE OF THE COMPANY'S BUSINESS DURING 1903.
359 per day in number of Claims Paid.
6,297 per day in number of Policies Issued.
$1,303,559.06 per day in New Insurance Written.
$98,582.76 per day in Payments to Policy holders and addition to Reserve.
$53,841.18 per day in Increase of Assets

THE WESTERN CROPS.

A very cheerful account of the prospect for the wheat yield of western Manitoba and south-eastern Assiniboia is given by our correspondent, writing from Indian Head last week. He appears to make light of rust damage. As to the probable yield, the usual differing accounts continue to appear. On August 26th the bankers and grain men of Winnipeg estimated the wheat crop at 44,000,000 bushels. A week later, the advices of the Ogilvie Company were that there would be 58,000,000 to 60,000,000 bushels. Now, it will be observed, our Winnipeg correspondent wiring yesterday noon, modestly opines that "the yield will be a good average." Here is his telegram: "Harvest has been delayed throughout the West during the past week owing to general rains, and the season is now fully two weeks later than last year. Latest reports indicate that 70 per cent. of cutting is finished. With favorable weather threshing will be in full swing next week. It appears, on the whole, that there will be a slight damage from rust, but none from frost. It is expected that the yield will be a good average one."

◆

THE SHOE AND LEATHER INDUSTRY.

There seems to be an undertone of disappointment among boot and shoe merchants regarding the amount of business they were able to transact during the summer. Responsible for this probably is the cool, wet weather which has prevailed so largely during the season. The Montreal advices reflect this tone. At Toronto, however, the Exhibition has brought a great number of out-of-town visitors into the city, and this fact should give an impetus to buying. At the same time, another consideration has been working in the direction of bringing about slowness in business, and this is the uncertainty felt regarding crops. In Ontario, these have been hardly up to average in many sections, while in Manitoba and North-West the issue is still in some doubt, though in all probability it will be found that the adverse reports as to rust and rain damage have been grossly exaggerated.

The leather market is another branch which has felt the effect of these dulling influences, though the high price of hides would likely have acted in a similar manner apart from the condition of the boot and shoe industry. Already, however, according to latest advices, the leather trade seems to be picking up, and many fair-sized country orders have been received during the present week. It should not be supposed in any case that either manufacturers or dealers in boots and shoes feel depressed as to the state of trade; for, on the other hand, as a general rule, they are looking for a really good fall season.

So far as we can learn, manufacturers have not decided in favor of any radical change in styles. They will rather adopt the more conservative plan of improving and modifying existing standards, and, we trust, will continue their policy of imparting to the solidity of their output the high finish which has gained such a good reputation for some of the United States makers.

The trade in rubber shoes, so far as jobbers and dealers are concerned, may be described as very satisfactory. Last winter was such a severe one that no difficulty was experienced in clearing out practi cally all stocks. Some retailers, with the idea, perhaps, that the new schedule of prices and discounts issued by the manufacturers would prove somewhat elastic, postponed their purchasing for the coming season a long time. They appear now, however, to have come to the conclusion that the price list was a thoroughly business-like one, and are now anxious to get deliveries made on time. The manufacturers themselves have been hampered considerably by the continued increase in the cost of raw rubber, which so far shows no sign of ceasing in the near future. It cuts into their profits in an unmistakeable manner.

CIVIC INSURANCE.

Delegates to the Municipal Convention, which has been meeting in Toronto this week, devoted a large portion of their time to the subject of "Civic Insurance." The proposals laid before the body were, we note, introduced and strongly supported by the mayor of Ottawa. There have been some rather serious fires in Ottawa during the last few years, notably the conflagration in 1900. And since then so many fires have been reported thence, in hotels, stores, public buildings, factories, lumber yards, and theatres, the post-office and Ottawa College, that the daily press when publishing an account of a fire in Ottawa used to sneer at it as "Another." As a matter of record, the fire insurance companies paid out a number of million dollars to Ottawa citizens in 1900, and in addition—if we mistake not—subscribed thousands of dollars to the funds raised in response to the appeal made for assistance to its citizens. We cannot but suppose that the insurance companies have lost money in Ottawa since 1900, notwithstanding the advanced rates which have been charged. So that there would seem to be a peculiar irony in the coincidence that this latest effort to "hit" the underwriters should be promoted by the mayor of that city which has dug down deepest into the insurance companies' strong boxes. But if Mayor Ellis can devise a scheme which will transfer from the insurance companies to the municipality of Ottawa the fire losses of that city for four years, we should think those companies would be very willing to have it done. In one respect, certainly, he would render the public a service, and that is in reducing the expense of conducting fire insurance below its present usual ratio of 30 to 35 per cent.

Toronto was very much inclined a few years ago to start a civic insurance scheme. It is quite evident now, since the great fire of April, that it was fortunate for her citizens that the proposal was not carried out. We do not hear much about it to-day. Last year the town of Shoreditch, London, England, decided to cancel the insurance on their town hall, held by underwriters, and insure by their own civic insurance plan. The transfer of the liability from the regular companies to themselves is followed by a loss of $100,000 in the burning of their town hall! They are thinking deeply now.

Ottawa has been urged over and over again to improve water works and fire appliances and remove the lumber yards from her midst, but her authorities seem to turn a deaf ear to such good counsel. Insurance rates are fixed by the cost, just like any other service rendered. If the cost increases continually, the rates must be raised, and if the losses diminish and the cost be reduced, the rates will speedily be brought down by competition between the companies.

If the municipalities would give heed to the recommendation of the fire insurance companies, the losses would be speedily reduced and the rates of premium quickly lowered. The merchants and property-owners who suffered loss by fire in Toronto in April last realize that the insurance they collected did not cover any part of their indirect losses. They realize that fire prevention is the most important matter to consider, and the municipalities should devote their earnest attention to Fire Prevention, and leave fire insurance alone. If they are successful in the former, there will be no cry about high rates, and as long as they neglect fire prevention. then high rates must be charged.

When, we wonder, will Toronto order that new alarm system which the chief has recommended for years? When will her authorities instal the new pumps and high pressure system proposed and so generally approved? When will they obtain the additional fire engines, hose and apparatus and increase the number of the brigade as recommended by their Special Committee which recently visited several American cities?

Let us hear of some agitation for prevention of fires. Every town and city in Canada can do something to improve along that line, and they cannot give their attention to a more important matter.

LIVE STOCK TRADE.

At both the Toronto and Toronto Junction stock yards the runs of live stock during the last week have been more than ordinarily large, but, though some lots of animals of good quality were among the offerings, the bulk of them were classed medium to poor. As is usually the case, the latter dragged in sale somewhat. For exporters, prices declined about 10 cents per cwt., taking the general run. At the Junction a few lots fetched $5.12½, but this was not a common figure, the range usually going between $4.50 and $4.75. Among butchers' cattle at both markets there was a large preponderance of inferior stock. The best sold at about $4.60, or even $4.80, in a few cases, but fair to good brought $3.50 to $3.90, and from that down to $2.65 for rough. Trade in feeders and stockers was pretty active, the prices realized for good animals reaching $4. However, the usual range was nearer $3. Not many milch cows have been in the market lately, and they bring anything from $30 to $60 each, according to grade and quality. Sheep and lambs were almost too plentiful for the demand. Prices were $3 to $3.75 for good class, and $3.25 or thereabout for culls. Calves are steady under light offerings. The reigning value for hogs is about $5.40.

We hear from Montreal that only a moderate amount of business has been transacted in live stock circles there, and this has consisted principally in re-letting ocean freight space. This was engaged some time ago for ranch cattle, but these, not coming up to expectation in the matter of quality, not so many have been brought forward as were anticipated. The tone of the market is fairly steady, and prices show little change. There has been a scarcity of live hogs, and prices are well maintained as a consequence.

London advices of a late date say that the course of the market for cattle has been irregular, prices for animals from the States showing an advance of ¼c. per pound, while for those from Canada they have declined ¾ to 1c. Best American beeves sell at 12¾c., while Canadians range from 11 to 11½c. per pound. Canadian sheep, which are steady, fetch 11 to 11½c. per pound.

◆

A GREAT RAILWAY.

The facts and figures presented in the last report (the twenty-third) of the Canadian Pacific Railway are very striking. The assets of the company are shown to be three hundred and fifty-nine millions of dollars, which includes not only the railway and its equipment, 9,108 miles, besides 2,213 of supplementary lines, but steamships on lake and ocean, hotels, town sites, a commercial telegraph system, acquired securities, material and supplies, and cash on hand. Besides these assets the company owns 11,338,350 acres of land in Manitoba and the Territories, the portion of which sold in 1903 and 1904 realized an average of $4.10 per acre, and 3,744,324 acres in British Columbia.

Against this, on the other side of capital account, is to be placed the capital stock, $84,500,000; preference stock, $33,473,333; consolidated debenture stock, $83,355,217, both these bearing four per cent.; first mortgage bonds at five per cent., $34,998,633; land grant bonds, $11,500,000; cash subsidies from municipalities and Dominion and Provincial Governments, and various other items to bring the total up to $359,000,000 in round figures.

The earnings of this great system, whose field is a continent and two oceans, to effect success must be enormous, and so, indeed, they are. For the twelve months ended with June, 1904, the gross earnings of the company were $46,469,132; the working expenses, $32,256,027, and the net earnings, $14,213,105. After paying all the charges under the company's obligations in behalf of supplementary lines there was a balance of $8,088,276 standing to the credit of the year. After providing for four per cent. dividend on the preference and six per cent. on the common stock there remains $1,666,000 to add to the company's surplus.

The working expenses for the year amounted to 69.42 per cent. of the gross earnings, and the net earnings to 30.58 per cent., as compared with 63.97 and 36.03 per cent., respectively, in 1903. This is a very marked difference, but the increased expenses are quite intelligibly explained to be due to the higher prices paid for wages, fuel and supplies, and the unprecedented weather conditions that prevailed during the winter. Added to this was the additional railway mileage operated as compared with the year 1902-3.

It will be of interest to our readers to have exhibited to them the various sources whence the gross earnings of $46,469,000 were derived. The statement of earnings for the year ended June 30, 1904, shows:

From passengers	$12,418,419
From freight	29,235,821
From mails	681,224
From express	1,062,379
From parlor and sleeping cars	721,006
From telegraph, grain elevators and miscellaneous, including profits on Pacific steamships	2,350,281
Total	$46,469,132

The statement of working expenses for the year ended June 30, 1904, is as follows:

Conducting transportation	$16,149,578
Maintenance of way and structures	7,372,408
Maintenance of equipment	5,873,162
Parlor and sleeping car expenses	161,026
Expenses of lake and river steamers	519,994
General expenses	1,589,134
Commercial telegraph	590,722
Total	$32,256,027

One would have thought that the expense of their sleeping and parlor cars must have been more than $161,000, likewise that the expenses of their lake and river steamers must exceed $519,000, but there are the figures. It is impossible to make out the relative earnings of the telegraph system, for, although its cost of working is put down at $590,000, its earnings are lumped in with those of grain elevators and Pacific steamships. Evidently the Dominion Express service is a good earner; more than a million dollars gross is a handsome sum to be derived from this source.

Selections from a report which covers five columns of a daily newspaper the size of the Montreal Gazette are somewhat puzzling to make. But it will be instructive to see what descriptions of merchandise gave rise to the freight traffic of the road in the last twelve months. And the comparison of this year's traffic, both freight and passenger, with that of the year preceding will afford interesting reading. The description of freight carried during 1903 and 1904 is as follows:

	1903.	1904.
Flour, barrels	5,110,767	5,270,432
Grain, bushels	63,822,710	52,990,151
Live stock, head	1,103,686	1,314,814
Lumber, feet	1,190,378,217	1,267,804,321
Firewood, cords	268,401	270,803

The passenger traffic record is as follows:

	1903.	1904.
Number of passengers carried	5,524,198	6,251,471
Number of passengers carried one mile	635,855,533	677,940,,496
Earnings per passenger per mile.	1.73 cts.	1.83 cts.

THE WHEAT SUPPLY OF BRITAIN.

In an article entitled "The Gamble in Wheat,' the London Economist of 27th August refers to the excitement in United States wheat markets during that month. It thinks, however, that while the bull position derived some strength from the prospect of a short crop in the States, the shortage had been much exaggerated for market purposes. What strikes us as remarkable in the article is the extent to which the amount of wheat supplied by the United States to Great Britain has declined relatively to that of other countries. Here is what the Economist says about the figures it supplies:

"The speculation has excited only a minor degree of attention here, for we are dependent upon the United States for our supplies of wheat to a much less extent than is the case with cotton. In fact, although the European harvest is also deficient, the sources of supply are now so widespread and various that the possibility of a serious shortage is very remote. For some time past the American supply has been diminishing in importance, and the United States have fallen from the place they once occupied as the principal purveyors of breadstuffs for the United Kingdom. The extent to which they have been displaced by other countries will be seen from the following statement of wheat imports:

Wheat Imported into the United Kingdom.

It has been shown quite recently by Mr. Johnson, the Dominion Statistician, that 33,000,000 bushels of wheat of Canadian production went to Britain in 1903; 17,400,000 bushels of this was sent direct from our shores, 15,600,000 bushels of it went in bond through the States, and was shipped via United States Atlantic ports to England. Looking at the above table, where the States are credited with sending Britain 40,000,000 bush. (244,195,000 hundredweights,) in a year, if 15,600,000 bushels of it was Canadian grain, as Johnson makes out, then the figures for Canada and the United States respectively in the Economist's table require alteration: the Canadian should be increased, the American lessened.

The Economist goes on to say: "The displacement of the United States during the current year by Russia, India, Argentina, and Australia is very striking, and in 1903 the proportion of the total supply coming from the United States was much smaller than ten years ago. At present, therefore, attempts to 'corner' wheat in the United States may be regarded here without any very great perturbation."

THE CANADIAN NATIONAL FAIR.

Some Notes on the Spot.

Outside the entrance, on the fence behind which the street cars turn, is a painted representation of cattle, life-size, to illustrate some patent medicine. The colors are high, the execution free-hand. Gazing at this from the opposite sidewalk were two men, one a country man, and therefore a judge of cattle, the other, from what followed a judge of art. Said the latter, stopping his companion and pointing to the group:

"Say! isn't that a caution?"

"Yes, them's purty good—purty well drawed, them is. See the moolies."

"Aye, aye, there's ten o' them; big as if they was alive, too. Gosh! that's wonderful."

"Look how they seem to be a follerin' ye with their eyes, as ye're goin' along. Seem to say: 'Have ye anny salt in yer pocket.'"

"Well, well! the poor critters! The man that did them was a rale machinist, an' no mistake."

Stove Building.

A marked illustration of the effect of a well-calculated background for exhibits is to be seen here. The Gurney Company have had the wall behind their large exhibit of hollow-ware painted a good umber brown, above which the name of the firm is relieved clearly. Opposite them, to the south, the Moffat Stove Company have adopted grey and gold, in which they have made a wooden frieze, against which black and nickel-finished goods show well. Contrast with these the extensive displays of the McClary Company, of London; Clare Brothers, of Preston; Doherty & Co., of Sarnia, all good exhibits, but with only white cloth banners containing the names of the firms. The difference is marked, and the appearance is distinctly in favor of the first two concerns named.

The Process Building.

Most interesting is the shed where processes of manufacture are carried on. A long range of machinery illustrates the production of the Eatonia shoe—sewing, fitting, heeling, finishing. Further along is the beautiful mechanism by which the Canada Silk Company, Limited, produces labels, dress-belts, ribbon book-marks in various widths. They show a great variety of labels made for the clothing trade and other trades. The Imperial Wire Company show wire products in process, the Canada Cork Company the manipulation of cork by machinery. At the north side the Toronto Lithograph Co. is busy turning out from lithographic presses portraits, life-size, in colors, of Laurier and Borden. These possess a great attraction for the multitude who hang around as if their teeth watered to possess pictures so good of these much-admired public men. The Toronto Type Foundry shows an ingenious press for rapid printing and numbering of tickets, and the Merchants' Cotton Co., of Montreal, two looms, busily weaving cotton fabrics. What seemed to appeal to most people, however, were the looms of the Toronto Carpet Manufacturing Co. At these were being produced specimens of rugs and different makes of carpets, such as are on exhibition in another part of the Fair.

Machinery Hall.

One is greatly helped to distinguish readily any of the fifty exhibitors in Machinery Hall by procuring one of the handy directories of the building, with diagram, issued by the Canadian Engineer proprietors, Messrs. Biggar-Samuel, Limited. Firms and companies in Brantford, Galt, Montreal, Hamilton, Midland, Cincinnati, Buffalo, Jersey City, Philadelphia, Joliette, Que., Trenton, and Toronto, have exhibits in this building. Four concerns show leather belting; five show dynamos and electrical machinery; six show engines of various sorts—hot air engines, gasoline engines, marine engines, steam engines. Probably the most striking single exhibit in the whole east end of the place is that of the James Morrison Brass Manufacturing Co., Limited. It embraces a wide scope; for example, gas and electric fixtures, bath-room and sanitary fixtures, steam specialties, well displayed. The Waterous Engine Works, of Brantford, confines its exhibit here to a single piece of machiney, a McEwen engine; the Goldie, McCulloch Co. show a 12 x 12 Ideal engine, a four-sided molder, a planer, a power-feed saw, and a milling separator; Chas. Wilson & Co., of Toronto, the scale makers, show various kinds of scales, a meat-cutter, a dough-mixer, a bread-moulding machine. As usual, the extensive space of the Canada Foundry Company is filled with a variety of iron and steel products. Its white and gold wood-work, always graceful and scrupulously fresh, improves the appearance of the whole western end of the building.

The Transportation Building.

The Transportation Building alone contains enough material to give Canadian manufacturing industry a first-class reputation for quality and variety the world over. There are many people, like His Grace the Archbishop of Canterbury, who had no idea that Canada could turn out such a fine display of carriages and other vehicles—until they visited this year's Toronto Exhibition. A display which catches the eye of the crowd is that of the Wm. Gray & Sons Co., of Chatham, Ont. It occupies a whole room, or alcove rather, which is decorated with artistic draperies and Japanese lanterns. It contains some of the finest specimens of carriages, buggies, etc., of all description, to be seen. Another large and varied exhibit is that of the J. B. Armstrong Manufacturing Co., of Guelph. Their goods are standard. The Palmerston Carriage Co., of Mount Forest, makers of the well-known Palmerston buggies, "easy to buy, easy to ride, and easy to clean," are well to the fore. They are fitted with the makers' patent adjustable bottoms. The R. McKie Buggy Co., of Plattsville, Ont., make a good showing. The Canada Carriage Co., of Brockville, shows a large number of sleighs, carriages, surreys, and "Princess" traps. Among the special features were to be noted a physician's stanhope, and a "Admiral Togo" sleigh. The McLaughlin Carriage Co., of Oshawa, who have been frequent exhibitors, show numerous specimens of their skill. Messrs. Kloepfer, of Guelph and Toronto, show samples of carriage hardware, tops, bodies, gears, etc. A striking exhibit is that of the Munro & McIntosh Carriage Co., of Alexandria. A specialty of theirs is the "Buggy from Glengarry." This ought to interest Scotsmen the province over. We wonder if this firm has got "the privilege of the limits," as told in that delightful Stormont and Glengarry story of that name by E. W. Thomson?

It is not only the Ontario manufacturers, however, who make a point of displaying their wares at Toronto Exposition. One of the finest exhibits comes as far as from Montreal, from which place E. N. Heney & Co. send a large and varied assortment of carriages, sleighs and harness. London, Brantford, Cannington, Orillia, are places which send exhibits of vehicles.

It was odd, but it was touching as well, to see two Scottish men, evidently Highlanders, possibly from the County of Bruce, searching intently for the band of the celebrated Scotch regiment, the 42nd, or Black Watch. The pair had missed the eleven o'clock performance of the band on the plaza and had been directed towards the grand stand, into which, however, they forebore to go, for it would mean the banging of twa saxpences the piece. Presently, along came two pipers in full fig of Stewart tartan, red and white, walking with the smart step and proud cock of the head and neck that reminded us of Piper Lauchlan Campbell, in "The Little Minister." One of the Canadian men had been told that these were two of the pipers of the 42nd, who were to take part in the foursome sword-dance, and he so informed his elder companion, who answered:

"No, no, Tuncan, you'll not be saying that they pipers is the auld Forty-twa. She'll ken better nor that: she'll mind the black and green kilts in the Castle forty-four year syne. Feich! Feich! Thae folk is wearin' the Prince Charlie tartan."

"But, Angus," retorted the other, "mind you they hev mair dresses nor the one. This twa pipers is for the dancin' in yonder; it's the swurd dance, I'm tellt."

With something like a Gaelic oath, the old man declared that this was not the sombre costume of the historical Forty-second, and nothing else would content him.

"We'll away down to the office, Duncan, an' she'll ask ane o' the co-mittee. It will be Sandy Macrae that wass sayin' that he saw them his nain sel, an' it wass the Black Watch tartan they will be wearing. Oh! man, but yon rid things will no do at all for the Forty-twa."

"Weel, Angus," his puzzled companion went on, "there's a good whilie to wait whateffer."

And here the writer had to get to his note book among the exhibits again, and leave the dear old impatient boy in the hope that he might both see and hear the desire of his heart, the body so famous in song and story since 1739, the year the Black Watch regiment was formed. As a matter of fact, however, Duncan was right, for the four pipers who accompanied the band did wear the Stewart tartan when engaged in their beautiful reels and sword-dances.

THE INTERNATIONAL MERCANTILE AGENCY.

Editor Monetary Times:—

Sir,—The recent troubles of the International Mercantile Agency as reviewed in your last issue must have proved of considerable interest to the bulk of your readers, many of whom are probably directly interested either as shareholders or subscribers. Since reading your article, it has occurred to the writer that there are still some things left to be told in connection with this pretentious enterprise, of which it is well the business public should be made aware, with a view to protecting them against similar schemes in the future.

The International Mercantile Agency is not the first concern of the kind that has come to grief in Canada, but it is the first which, as its name implies, has sought to become a guide to credits in both this country and the United States. In this connection the fact is chiefly notable that never before was an effort made to establish a business of this nature in the United States largely with the aid of Canadian capital, and it is likely to be not only the first but the last venture of this kind. Our Yankee neighbors without a doubt have the laugh on us to-day; for there is good reason to believe that upwards of half a million of good Canadian dollars have been sunk in this enterprise, and the names of some of its Canadian directors rank high in our business world.

How is it possible that to these gentlemen it never occurred that had there been any reasonable opening for such a venture, its smooth, sharp, clever promoter would never have had to go outside the bounds of Yankeedom to find money with which to float it? Did it never occur to them that this same ingenious promoter was without any practical experience of his own in the mercantile agency business? Did it never occur to them that the million or so dollars which his confidence game obtained was but a drop in the bucket of what would be required in order to establish an agency which could begin to properly cover the United States and Canada, and offer a service the equal of either of the two world-wide concerns who for more than half a century have been the controlling sources of credit information? And, finally, did it never occur to them that the fact of their names appearing as directors of such an enterprise, would naturally enlist the support of many Canadians who require an agency service, and in justice to these, was it not fair that a reasonable effort should have been made to provide them with at least an honest service?

It is probable that most of those who put their money in blind faith into this "International" business are well-to-do men, who are not affected seriously by its total loss, but, on the other hand, many of those less able to bear a financial loss, who were thus patriotically influenced to subscribe for its Canadian book of ratings, found their faith had been pinned to "a broken reed." It was unfortunate that a Canadian directorate could be the means to a large extent of thus unwittingly misleading others, although it must be admitted that an exceeding lack of judgment was shown by those who expected to obtain a satisfactory service from an agency of this important kind which had been in active operation only for less than two years.

As everybody knows, information is the stock-in-trade of a mercantile agency, but, as everybody possibly does not know, money could not duplicate by independent effort the records which such concerns as Dun's and Bradstreet's possess. In Canada to-day, there are upwards of 100,000 names of firms, individuals and corporations who are actively engaged in business. It is a task almost beyond the conception of even an experienced agency man to properly glean the business record of each of these 100,000 names, and ascertain sufficient reliable information to rate and report them all with reasonable accuracy, besides establishing at the same time the facilities and connection necessary to obtain particulars of the endless business changes which are daily taking place all over Canada. And yet all this is only a small part of what has to be done by a new mercantile agency in Canada alone, in order to offer a service the equal of what is now on the market.

The fate which has overtaken the "International" should suffice to convince Canadian investors that a mercantile agency business, so far from being the gold mine popularly supposed, is a tremendous thing to swallow up capital, and for many years is likely to be a poor speculation. In any case, the men who have to use such facilities, and above all, the men who essay to provide them, should see to it that their management is respectable.

Yours truly,

H. G. W.

Montreal, Sept. 7th, 1904.

OUR ST. JOHN LETTER.

Mr. C. M. Page, a native of Truro, N.S., and now living in Ohio, where he is engaged in the oil business for the Standard Oil Company, or one of its allied companies, has been visiting in New Brunswick, and made a careful inspection of the New Brunswick oil field. Mr. Page told the Monetary Times' correspondent that he believed there is a splendid future for the oil industry in New Brunswick. He said all of the sixty wells examined by him are producing oil in paying quantities, and so far as he could gather there is good ground for believing that the field is an extensive one. At present oil is got from wells about three hundred feet deep, while in Pennsylvania and other places it is necessary to bore from 1,200 to 2,000 feet, the cost consequently being much greater than in New Brunswick. Mr. Page said he gathered from the geological and other reports that in New Brunswick oil was being secured from top sands, and if the wells of greater depth were bored, other oil-producing sands would be found. This inclines him to the belief that the company has a particularly good field to operate. The parent company, which has a monopoly of the oil fields of the province, is now preparing to give leases to subordinate companies. To-day announcement was made that the right to bore in Kent County has been granted to Dr. Von Hagen, Wm. Townsend, and others, of New York, and Dr. Keith, of Harcourt, Kent county. This company will begin operations at once in the vicinity of the Beersville coal mines in which some, at least, of the new company are interested.

The City of St. John intends making an effort to capture some of the Nova Scotia apple trade. At present nearly all apples from the Annapolis Valley for the English market are shipped to Halifax and there put aboard steamers for the transatlantic trip. A few days ago, Messrs. Wm. Thomson & Co., the local shipping firm, appeared before the city council and asked the erection of a good cold storage warehouse on one of the city wharves. They explained that if this is provided, the small steamers now plying between St. John and points along the Nova Scotia coast, could bring here many thousands of barrels of apples, for shipment on the English steamers. It was represented, in fact guaranteed, that the revenue would pay for the outlay, so the city council committee has decided to recommend the building of the warehouse. The work will be pushed along as rapidly as possible. As the Messrs. Thomson & Co. are local agents of several small steamers, as well as a number of transatlantic lines, they will be able to direct and control a considerable share of the new business.

Manufacturing and other development is expected in the town of Woodstock from a water power on the Meduxnakitt river, that is now being harnessed. The dam is only about two miles from Woodstock, and the company, The Woodstock Railway, Electric Light and Power Company, expect to run the town lights and to provide power for running factories and other industries. Messrs. J. Albert Haydon, G. A. White, F. B. Carvell, James Creighton, and William Fisher, of Woodstock, are among the chief movers in the big undertaking. The dam is to be 420 ft. long and 120 ft. deep, and its building was commenced in June. It will cost about $50,000 to build. The construction of this dam will lead to the formation of a big lake in the vicinity of Woodstock, that should prove a delightful recreation place.

A New Brunswick enterprise of considerable magnitude is the gathering of clams. Since the 10th of May no less than eighty-five carloads or 1,400 tons have been carried over the Moncton and Buctouche road and forwarded to different American cities. For these the fishermen received 75 cents per bushel. Other sections produced large quantities of clams and the clam fisheries put in the hands of the fishermen large sums of money.

Lumbermen are greatly worried over the outlook, and it is said are taking steps to materially curtail the cut during the coming winter. It is understood that the Miramichi Lumber Company, which cut seven millions last winter, will not cut a single log this winter. Other concerns will materially reduce their operations, and the St. John river cut will probably fall from about 130,000,000 to about 80,000,000. It is hoped that this reduction in the supply will stiffen the market.

The tourist season in the province of New Brunswick was not a particularly good one. Now the hunters are coming from Canada, England and the United States seeking the big game to be found in New Brunswick woods. Last year about $20,000 was received in licenses, and it is believed more will be collected this season.

St. John, N.B., 7th September.

* * *

FINANCIAL NOTES.

The Sovereign Bank of Canada has opened a branch at Linwood, Ont., with Mr. L. P. Snyder temporarily in charge.

The Great West Permanent Loan and Savings Company has received a license authorizing it to carry on business within the province of British Columbia.

The aggregate of new incorporations in the Eastern States in the month of August makes a new low record for a long time. It amounted to $32,960,000, compared with $61,374,000 in July, and with $77,950,000 for August, 1903, and $241,879,000 for August, 1902.

Thirty-five per cent. decline in four years is a considerable ratio to be shown in aggregate efforts to float new loans and new companies on the English market. The London Economist, which keeps track of such offers to capitalists, has the following table, dated 17th August:

Total offered for subscription to date in—

1904	£ 79,696,156
1903	90,925,354
1902	120,965,455
1901	131,693,332
1900	129,899,424

Total offered for subscription for the whole year—

1903	£108,462,680
1902	153,811,987
1901	159,358,498
1900	165,499,224
1899	133,169,724

We thus see that, taking the high tide period of 1901, there was a decline of 8 per cent. in the next year's offerings, of 25 per cent. in the next, and 12 per cent. in the next, in the transactions offered during eight months in four succeeding years. The amount is lower this year than for a long time.

FIRE INSURANCE MATTERS.

We were favored recently with a call from Mr. Wilbur Mooney, general agent at Ottawa, of the Mutual Life of Canada.

It is agreeable to find the city authorities looking sharp after some fire appliances in the outskirts of Toronto. On Tuesday, the civic property committee met and ordered plans to be prepared for a new fire hall on Queen street at Woodbine Ave., and tenders to be called for. Commissioner Fleming also asked the council for $10,000 to start the excavation work of the new wing at the Cowan Ave. fire hall. The total cost, he said, would be $30,000. The committee instructed the city architect to prepare plans for the building so that tenders might be called for. The commissioner will also tender with a view to doing the work by day labor.

It is not so very long since a number of gentlemen in Western Ontario, principally, we believe, in London, made application to the Ontario Government for permission to conduct a cash mutual fire insurance company, under the name of the Universal Company. Being consulted in relation to this proposal, Dr. Howard Hunter, of the Insurance Department, expressed the opinion that it was not advisable to multiply such companies. It seems that the promoters of the Universal had expressed their willingness to provide for a business of $500,000. With such financial strength as that, Dr. Hunter declared, the Universal could get a charter and do business as a regular commercial company, and there was no need that it should pose as a mutual.

Eight hundred thousand dollars are the loss figures in the most recent conflagration in the United States. This time it is at Memphis, in the State of Tennessee, situate on the Mississippi river. Its cause is unknown. A fire broke out last Saturday on Front street, in the heart of the wholesale district of the city, and caused a loss of $800,000. The fire started in the Oliver-Finnie Company's grocery, whose stock and building were destroyed. The building on the north, owned by John Denies Sons, stored with lime, was partly crushed by falling walls. The Memphis Paper Company's building was crushed, and partly burned, also a firm of wholesale commission merchants, and the rear portions of the J. T. Ferguson & Company's building. The Oliver-Finnie Company's loss is between $400,000 and $500,000. A fireman fell from a ladder and was seriously hurt; six others were overcome with heat and smoke, but will recover.

LIFE AND ACCIDENT ASSURANCE.

At the recent meeting of the Liability Assurance Conference, it was decided to revise the rates and classifications which are to go into effect the first of November. Losses on such classes as metal workers, construction work, mining, stone work, packing houses, etc., are found to be heavy, as shown by the statistics of the different companies brought down to the end of last year. These classes have been particularly unprofitable in the West. The Argus says that classifications will be revised wherever risks are found not to be properly classified and hence not carrying the proper rate.

Including the companies transacting industrial insurance, says J. B. Lunger, there are probably over 50,000 agents who are devoting their entire time to soliciting risks for the life companies.

There is to be a meeting this month of the executive committee of the International Association of Accident Underwriters. The meeting is to be held in New York city, when a plan for tabulating the health insurance experience of the membership companies and associations will be determined upon.

No matter how wealthy a man may be (and the richer he is the more complications there will be in settling his estate), he should have one policy at least, payable directly, without any conditions whatsoever, to some one person who can get the money and use it as soon as the death occurs.—Alexander Williams.

The death of Mr. Colin McCuiag, F.F.A., actuary of the Scottish Union and National, at Edinburgh, is announced by the Insurance Record, of London. He was a very athletic man, a famous boxer and golfer; and it is the irony of fate that his death, at the age of 65, was due to a chill while on a cycling trip in the Highlands. He had held the important positions in the Faculty of Actuaries, of examiner, member of council, and honorary treasurer.

Confirming what was stated in our English letter of 6th ult., a London exchange states that a provisional agreement has been entered into between the directors of the London and Lancashire Fire Insurance Company, whose head office is in Liverpool, and the board of the Scottish Employers' Liability and General Insurance Company, Limited, of Aberdeen, by which the London and Lancashire absorbs the Scottish company. The Scottish Employers' was founded in 1881, and has boards of directors in Aberdeen and Glasgow. Its premium income in 1903 was £123,965, and its reserve funds and balance of revenue account amounted to £103,521.

That picturesque swindle, the Perseverance Homes Assurance Company, has been alluded to previously in these columns. Its autopsy is now being conducted by the examiners in bankruptcy, and Samuel Cooper, its founder, is immured in prison. Some £5,000 capital appears to have been paid up against the nominal £105,000. At times 4,000 agents and 650 superintendents have canvassed on its behalf among working people in the North, but not too near the headquarters, which were at Leeds. Samuel Cooper, as managing director, was able to exercise all the powers in his own person that the board held. But as the chairman of the company was a lad of twenty-one at the time of his appointment, with a business experience limited to gratuitous assistance to a chemist and druggist, it does not seem likely that he would interfere with the disingenuous promoter. The other directors were a son-in-law (an ex-railway clerk) and a son (a ship's steward) of Cooper's, and so were well under control. Probably the laws bearing on external offices would militate against the operations of such an institution in Canada. In any case the disclosures ought to serve to harden assurers against mushroom enterprises.

The Thomson line steamer "Hurona" the other day took the first shipment of grain from the new elevator at Montreal. It comprised 20,000 bushels of wheat, bound for

—As an illustration of the vast increase of the wheat growing in the North-West, it may be remarked that in 1901 the storage capacity of the North-West was 2,436,000 bushels divided among 88 elevators and 21 warehouses. The following season there were 111 elevators doing business and 18 warehouses with an aggregate capacity of 3,194,000 bushels. Last year the storage capacity of the same territory had increased to 5,105,000 bushels in 176 elevators and 23 warehouses.

TORONTO SEPTEMBER 9, 1904.

NOTES FOR GROCERS.

Valencia raisins are looking higher. Currants have been and still are low, in the face of an estimated shortage of 25 to 30 per cent. in the crop, as compared with last year.

Sugar gives every indication of advancing. The New York market is excited and active, because it has been found that owing to general drought the European beet crop is estimated to be six hundred thousand tons short. Higher prices for molasses are also likely, according to our Montreal report.

Here are some pleasing words of praise for Canadian bakers and confectioners. A cable of Monday last to the Canadian Associated Press says: The London correspondent of the Edinburgh "Scotsman" says the Canadian exhibit at the Bakers' and Confectioners' Exhibition is probably the most unique display of its kind ever seen in this country, demonstrating as it does that Canada is quite capable of competing with the Mother Country in the production of certain articles for consumption.

The Inland Revenue Department has recently been making analysis of wheat flour collected throughout Canada. The results are said to demonstrate that there is no such thing practised in Canada as the addition to it of inorganic substances, such as gypsum, as had been somewhat foolishly reported. The chief analyst goes on to say: "No indication has been found of the admixture in these samples of flour of any other or lower priced grain. Such an addition would in the case of maize flour be economically possible, but would result in lowering the quantity of gluten yielded by the sample. All those samples in which the percentage of dry gluten was less than 10, or in which the ratio of dry gluten to proteids was less than 1.2 to 1, have, however, been examined under the microscope without the discovery of any foreign starch. The number of samples so examined amounts to 37, and it was thought quite unnecessary to examine the others. It is, therefore, safe to conclude that no suspicion of adulteration by foreign grain attaches to any sample of Canadian flour."

The United States Department of Commerce and Industry has been making a study of such economic disturbances as the Chicago packers' strike. It finds that in July, so far as railway traffic is concerned, there was a decrease of from 2,620,046 head of live stock in that month in 1903, to 1,554,451 head, in 1904, affecting the five markets of Chicago, Kansas City, Omaha, St. Louis, and St. Joseph. Cattle receipts fell off 42 per cent.; calves, 54 per cent.; hogs, 39 per cent.; sheep, 40 per cent., and horses and mules, 9 per cent. In the number of cars of stock handled, the month's record shows a decrease in traffic of railroads from 52,752 cars in July, 1903, to 30,741 cars in July, 1904, or a loss of 41 per cent. Comparing July with June of this year, the figures both as to the number of stock received and of cars handled indicate a heavy loss of traffic. Not infrequently July is the lighter month of the two in the live stock trade. In this case, 1,151,217 head, or 42 per cent., less were received than in June, and 21,418 cars less were received, or an average loss of 1,338 cars per working day from the beginning of the strike to the end of the month.

◆

—Mr. Tanimura, of Japan, in his address at the Exhibition directors' lunch in Toronto yesterday, declared that the Exhibition is a better one than that at St. Louis, because more really instructive.

DRY GOODS NOTES.

Mr. D. H. Ross, Canada's commercial agent in Melbourne, Australia, says he has had several enquiries for catalogues and prices of Canadian furs and other garments. This is the time of the year when the large Australian dry goods importers place the bulk of their European and American orders for the winter's trade.

We are told that there is a prospect that the Wyld-Darling Company, of Toronto, will be absorbed by the well-known dry goods firm, in the same city, of Gordon, Mackay & Co. Negotiations to this end have been carried on for some little time, but so far are not completed. Both houses, it will be remembered, were burned out in the big fire, but Gordon, Mackay & Co. are rapidly completing a fine new warehouse on the old site, but larger, while the Wyld-Darling warehouse has not been rebuilt. The firm was founded in 1855, and Mr. Donald Mackay, long the senior partner of the house, is president today. The woolen department of the Wyld-Darling Co. was taken over shortly after the fire by Thomas Ogilvie & Sons, of Glasgow, Scotland.

◆

—Reports vary as to the status of the meat trades' strike in the United States. In New York, the men who went out "in sympathy with their Chicago brethren," have gone back to work. In Chicago many of the hands made a similar attempt and voted in favor of calling the strike off, but they were overruled. In the meantime, apparently, they are doing themselves no good, and the country in general a great deal of harm.

◆

—A report showing the population of France according to the census of 1901 has been received by the French Minister of Commerce. It shows the population to be 38,961,945, a gain of only 444,613 in ten years. This is only about one and one-seventh per cent. This is a very slow increase, smaller than Russia, smaller than Germany, smaller even than Great Britain. But while the three peoples last named lose many people year by year through emigration, France does not. Her small growth of population must be accounted for otherwise. Probably the resolve of couples living in cities to restrict the size of their families is having its effect.

◆

—It cannot be said that attention to the working-man has been lacking in Montreal this week. At crowded gatherings in large Roman Catholic churches they were preached to in French and English, and much advice given them. On Labor Day there were, so it is stated, four thousand workmen walking in procession, which formed on Fletcher's Field. Three hundred delegates (presumably labor union), with a band came in from St. John's, a number from Burlington, Vermont, who also had a band accompanying them, a few from Valleyfield, and several from New Brunswick. When the procession reached De Lorimier Park, the games and competitions began. Riverside Park was also the scene of a large gathering.

◆

CLEARING HOUSE FIGURES.

The following are the figures for the Canadian Clearing Houses for the week ended with Thursday, September 8th, 1904, compared with those of the previous week:

	Sept. 8th.	Sept. 1st.
Montreal	$17,759,281	$18,726,527
Toronto	12,245,383	12,901,620
Winnipeg	4,011,353	4,728,773
Halifax	1,716,454	1,858,517
Hamilton	1,024,666	972,451
St. John	1,101,172	1,032,104
Vancouver	1,347,192	1,529,016
Victoria	508,898	631,709
Quebec	1,754,659	1,410,266
Ottawa	1,683,685	1,563,172
London	867,267	784,200
	$44,020,020	$46,138,355

NORTH OF ENGLAND LETTER.

Two circumstances have been attracting the notice of the English press. The five per cent. decline in Britain's share of Canadian trade in the last fiscal year, coupled with Uncle Sam's increase of twelve per cent., is, perhaps, the more momentous of the two. But that which has aroused most attention is the news that the Montreal woolen mills are going on half time. Reuter tells us that the manufacturers are convinced that no improvement is imminent, and that the British cloths on hand and bought under old duties are sufficient to last for two years. In woolen circles the hope is expressed that this estimate may prove to be exaggerated. Political morals also are being deduced from this message, of which one from the Daily Chronicle may be cited. This journal makes a feature of colonial matters, and in general argues with conspicuous sanity. A few words will show the trend of the article:

"It would be interesting to have the views of the Canadian woolen manufacturers on Mr. Chamberlain's preferential tariff scheme. . . . Is it conceivable that these manufacturers will move a finger to help their (English) trade rivals so that the Manitoba farmer may have an advantage in our market? . . . We know that they mean to have more protection against the Mother Country. . . . Next year they will no doubt compel the Canadian Government to restrict the preference to goods imported direct to Canadian ports, which will act as a further restraint upon our trade. . . . The recent tariff changes show the manufacturer to be far stronger than the farmer at Ottawa." These are precisely the sentiments that animate our Free Trade Radicals and Unionists; or, in other words, the majority of Home-dwellers. It is well, therefore, that the facts should be completely understood.

As the foregoing was being written down, a private advice from a leader in the Dominion's woolen industry

Fire Proof Safes.

IT IS STRANGE
how frequently merchants and others put off the matter of protection for their books and other papers. One fire will do more damage than the cost of two or three safes. Send to the Goldie & McCulloch Co., Limited, Galt, Ont., for a Catalog of Safes and Vault Doors that are suited for stores and other buildings.

has been handed in. Its purport is curiously at variance with the tale of woe from Montreal. "Our traveller has more confidence in the future than he has had for five years. We are jogging along nicely, with just enough work to last until repeat orders are due. Our samples have all given satisfaction. With a fair state of trade we shall have a lot of orders." This message will be published in the papers here that are read by our own producers. Doubtless it will convince them, as it does me, that success in this line of manufacture in Canada or elsewhere is, firstly, a matter of management. That some mills should be short of work is not evidence enough that a whole trade is hastening to decay.

Tobacco men on this side are keenly interested in your legislation directed against the American Tobacco Company. The tobacco octopus made a raid upon ourselves, being repulsed only after a stiff battle. But the slaughter of one trust involved the birth of another, the Imperial Tobacco Company, which holds the trade in Britain pretty well in its palm. The Imperial Company, after worsting the Americans and buying their Liverpool depot, did away with the tied-house system instituted by Ogden's (as the trust was known in this country). Our retailers are alive, however, to the dangers of monopoly, and it would surprise nobody if, in a few years' time, Great Britain should adopt any law to restrain trusts which may have proved its efficacy in Canada.

Making a living as the victim of accidents to the person is not nearly so precarious as one might have supposed. It is true that James Rush has been jailed at last, but between November 23, 1902, and March 16th of the present year he has nefariously put £267 10s. into his purse. Ten claims for sums between £12 and £45 have been paid by seven compensation companies, for he has defrauded three offices twice over. By change of name and change of doctors Rush got along tolerably well, and even opened a banking account. At length policies were cancelled and proposals declined, and now the enterprising rascal awaits sentence.

A passage in a German consular report from Varna (Bulgaria) is so sensationally at variance with many shallow opinions now afloat that its introduction needs no apology. "Although many a country occasionally succeeds in pushing particular British articles out of the market, the British firms forthwith regain the lost ground by modifying their goods to the altered conditions. Great Britain is superior to other countries, because she offers an extraordinarily rich variation in designs, so that the wholesaler invariably returns to the Briton." The testimonial, be it reiterated, is German, and within certain limits it is actually true. Gratifying as the statement is to the Englishman, it doubtless conveys a hint to his colleagues and rivals.

Manchester, Aug. 26th. NORTH COUNTRY.

◆

BANK DIVIDENDS.

Editor Monetary Times:

Sir,—In conversation with the general manager of one of the large Canadian banks recently, he remarked that he did not think the dividend would be raised until they had added $500,000 more to the bank's reserve fund. He said, however, that the profits more than justified an increase of the dividend.

There seems to be a disposition among the general managers of the different banks to keep the dividends low and pile up reserve funds, so that the institutions that they have under their control shall show up well with the other banks. There is such a thing as carrying this spirit of competition too far, and the shareholders might like to get larger dividends than 9 and 10 per cent. where the institutions are making, in some cases, 16 to 20 per cent., especially as the majority of shareholders hold small amounts of stock, for which they have paid a heavy premium.

Several of the banks that are paying 9 and 10 per cent. seem to be afraid to take the initiative and increase their dividends. In Canada there is only one bank that pays more than a 10 per cent. dividend, and that is a small local bank in New Brunswick. Most of the banks could increase their dividends, and still put substantial amounts to reserve every year.

Yours truly, SHAREHOLDER.

5th September, 1904.

[It is, perhaps, natural that holder of bank shares "for which he has paid a heavy premium" should be anxious to get a big return. This, indeed, seems to be the object of the great majority of investors. But we cannot agree with the writer of the above letter that a policy of large dividends is the best thing for our banks. It is well to strengthen the reserves in good times in order that regular dividends may be maintained when the lean years come and there are no splendid profits earned.—Ed. Mon. Times.]

◆

BRITISH COLUMBIA MINING NOTES.

The Dominion Government's recent legislation regarding a bounty on lead ores has been extended so as to include shipments abroad when it can be shown that the charges for freight and treatment in Canada are excessive. A shipment was recently made from the St. Eugene mine at Moyie to Antwerp, Belgium, and this will be subject to the payment of an extra bonus of fifty cents per hundred pounds of lead.

Constant Fernan, chemical engineer of Newcastle, England, who last year was engaged in studying mineral conditions in the Kootenay district of British Columbia, is outlining a scheme for developing zinc mining, thus inaugurating a new industry in Canada. At Rosebery, in the Slocan, a site has been purchased for zinc-enriching works This is purposed to handle zinc concentrates from Slocan mills, eliminating more lead and silica than is secured by ordinary concentration, and producing a much higher-grade zinc concentrate. Primarily, the works are designed to handle the output of the Monitor mine at Three Forks. A smelter will be at Fernie, we are told, where coal is available at low cost, for the manufacture of the gas essential to the smelting process. The plant is designed to handle 10,000 tons of zinc ore per annum, with facilities for increasing the capacity without additional machinery up to thirty thousand tons annually. Machinery is expected to be in position for operations by the coming winter.

Two syndicates, represented, it is said, by Judge Pritter, of Spokane, Wash., and by the Teetzels, of Nelson, B.C., have pooled a hundred coal claims, and have arranged with a recently organized company to build a railroad giving transportation facilities to the new coal and oil fields in South-east Kootenay, and also erect coke ovens at some convenient spot.

The tonnage shipped from the chief low-grade mines of the Boundary district last week was as follows:

	Tons.
Granby mines to Granby smelter............	8,550
Mother Lode to Greenwood smelter.........	3,158
Emma to Greenwood and Nelson smelters..	1,098
Mountain Rose to Greenwood smelter......	100
Oro Denoro to Granby smelter.............	35
Total for week	12,939
Total for year	525,410

The Granby smelter treated during the week 10,500 tons, or a total of 388,348 tons for the year.

WHEAT IN THE WESTERN PRAIRIES.

Since so much has been heard for weeks past of the ravages rust is alleged to have made in the Canadian wheat crop, it is reassuring to have from a careful man who enquires understandingly on the spot and makes note of what he is told, that in a tract at least 150 miles in length there is no serious rust damage. Such a man is our correspondent, "Rambler," who, since the last week of

A collision occurred with the C.P.R. Imperial Limited train, at Sintaluta, a place about 300 miles west of Winnipeg, on the 2nd inst., and five people, all women, were killed. The vice-regal party were on board the train, but none were injured.

August, has visited many places between Brandon and Indian Head, from which last place he writes:

"The weather this last week has been wet, cold, and backward, whereas dry, warm weather that will ripen the grain is sorely needed. Although in many cases the grain is not fully turned, and looks green, the farmers are busy cutting. When it comes this late the risks from frost multiply. The wheat cut green will be very liable to shrink and suffer a little in the grade, but not to the extent it would suffer were the thermometer to take a sudden drop and make this product like chicken-feed. Frost is the calamity most feared. In the quiet eventide, when the shadows lengthen, men are sniffing to discover from what quarter the gentle breeze is blowing. With a clear sky comes apprehension of the Frost King. With the clouds in evidence he retires thankfully to rest, accepting this as evidence that no injury from this cause will come upon his fields to-night.

"Travelling from Brandon, in Manitoba, westward to Indian Head, in Assiniboia, from 150 to 200 miles, I have gathered none but the most favorable reports about the harvest prospect. 'The best crop I have seen since 1887, and that was the best this country has ever had'—so said M. Leitch, of Leitch Bros., at Oak Lake, Man. This was after driving for a week and most thoroughly covering the district. When he enquired about 'rust,' farmers would grin, and surmise that some deep-laid scheme was being worked to depreciate their fine-appearing crops. And he said he was usually met by the answer: 'Keep away the frost, and we will take care of the rust.' There is rust, of course—a discoloration of the leaf and of the straw—but this has apparently in no way affected the head. This is common every year where the yield is heavy, usually on summer-fallowed land, but where the yield is light, where grain has been sown on the stubble, there is absolutely no rust.

"One can hardly blame the farmer for having his misgivings about what is causing all this talk about rust in the Canadian North-West. He may connect much of it in his own mind with the peculiar manipulations of the Wheat-pit, though, perhaps, his notions are not well defined. The flotsam and jetsam of past struggles drifts in upon him; the various corporations with whom he has in some way had to measure his strength in successive years, leaves him too often with the impression that he has had the worst of the contest thus far. And now he is 'guessing.' With dry weather, favorable for field operations, the West will witness the most prosperous season we have yet had, but everything depends on the crop's taking off. The wheat will grade well, I should say, the berry being round and plump; the heads are well filled, in many cases being six-rowed. Root crops are also showing up well. Merchants, I can testify, are feeling good, and ordering freely. All that is desired now is fine weather to make assurance doubly sure." RAMBLER.

Indian Head, Assa., 3rd Sept., 1904.

THE EASTERN TOWNSHIPS FAIR.

This year's Sherbrooke Fair, the twentieth yearly fair in the history of the Eastern Townships Agricultural Association, closed last week most successfully. One who was present tells us that in some respects it surpassed its predecessors. More applications for space in the Main Building were received this year than could be granted. The cattle department was up to the high standard maintained year by year at this event. Prominent among exhibitors was the Charnock Farm, of St. Andrew's, N.B., which sent a herd of prize-winning Holsteins to compete against the animals from the Townships. But it is thought that the greatest progress made in any department there is that shown in horses. Indeed, besides filling the new stables erected this year, some fifty horses had to be quartered in the city. Then the exhibit of the Government Poultry Station at Bondville, Que., illustrated all processes and stages of chicken raising and fattening. The efforts made by competitors in butter and cheese for the handsome prizes, aggregating $500, offered by the Eastern Townships Bank, were very numerous. Factories and creameries in all parts of Canada were represented, and the competition was keen. The prizes in the sections for butter and cheese are divided as follows in each class: $75, $50, $35, $25 and $15.

By way of a novel attraction the United States Naval Reserves of Portland, Me., had been engaged to give two exhibitions of their drill at the fair grounds. Prominent men and Ministers of the Crown were not wanting, among those present being Hon. Sydney Fisher, Dominion Minister of Agriculture; Hon. Mr. Turgeon, Quebec Minister of Agriculture; Hon. Mr. McCorkill, treasurer of Quebec; R. H. Pope, M.P. The exhibits of manufactured goods were creditable indeed, Ontario and the Lower Provinces vieing with local houses. The Granby Rubber Company had a large and well-arranged exhibit of all styles of rubber footwear. The Joliette firm of S. Vessot & Co. showed their feed mills, dairy appliances and a variety of farmers' machinery. Their feed mills are also to be seen at the Toronto Fair. The Edwardsburg Starch Co. exhibited starch products and other goods of their manufacture, and the Magog Woolen Mills their cloths, blankets, tweeds, homespuns, yarns.

FOR GROCERS AND PROVISION DEALERS.

Estimates place the probable yield of the Grecian currant crop this season at 150,000 tons, considerable damage having been caused by bad weather.

The opening figures for this season's sultana raisins are a good deal higher than usual, owing to the shortness of the crop.

The Ontario Government has granted a charter to F. F. Stewart & Sons, Limited, authorizing the company of that name to manufacture and deal in essential oils, essences, fruit juices, extracts, jams, beverages, drug supplies, etc. The capital is to be $50,000, and headquarters at Toronto.

We are pleased to see that Mr. J. G. Boucher, of St. Hyacinthe, has again won the cup given at the Toronto Fair as a prize for the highest scoring creamery butter on exhibition. He carried off a similar cup last year. The honor is a decided one, and not only Mr. Boucher but the Province of Quebec is to be congratulated.

In his official report to the Ottawa Government, dated Manchester, England, 15th August, Mr. P. B. Macnamara says: "The market for canned goods in England is one keenly exploited by United States and other countries doing an export trade, and hence is behooves the canners to put up the best fruit obtainable if they desire to hold this market. Canadian canned goods are looked on with much favor in this city, and the varieties that command the greatest sale are apples, pears, peaches and tomatoes." And Mr. P. B. Ball writes from Birmingham on 13th August to the Department of Trade and Commerce: "Canadians should exercise even greater care than last year in the shipments made to the United Kingdom. The impression made by Canadian apples last year was very good, and they will always be looked forward to as the very choicest class of table apples. The fruit grown in Great Britain does not exhibit the beautiful color, which is one of the chief characteristics of the Canadian fruit. Hence, there will always be a preference shown to them, even beyond the United States fruit."

The Liverpool Fire Brigade has just put into service what is called the very latest invention in fire-extinguishing apparatus. This has been designed and constructed by Messrs. Merryweather, and consists of a motor steam fire engine, with pumps delivering 500 gallons per minute, combined with a chemical engine having a cylinder holding sixty gallons of liquid, which is automatically delivered at high pressure. This new machine can turn out in one minute from an alarm, travel at over twenty miles per hour, and, on arrival at a fire, instantly bring the chemical jet to bear on the flames.—The Post Magazine, London.

The Molsons Bank.

98th DIVIDEND.

The Shareholders of The Molsons Bank are hereby notified that a dividend of FOUR AND ONE-HALF PER CENT. upon the Capital Stock has been declared for the current half-year, and that the same will be payable at the Office of the Bank, in Montreal, and at the Branches, on and after the

First Day of October next.

The Transfer Books will be closed from the 19th to the 30th September, both days inclusive.

THE ANNUAL GENERAL MEETING of the Shareholders of the Bank will be held at its banking house, in this city, on Monday, the 17th of October next, at three o'clock in the afternoon.

By order of the Board,
JAMES ELLIOT,
General Manager.
Montreal, 26th August, 1904.

The Bank of British North America.

INCORPORATED BY ROYAL CHARTER.

The Court of Directors hereby give notice that an Interim Dividend free of Income Tax, for the half year ended 30th June last, of thirty shillings per share, being at the rate of Six per Cent. per annum, will be paid on the 7th day of October next, to the proprietors of shares registered in the Colonies.

The dividend will be payable at the Rate of Exchange current on the 7th day of October, 1904, to be fixed by the Managers.

No transfers can be made between the 23rd instant and 7th prox., as the books must be closed during that period.

By Order of the Court.
(Sgd). A. G. WALLIS, Secretary.
No. 5 Gracechurch Street,
London, E. C., 6th Sept., 1904.

The Dominion Bank.

Notice is hereby given that a dividend of Two and One-half per Cent. upon the Capital Stock of this Institution has been declared for the quarter ending 30th September, 1904, being at the rate of Ten per Cent. per Annum, and that the same will be payable at the Banking House in this city on and after

Saturday, the First Day of October Next.

The Transfer Books will be closed from the 20th to the 30th September next, both days inclusive.

By order of the Board,
T. G. BROUGH,
General Manager.
Toronto, 24th August, 1904.

Mercantile Summary.

An Ottawa grocer, A. Juncau, is reported insolvent, with liabilities of about $2,000.——J. D. Smith, who succeeded his father in a moderate general business, eight or nine years ago, at Billing's Bridge, a suburb of Ottawa, has assigned to W. A. Cole, of said city.

The Young Grain Company, Limited, Winnipeg, capital, $300,000, has acquired a charter from the Dominion Government, authorizing it to operate elevators, warehouses, and deal in timber limits and real estate. Thomas Buck, of Killarney, Man., and Charles A. Young, of Winnipeg, are two of the charter members.

The Canada Car Company, Limited headquarters at Montreal, has received a Dominion charter. It intends to manufacture railroad cars, passenger, freight and street cars, pressed steel and other trucks; it is also to acquire mines, smelt, purchase and cut timber. Among the charter members are Thornton Davidson, of Montreal, and A. H. Larkin, of New York.

In the Chatham World, of Saturday last, are some stanzas by Michael Whelan advocating, very appropriately as it seems to us, the erection of a memorial to Hon. Peter Mitchell, who was one of the Fathers of Canada's Confederation, and who was an able and a stalwart New Brunswicker. Says Mr. Whelan:

Let all your patriots, all your sons and daughters,
Contribute in a spirit fond and free,
Until shall rise above the glistening waters
His monument beside the Miramichi.

A firm doing a small grocery business, at Londonderry, N.S., since last December, Urquhart & Codman, have gone into insolvency, and Codman is reported an absentee, his partner claiming that he took away some $800 in cash. The liabilities are about $1,200.——Elizabeth W. Horton, whose name is employed by her husband, James Horton, in a small general store way, at Springhill, N.S., is reported to be offering 50 per cent. Horton failed in 1895, and subsequently peddled coal oil, soap, etc., until a year ago, when the present business was started.

An admirer of things and people Scottish seems to belittle the brief story we had last week to tell about Scottish folk and Hielandmen in Cape Breton. He is a Toronto man, and says: "Talk about twenty different Macs in Cape Breton! That is a very small fraction of the Macs in Canada. Do you know that the Toronto Directory contains hundreds of Macs? I mean different spellings of names beginning with Mac—not all Scottish, of course. But the concern that revels in Scottish names, Scottish clans, Scottish tartans, and is 'up' in Highland dresses, male or female, is John Catto & Co. He has issued a pamphlet: "The Tartans of Scotland,' twenty pages, illustrated, and he gives a list of 309 Macs, some of them very queer-sounding ones, I assure you. Is not MacGrensick, or MacKenzies, or MacWhaunels as droll as anything in Ian Maclaren?"

IN HER PUBLIC LANDS

many thousands of square miles in extent, the Province of Ontario offers unexcelled inducements to mining prospectors and capitalists looking for large returns for their money.

Many valuable deposits of iron, nickel, copper, gold silver, arsenic, mica, corundum, graphite, granite, limestone and other ores and minerals have been found in Northern, Eastern and Northwestern Ontario, and many more are doubtless yet undiscovered.

For maps, reports, Mines Act, etc., apply to Hon. E. J. Davis, Commissioner of Crown Lands, or Thos. W. Gibson, Director Bureau of Mines, Toronto.

Mercantile Summary.

The office of the Whaley Automatic Smoke Preventer and Fuel Saver, Limited, has been removed from the Confederation Life Building to Room 25, Manning Arcade, 24 King St. West,, Toronto.

Mr. James Wilkes, formerly a Brantford merchant, for twenty-four years city treasurer there, and one of the most respected citizens, died on Monday at the age of 96.

An Eastern Townships newspaper says that the Truro Condensed Milk Company is discussing building an extension to its Huntingdon factory. Other parties are considering the erection of a condensed milk factory at Cowansville, Que.

S. E. Adam, for many years a prominent general merchant at D'Israeli, Que., is embarrassed, indeed he has had to assign, with a list of liabilities aggregating $14,550, and nominal assets of about $18,000. Some ten years ago he was in similar straits, as the result of political ambitions. Having run for Parliament and been defeated, he then effected a compromise at 75 cents on the dollar.

A demand of assignment has been made upon Andrea Vilani, engaged in the lumber trade at L'Annonciation, Que. He was originally a contractor or middleman, supplying Italian labor to railways, and eventually drifted into the getting out of railway ties in large quantities, in which he is said to have done pretty well. Last year he was a very heavy loser by the severe bush fires which swept through the Labelle district, and his affairs have in consequence become involved.

An offer of 50 cents on the dollar has been made by Alexandre Dallaire, general dealer of Ste. Anne de Chicoutimi, Que., whose liabilities are shown at $6,107. Alexandre succeeded three years ago to the store business of O. Tremblay, his former employer, but has since also engaged in lumbering, with apparently unfavorable results; he has also credited lavishly. His estate shows nominal assets of $8,000, but $5,160 of this is in book accounts, the result of realizing on which is tolerably sure to be disappointing.

A score of invited guests went on board the new steel steamer "Haddington," on Tuesday last, for a trial trip on Lake Ontario. This steamer is full canal size, 256 feet in length, 43 feet beam, 18 feet depth of hold, with triple expansion engines. She was built, and her engines and boilers were built,, at the Bertram Engine Works, Toronto. Her capacity is 2,300 tons, and she will carry 75,000 bushels of grain on 14 feet draft. The vessel is intended as the first of a group of similar screw steamers to ply between Port Arthur and Montreal, carrying grain downward and package freight westward. On her first trip, the "Haddington" answered well, her helm and her engines worked true. She has four hatchets and is equipped with six steam cranes. This substantial ship was built for a syndicate represented by Capt. J. T. Mathews, and is a credit to her owners and her builders.

GEO. A. STIMSON & CO.,
24-26 King Street West TORONTO, Ont

A cablegram of Monday last says that the largest sugar factory in Germany, named Kumee, near Thorn, West Prussia, was burned, involving a loss of $125,520, and caused a rise in the sugar market at Hamburg, of three cents a hundredweight.

The suspension is noted of B. Crepeau, boot and shoe manufacturer in a moderate way in the city of Quebec. He was long employed as a factory foreman, beginning for himself as a manufacturer in 1889. He approached his creditors a few days ago with a proposition to pay 25 cents, but has since amended his offer to 50 cents in the dollar. A general statement of his affairs has not yet been submitted.

The project has been taken hold of. A week ago there was a public meeting at Newcastle to consider it, when telegrams and letters were received from Messrs. L. J. Tweedie, James Robinson and others unable to attend, but promising assistance. A provincial committee, of which Collector Park is chairman, has been appointed to urge upon the parishes and towns of Northumberland County the selection of a general committee to secure some suitable memorial to Mr. Mitchell.

Among the welcome attentions of September from friends of the Monetary Times, is the pretty little calendar for this month, issued by the Intercolonial Railway. Not knowing exactly whom to thank, whether Mr. Tiffin, Mr. Pottinger, or the more august authorities at Ottawa, we simply express our regret that we cannot be down in the Evangeline country, the Sussex Vale country, or the marvels of Cape Breton, during the present charming month. This, however, shall not prevent our recommending any one else, who has time and appreciation of natural beauty, to take his or her holiday by this road.

East Toronto council will probably accept the tender of McQuillan & Co., Toronto, for laying a new intake main from Lake Ontario to the force main, the price named being $19,000.

Much new machinery has recently been put up at the White Bear mine, Rossland. The stamp battery is practically completed, and the battery of Wilfley tables is already assuming shape, a report says. The electric motors for the mill, it is expected, will be ready this week for the starting of the water section of the plant. Several cars of plant were delivered at the mill during the week, including a quantity of machinery to be utilized in the Elmore end of the plant. Visitors to the mill last week were impressed with the magnitude of the plant and the excellent arrangements promising economy and efficiency in the handling of ore.

Mercantile Summary

A company, which recently received a charter from the British Columbia Government, is the Northern Gold Mines Company, Limited; capital, $1,500,000. It will acquire, develop, work and sell mines.

The Kerr & Coombes Foundry Company, Limited, Hamilton, is authorized by a recently granted Ontario charter to engage in the business of making and selling iron castings and machine work connected with foundry work. Capital, $50,000.

The Standard Oil Company, of British Columbia, Limited, has received a provincial charter. Its capital is placed at $1,000,000, and it is authorized to pur chase, lease or otherwise acquire lands bearing petroleum or other mineral oils, gas and coal.

The Collingwood, (Ont.), Elevator Co., Limited, is authorized to acquire and operate elevators, warehouses, flour mills, etc., also to acquire, store and transport all kinds of grain. The share capital of the company is $250,000. John James Daley, of Chicago, and W. T. Toner, of Collingwood, Ont., are provisional directors.

Mr. J. C. Morrison, of Chicago, has invented a process for converting peat into good burning coal, and proposes to put his discovery to practical test at Ellice township, near Stratford, Ont., where there are enormous peat beds. It is estimated that by his process the fuel can be produced at something like 90c. per ton.

A handsome piece of silver plate was on Monday last presented by the Montreal Harbor Commissioners to their secretary, Major Seath, on the occasion of his approaching marriage. The plate was enclosed in a highly polished mahogany cabinet, satin lined, and on the salver was inscribed the crest of the Harbor Board, the names of the Commissioners, and the occasion of the event. The chairman of the Board, Hon. Robert Mackay, made the presentation. Short speeches were also made by Mr. James Crathern, representing the Board of Trade; Mr. Robert Reford, representing the shipping interest; Mr. Robert Bickerdike, Mr. W. E. Doran, etc.

An important man in commercial circles of the United States, died on Saturday last in London, namely, Mr. Charles Finney Clark, president of the Bradstreet Company. He was born in New York State in 1836. For a time he published a Detroit city directory, and was associated with Carl. Schurz in the publication of the Detroit Post. Mr. Clark, however, found his lifework in the development of Bradstreet's Mercantile Agency, being successively in charge of the Detroit, Philadelphia, and Boston offices, and at last general manager with headquarters at New York. The business was incorporated in 1876, as the Bradstreet Company, Mr. Clark becoming secretary, and later being elected to the presidency. He was a member of the New York Chamber of Commerce and various societies and clubs.

Tenders are shortly to be asked for the construction of a 50-foot lift lock at Kirkfield, on the Balsam and Simcoe division of the Trent Canal.

The loss of lumber attributed to fires around Point Grey and other places in the vicinity of Vancouver, already aggregates to $6,000,000, it is estimated, and at last account there was no sign of rain.

The Newcastle Advocate says the lumber cut on the Miramichi river will probably be curtailed one-half during the coming winter. A prominent lumberman told a reporter for the Advocate that all lumber sold at the present time was actually at a loss. There has been a reduction of $4 on deals. It is understood that Messrs. Robinson, Lynch, et al., will cut only about one-half of their usual quantity.

We understand that the Canadian Pacific Railway Company, after experimenting, has now perfected a system of train telephoning, which they are about to adopt generally. Each baggage car and each freight van will be equipped with a telephone, a long wire and a pole with a hook, which is simply hooked on to the telegraph wire at any point, and the despatcher's office at Montreal can be reached instantly without interfering with the use of the wire in telegraphing.

the size made and used in New York and Paris and put up in 50 and 100 lb. boxes.

Mercantile Summary.

It is said that oil has been struck at Melrose, a place about twelve miles east of Belleville, Ont.

At a meeting of the council of the Fredericton Board of Trade, a resolution was adopted approving of the action of the Dominion Government in acquiring the Canada Eastern Railway and making it part of the Intercolonial system.

A report from Calgary says a "mountain" of hard coal has been discovered in the Misty Range, about 45 miles west of Okotoks, Alta., and comprising some 16,000 acres. It has been bought, so it is said, by a Toronto coal company for $320,000.

A scheme is on foot to build a railway from Morrissey, B.C., into the Flathead oil and coal territory, in the Crow's Nest district. As a bonus, the company, of which Mr. Corbin, of Victoria, is at the head, is expected to receive about 60,000 acres within the coal district.

The Alberta Central Land Corporation, which is said to have 120,000 acres of land for sale in Canada, just this side of the Rocky Mountains, have opened an office in Toronto. The president of the company is Mr. George H. Gooderham, and the general manager, Mr. E. W. Day.

The Consumers' Gas Company, Toronto, has announced its intention to offer for sale on the 6th of December, 5,000 shares of new stock of a par value of $250,000. Whether the city will purchase this stock or any of it is to be put to a vote of the ratepayers.

The seventh Canadian Conference of Charities and Correction is to meet at London on October 5th to 7th next. In view of the benevolent character of the movement, the railways have granted a single fare rate, and the Ladies' Committee of London offer to provide for delegates in private homes. Among the subjects to be considered are the important ones of child saving, institution and prison management, poor relief, care of the insane, the feeble-minded, etc. Anyone interested is welcome to attend these meetings

The will of the late J. J. Long, of Collingwood, Ont., having been filed for probate, it appears that his estate is valued at $419,815. After providing for several bequests of a charitable nature, the will directs that the business of T. Long & Company is to be carried on for four years, but that the present estate is to be wound up within four years, and 50 per cent. of the residue divided among the family of Thomas Long, 25 per cent. among the family of Michael Long, and 25 per cent. among the family of his sister, Mary Byrnes.

School Debentures
FOR SALE.

The Town of Rainy River is offering for sale $25,000 school debentures, bearing 5 per cent. interest, repayable in thirty equal annual payments of $1,626.29 each, the first dated July 19, 1904.

The present bonded debt of the town is $1,500; the assessment for 1904 is $386,515; the population is 2,000. For any further particulars apply to

A. E. MARK, Sec.-Treas.
Rainy River, Aug. 18, 1904.

Sale of Debentures.

Tenders wanted for the purchase of $42,000 Debentures at 4% of the Brandon School District No. 129, as per by-law passed by the ratepayers of said city, and approved by the Department of Education. Same repayable in twenty years.

All tenders to be in the hands of the undersigned on or before 1st October, 1904.

Wm. WALKER,
Secretary-Treasurer.
Box 549, Brandon, Man.

POSITION WANTED.

Expert salesman, thirty years of age, years of experience in east, good general knowledge of all lines, wishes territory in Alberta or British Columbia for reliable house, at once. Address,
G. M. SEWALL, Red Deer, Alberta.

All the strikers carry pistols.

All the strike breakers carry pistols.

All the street car conductors and motormen carry pistols.

All the "innocent spectators" carry pistols.

All of Mayor Harrison's "hoodlums and ruffians" carry pistols—likewise by divine right. A man without a pistol in Packingtown would be as strange a spectacle as a man without trousers. Is it any wonder that this town reeks of lawlessness and murder?—Chicago Chronicle.

◆

RIVER TRADE DECLINING.

It is to be noted in the statistics published in this issue that of these two great divisions of internal transportation, river and lake, the lake trade has been growing phenomenally, while the river trade has been declining. The decline of the river trade is to be accounted for by the great development of the railway systems of the United States and owing to shallow draught and consequently limited carrying capacity river steamers are unable to compete with the railways. River transportation has been declining for years, and during the past ten years the decline has been marked.—Marine Review.

◆

TORONTO MARKETS.

Toronto, Sept. 8th, 1904.

Chemicals, Drugs, Etc.—A movement in the direction of improvement is discernible in the local drug trade, and prices are distinctively firm in several lines. Cantharides have gone up 10c. Rhubarb and chamomile flowers are firmer. On the other hand, cascara has receded slightly. Quinine is experiencing a brisk demand, and higher prices are looked for by some. English reports speak of but a moderate volume of business, both in the home and the export trade. The general tone of the market, however, is hopeful. Not much business has been done in the heavy alkalies branch, and the same applies to bleaching powder though there is increasing enquiry for next year's delivery. Soda crystals, ammonia, alkali, and soda bicarbonate are steady.

Dry Goods.—Great activity has been the order of the day in the wholesale dry goods houses this week, mainly due to the presence in the city of such large numbers of country and other visitors. Many purchases, both small and large, have been made. Judging from the opinions expressed, as representing many diverse sections, the prospects for a good trade for the balance of the year are quite good. Prices have made little change since last report. It appears impossible to arrive at any intelligent opinion as to the future of cotton, either of the raw material or of finished goods, and all concerned are "going slow" in their purchasing of those lines. Woolen goods retain their strength. Payments from the trade generally have been a fair average.

Flour and Grain.—Winter wheat has made another gain of 3 to 4c. Oats, however, have dropped a cent. Other grains remain unchanged. Flour continues very firm. The price asked for ninety per cent. patents, in buyers' bags, middle or western freights, is $4.40, with extra choice brands a little higher. No change has occurred in millfeed, nor in oatmeal, which continues at $4.75 per barrel on the track.

Are the Standard of Purity and Excellence.

Fruits and Vegetables.—This week on one or two days there has been a more than usual quantity of fruit received in the city, but though some easiness was easily discernible, it was as a rule cleaned up in pretty good shape, owing to the demand being very active. Potatoes are rather high, owing to rot in many sections. Other vegetables, too, such as corn and tomatoes, have suffered owing to the cold and wet weather this season. We quote: Lawton berries, 7 to 10c.; huckleberries, basket, $1 to $1.10; peaches, white flesh, basket, 25 to 50c.; do., yellow, 40c. to $1; apples, basket, 15 to 25c.; pears, 35 to 50c.; plums, 40 to 75c.; Canadian cantaloupes, 24-qt., 25 to 40c.; grapes, Moore's early, 30 to 75c.; do., champions, 20 to 25c. Foreign fruits: Oranges, California valencias, $4.50 to $4.60; lemons, Messinas, $3 to $3.50; do., Verdillis, $4; do., St. Nicholas, $4; bananas, 1's, bunch, $1.25 to $1.75; do. 8's, bunch, $1.10 to $1.25; do., red, $1.50 to $2.25; pineapples, Florida, case, $4.25 to $4.50; do., half-case, $2.25; watermelons, each, 20 to 25c.; Delaware peaches, ½-bushel, $2; California plums, $1.25 to $2; do., pears, $3 to $3.25; do., peaches, $1.75; Tokay, grapes, $2.50 to $3; tomatoes, 15 to 30c.; cucumbers, basket, 10 to 15c.; beans, basket, 20 to 30c.; green peppers, basket, 30 to 40c.; new potatoes, bush., 65 to 80c.; egg plant, basket, 35 to 40c.; Can. green corn, doz., 8 to 10c.; Kalamazoo celery, doz., 45c.; Canadian celery, basket, 45c.; do. pink, 50 to 65c.; sweet potatoes, $3.50 to $4.50.

Hardware.—The disturbance in the building trade has affected somewhat adversely the demand for such hardware goods as are required therein. Other lines are in fair demand. Price changes are few and inappreciable. In metals there seems a tendency both here and across the line to move more freely. A Glasgow advice says pig iron, after advancing during the first half of August, has latterly become easy. The higher-priced metals present no feature of peculiar interest.

Provisions.—While the demand for choice dairy and creamery is very fair, sale is very slow for medium to common quantities. There is a fairly good demand for cheese, and the market is steady. The quotation for eggs, 18c., is unchanged, and the demand larger than the supply. The demand is brisk for hog products, and with light stocks in hand, prices are becoming firmer.

Hides, Skins and Leather.—Normal receipts of hides are coming in, and the market is about steady. For lambskins no changes in prices have occurred, and they are firm. The same applies to calfskins. The leather market shows marked improvement, and many orders have been placed by buyers visiting Toronto during Exhibition.

Wool.—At the moment there is practically no demand for fleece from the United States, and buyers hesitate to repeat former offers. The market for pulled wools is firm at former prices.

MONTREAL MARKETS.

Montreal, 7th September, 1904.

Ashes.—A very light movement is reported at the moment, and values are not over firm for pots; firsts are quoted at $5.65 to $5.70, seconds at $5.25 to $5.30. For pearls $8 would still readily be paid, but no supplies are available.

Hides.—The anticipated advance in lambskins has developed, and dealers are now buying them at 70 cents each. Beef hides are steady at former figures, dealers buying on the basis of 9c. per pound for No. 1, and quoting half a cent advance thereon to tanners.

Boots and Shoes.—Travelling salesmen for boot and shoe manufacturing houses are now pretty generally out with spring samples. It is too soon to know with what success, but the feeling among the boot and shoe trade seems to be that trade has been unsatisfactory in the country.

Dairy Products.—For almost the first time this season the figures of last week's cheese shipments exceed those of the corresponding period in 1903, the returns being as 116,833 to 80,515 boxes, against 36,300 boxes, but for the season to date there is a deficiency in export of 338,000 boxes to make up. There have been liberal recent shipments of butter, exports for last week of that article, reaching 33,540 packages, figures which show an increase of 11,000 packages over the same week a year ago, and the total gain for the season thus far is just about a round 100,000 packages. The week has shown no great variation in values of butter, finest creamery ranging from 18¼ to 19c. Cheese has scored some advance, and finest Western makes are now quoted on spot round 9¼ to 9⅜c.; Townships, 9 to 9⅛c., and Quebecs at 8⅞ to 9c. Fair undergrades readily bring 8½c., it is said.

Dry Goods.—Some wholesale houses report a certain number of fair-sized orders from visiting buyers, but the great proportion of retailers are pursuing a "hand to mouth" policy in the placing of their commands. Some cancellations are reported from Prince Edward Island, and some other sections where crops are not realizing first expectations. Fourth of September payments and general collections are reported a fair average. Some of the larger houses report that August panned out better in this respect than was first judged. The Dominion Cotton Co., and the Canadian Colored Cotton Co. have issued price lists for spring prints, showing a slight advance in price, mainly in the cheaper lines.

Groceries.—The sugar market presents a very strong front. Immediately after writing last week an all round advance of 5 cents a cental was announced by the local refiners, making the present factory figure for standard granulated $4.65, and a further advance is momentarily expected. The New York sugar market is said to be active and excited, and owing to the general drought the European beet crop is estimated to be 600,000 tons short. Molasses is held very firmly, and stocks in first hands are extremely light, probably not exceeding 2,000 puncheons. Jobbers are quoting 28c. per gallon by the single puncheon, but importers are not over anxious to sell at 27c., preferring to hold, in the belief of higher prices to come. Prices of new pack tomatoes and corn have not yet been announced. The "Escalona," the first direct Mediterranean fruit steamer has completed loading currants at Patras, and is due at Denia to-day to fill up with Valencia raisins. The reported tendency in these latter goods is upward. The comparatively low quotations for currants are not readily explainable, in view of an estimated shortage of 25 to 30 per cent. as compared with last year. New samples of Sultana raisins show bright goods, but prices rule high. New crop Comadre figs are now ready for shipment, and quality is said to be excellent. Shelled almonds have opened very high, there being a serious shortage in Sicily.

Hardware and Metals.—A general meeting of the Hardware Association is being held to-day, but it is not known that any special changes as to terms or prices are contemplated. Hardware orders are coming a little more freely, but in heavy metals the demand is by no means active. Values show little change. Summerlee pig-iron, No. 2 selected is quoted $17.75, ex-wharf, net terms, and it is said Hamilton iron has been offered at about similar figures. Bars and other lines of manufactured iron are being sold at old quotations. In the English market a slight advance is reported in coke tins, Canada plates and Ternes. In general metals, the only change is an advance in ingot tin, which is now quoted at 31 to 32c. per pound.

Leather.—Manufacturers of boots and shoes are not very free buyers of leather at the moment. Values, however, are steadily held. Sole is quoted on the bases of about 23½c. for manufacturers' No. 2. In black leathers especially there is little doing. Western splits are quoted at 21 to 22c.; Quebec, ditto, about 17c.; buff and pebble, 12c.; grain, 14c.; harness, 28 to 30c.; chrome calf, 19 to 22c.; russet, 40c.

Oils, Paints and Glass.—No appreciable improvement is yet to be noted in the general distribution. Advices are to hand stating that the Belgian glass manufacturers have shut down for September and October, for the reasons mentioned in last report, and prices of glass are said to be advancing there, but local dealers are apparently still pursuing their old cutting policy. Turpentine is easier at 82½c. per gallon in single barrels. Other lines remain as they were.

NEW YORK FINANCIAL POSITION.

Henry Clews & Co., New York, in their circular, under date of September 3rd, 1904, say: The stock market has been strong and weak in spots. Some of the active shares, which experienced a good rise, yielded under sales to realize, while others hitherto neglected were advanced by manipulation. In outside influences the changes have been so slight that market fluctuations were chiefly the result of technical conditions and the general outlook remains as about a week ago—distinctly hopeful, though not entirely free from unsettling conditions. Crop prospects continue the controlling factor in both financial and business circles. August is generally a month of deterioration, and September, too, has its perils from frost. Thus far, however, the crops have escaped serious injury.

Railroad managers are taking on a distinctly more optimistic spirit, the result of course of a good harvest. Current gross earnings show smaller losses than in the first half of the year, and during the next three months traffic returns are likely to more nearly approach the record-breaking figures of 1903. Quite a number of the larger railroads report important gains in net earnings, owing to the economies which have been put into force. Business conditions seem fairly satisfactory, the outlook being for a good average volume of business this autumn, but no boom. One of the greatest hindrances to business activity has been the high level of commodity prices; another obstacle, the unsettled condition of the labor market. There are indications of a change for the better in both these respects. Cotton and wheat have descended from their recent high speculative level; and what is especially important, iron and steel prices are settling down to normal and more stable levels. Prices of iron and steel have been too long held at almost prohibitive figures by the various pools and the Trust. At last these are giving way, owing to absence of business at old prices, and healthier conditions are in prospect. Iron and steel enter so extensively into all sorts of enterprise that the return of this industry to the normal is sure to exercise a stimulating effect in other directions, and ere long reduced prices should be followed by an accumulation of orders held back for just such contingencies; hence probably the advance in the United States Steel securities when prices of products are being marked sharply down. The labor situation, however, remains the worst feature of the business outlook. Sane leadership is still lamentably lacking in the great labor movement now sweeping the country. Bitter experience may rectify the present errors of labor leadership, for nearly all of the recent ill-advised movements and strikes on the part of labor have come to failure. Both the meat strike and the builders' strike have practically collapsed, and the labor cause has clearly suffered in prestige in consequence. The war between capital

CIGARETTES

STANDARD OF THE WORLD

SOLD BY ALL LEADING WHOLESALE HOUSES.

and labor may not yet be ended; but the crisis seems to have been passed, and important lessons have been learned on both sides, which should at least serve to diminish friction and trouble in the future. The Presidential campaign, strange to say, is scarcely a factor in the situation. Not since the war has the election of a President created so little excitement; mainly because of the absence of distributing issues. Even the tariff, the principal subject of controversy, is not likely to undergo any serious change for some time to come.

The money market remains easy in spite of more liberal currency shipments. The latter will probably increase in force and cause a steady diminution of surplus reserves at this point; but there are more than sufficient funds in sight to meet all probable requirements. There has been some fear of gold exports, owing to likelihood of small wheat exports, though a good supply of cotton bills will be shortly forthcoming, and the big corn crop will undoubtedly be followed by larger exports of that article, either in the grain or in the form of meat products. Reduced imports of general merchandise now being experienced, will also tend to discourage gold shipments.

Now that the vacation period is over, and business promises to become more active, speculation shows a reviving tendency. Manipulation is daily growing more aggressive and the operations of various pools and cliques are of increasing importance. The market, therefore, will bear closer watching; for, while the tendency under existing conditions may be towards higher prices, the inducements for realizing grow stronger with the advance.

POINTERS FOR GOOD ROADS.

It is instructive to observe how steadily the feeling is growing that drainage and not thickness of metaling is the main essential in road making, says the Engineering Record. However much we may respect the memories of Macadam, Telford and other great road builders who first led public authorities toward a sensible method of construction for country highways, the fact remains that many of their recommendations are now known to be misleading. Their advice was important at the time when it was given, but it is not in keeping with the broader knowledge of the present time, gained by careful examination of roads built in strict conformity with well-known specifications. Years ago the theory of thin roads, with a V-shaped drain along the centre, received favor. This V-shaped drain is as effective both for removing the water and supporting the metaling as side drains and a Telford base. Its cost is approximately 77 cents per lineal foot of road less than construction with a Telford base and two drains, and 35 cents less than the same base with a single side drain. This system of construction is directly opposite to that advocated in most of the accepted manuals on the subject. The old idea has been to get the water off the roadbed just as quickly as possible. To accomplish this the subgrade has been crowned and rolled and the lower courses of stone are coarse and often of considerable thickness. By the new system of construction the water remains on the roadbed and is collected by the outlet drains at fifty-foot points, the drainage not being distributed along each side of the road, but concentrated at a regular series of points.

◆

LIFE INSURANCE IN JAPAN.

The Japan Daily Mail, of Yokohama, quotes Mr. J. T. Hamilton, general manager for the East, of the Equitable Life of New York, to the effect that the excitement and suspense anterior to and ever since the beginning of the war with Russia have paralysed many branches of business, life assurance amongst the number; so that, practically, the operations of the great companies have been suspended, but their expenses still go on without material diminution. When the war comes to a close, a consummation devoutly to be wished, prospects seem eminently favorable. Should the settlement of the questions for which the war has been undertaken be according to the principles laid down by Japan, there will be immediate revival of confidence, expansion of trade and an era of prosperity of a magnitude scarcely realized at the present time; and in this increased commerce Japan must have a large share. This means national prosperity, in which all men engaged in commerce and in commercial enterprises of every description will participate."

Full Information Freely Given.
A. C. C. DINNICK, Managing Director

THE
Smoke Nuisance.

Every proprietor of a high chimney will hail with pleasure the information that there is now a contrivance which can be had at a reasonable cost and easy of installation, for the prevention of the clouds of smoke which have been such a detriment to the comfort of the neighborhood, besides a loss to power users.

The one herein offered not only complies with the Municipal By-law in cutting off smoke, but also prevents grits and smudge from coming from the chimney.

In itself this alone would be worth the cost of the appliance, but the savings it makes in the coal bill will pay for itself in a very short time.

As evidence of our confidence to prove our statement we will instal our device on a boiler for thirty days without charge.

Ask for information about it.

We will be pleased to answer all enquiries.

The Whaley Automatic Smoke Preventer and Fuel Saver, Limited.
New Offices — Room 25 Manning Arcade, 24 King Street West,
Phone Main, 4893. TORONTO, Canada.

On Tuesday last, according to a New York telegram, George R. Beach, who was appointed temporary receiver for the International Mercantile Agency on August 26th, was made permanent receiver. Mr. Beach reported that he had found $4,000 in cash, and printing plates worth from $10,000 to $12,000, in the office in New York. He said that the United States court had taken jurisdiction and had appointed him receiver, and that he had also been appointed receiver in New York.

Agencies in Every Town and City in Canada.

The annual general meeting of shareholders of Frothingham & Workman, Limited, was held in Montreal on the 6th inst. A satisfactory report was laid before the meeting. The following directors were elected: Edward Archibald, president; Chas. D. Monk, W. G. Lemesurier, E. C. Eaton, G. C. Davis. Mr. Eaton is managing-director, and Mr. Harold G. Eadie, secretary-treasurer.

BARREL STAVES IN ENGLAND.

Mr. P. B. MacNamara, Canada's commercial agent in Manchester, has been looking into the subject of the demand of beer barrel staves and heads knocked down to be hooped in England. He finds that 35,370,000 barrels of beer were passed for duty through the Inland Revenue Department for the fiscal year ending 31st March last. That a very large market for beer barrels and casks exists in this country goes without saying, and he considers it worth the attention of the Canadian maker to investigate. He says that Memel oak is the kind most used here, but asks why should it be preferred to Canadian oak. Some brewers admitted ignorance of the quality of Canadian oak, and would like samples submitted. Memel oak is obtained from the Baltic port of that name, and is said to be of a harder and more durable nature than other timber, and is not so liable to become 'stinkers." Messrs. Guiness & Sons, of Dublin, it is stated, use a considerable quantity of Canadian oak and it seems quite suitable to their trade, and why cannot it become more generally used by other large brewers in the United Kingdom. Baltic oak commands a higher price than Canadian. A great many coopers use Canadian, yet a larger market can be created here for it if properly placed, than it now possesses.

◆

MILLERS MEET.

The Dominion Millers' Association held their annual convention in Toronto a few days ago, and seventy-five members were present, representing nearly all parts of Ontario. Their reports were uniformly depressing, and showed that in both quality and quantity the provincial crop was the poorest in years, Two counties, Essex and Kent, reported total failure, while of the others, the majority reported about a one-third crop. A liberal estimate of the yield in Ontario this year would place it at between seven and eight million bushels, compared with 21,000,000 last year. However, probably this will be offset in some measure by the high prices. Fall wheat was described by Mr. C. B. Watts, the secretary of the Association, as the poorest in quality and smallest in quantity the province had ever experienced, while spring wheat was much damaged by rust. It is interesting to note that the Association have thought it worth while to communicate with the Chamberlain Tariff Commission, and to urge the putting of flour on the same basis as grain in regard to preferential trade. They pointed out that British millers could not hope to supply the entire needs of the country, and that they were sufficiently protected from colonial competition by freight rates. The report of the Committee on Transportation protested against the action of the G.T.R. and C.P.R. in charging Ontario grain men a higher freight rate on grain to the seaboard than they charged Michigan dealers. The railway companies' discrimination in favor of the West in the matter of freight rates on grain shipments to the Maritime Provinces was also adversely commented upon. The following officers were elected for the ensuing year:—President, H. Shaw, Toronto; 1st vice-president, George Goldie, Ayr; 2nd vice-president, S. W. Vogan, Walkerton; treasurer, William Galbraith, Toronto; secretary, C. B. Watts, Toronto. Executive Committee, W. G. Bailey, Hamilton; H. Burritt, Port Hope; J. D. Flavelle, Lindsay; J. I. A. Hunt, London; M. McLaughlin, Toronto; H. L. Rice, St. Mary's.

◆

CANADIAN MANUFACTURERS' ASSOCIATION.

The annual convention of the Canadian Manufacturers 'Association will be held in Montreal, on Tuesday, Wednesday, and Thursday, 20th, 21st, and 22nd September, 1904. The headquarters of the Association will be the Windsor Hotel, but it is probable that the sleeping quarters of the members will be at various additional hotels, e.g., the Queen's, the Place Viger, the St. Lawrence Hall, and La Corona. A large gathering of members is expected, and the Montreal members of the body are sparing no pains to make pleasant the stay of those from a distance. It is significant that both the big telegraph companies have granted to all duly registered delegates at the Convention, the privilege of sending social messages over their telegraph lines, from Montreal to any point in Canada, free of charge, during the three days of the Convention. Still more noteworthy, because unusual, is it that the Bell Telephone Company has granted to all registered delegates the free use of its local telephone system from the Windsor Hotel to any part of the city.

THE METROPOLITAN LIFE INSURANCE CO.

(INCORPORATED BY THE STATE OF NEW YORK.)

The Company OF the People, BY the People, FOR the People.

ASSETS, $105,656,311.60

Proof of Public Confidence

This Company has more premium-paying business in force in the United States than any other Company, and for each of the last 10 Years has had more New Insurance accepted and issued in America than any other Company.

The Number of Policies in force is greater than that of any other Company in America, greater than all the Regular Life Insurance Companies put together (less one) and can only be appreciated by comparison. It is a greater number than the Combined Population of Greater New York, Chicago, Philadelphia, Boston, Toronto and Montreal.

Significant Facts

This Company's Policy-claims paid in 1903 averaged in number one for each minute and a third of each business day of 8 hours each, and, in amount, $89.00 a minute the year through.

THE DAILY AVERAGE OF THE COMPANY'S BUSINESS DURING 1903.

359	per day in number of Claims Paid.
6,297	per day in number of Policies Issued.
$1,303,559.06	per day in New Insurance Written.
$98,582.76	per day in Payments to Policy holders and addition to Reserve.
$53,841.18	per day in Increase of Assets

Full particulars regarding the plans of the Metropolitan may be obtained of any of its Agents in all the principal cities of the United States and Canada, or from the Home Office, 1 Madison Ave. New York City.

Amount of Canadian Securities deposited with the Dominion Government for the protection of Policy-holders in Canada, $1,800,000.00.

... EIGHT FACTS ...

The following are a few facts regarding The Imperial Life Assurance Company of Canada. They give some of the many reasons why Canadians should carry a policy in the Imperial Life in preference to any other Company.

1 The Imperial Life has made a record unequalled in the history of Canadian Life Assurance. Is not this a guarantee of future progress and success? **1**

2 The Imperial Life maintains probably the strongest reserves of any Canadian life company—an evidence of the unquestionable security afforded policyholders. **2**

3 The Government Deposit of the Imperial Life is larger than that of any other Canadian life assurance company,—another evidence of unquestionable security to policyholders. **3**

4 The Imperial Life's percentage of assets to liabilities to policyholders is 138%, being a larger percentage than that of any other Canadian company whose capital is not impaired. **4**

5 The mortality actually experienced by the Imperial Life since its commencement has been only 53% of the expected mortality,—an evidence of the careful selection of its risks, and an indication of satisfactory profits under Imperial policies. **5**

6 The average rate of interest earned by the Imperial Life in 1903 was 5.29%, a rate considerably higher than the average earned by Canadian, British or United States Companies,—another indication that profits paid under Imperial policies will be satisfactory. **6**

7 The Imperial Life issues a policy that, in the liberality of its provisions and absolute security to the holder, is unexcelled by that of any other life assurance company. **7**

8 The Imperial Life's "Guaranteed Security Policy" is a policy peculiar to the Company, and is an ideal contract from the policyholders' standpoint. It has been termed "The Policy of Guarantees." **8**

THE WESTERN HARVEST.

Our Winnipeg correspondent sends, under date noon yesterday, the following despatch: "The weather during the past week throughout the West has been cool, with general rains in the last few days, which have hampered harvesting. It has now cleared, with indications of warmer weather. Light frosts have been general throughout the country, but only in a few localities were they heavy enough to do any damage to grain, and, as about 80 per cent. of grain cutting is completed, damage from this cause will be very slight. Threshing has started in many districts, and returns are most satisfactory in the majority of instances. Several authorities estimate that the crop will equal that of last year."

Wiring from Swift Current, the party of Canadian Pacific directors now on an inspecting tour in the West expressed the opinion that the crop in the Territories would be even greater than last year. And Sir George Drummond sent a despatch on Wednesday night from a point in Assiniboia to the general manager of the Bank of Montreal of the following tenor: "Rain fell in Winnipeg yesterday afternoon and night, but to-day is clear, bright and dry. In our trip to-day we saw everywhere the wheat cut and a good deal in stacks, and, consequently, safe. So far as my judgment goes, the damage, if any, must be quite trifling."

◆

WHEAT AND FLOUR.

Wheat has made still further advances in price, and, with it, flour. Partially, no doubt, this is due to the damage already caused by rust and frost to the growing crop, though probably these factors will be found eventually not to have been so detrimental as some have endeavored to show; that is, unless the end of the harvesting period in the West be attended with more unfavorable conditions than those which have made themselves felt so far. A more powerful cause, however, for the growing strength of the market is the shortage of wheat in the United States. We see that the United States Government's final estimate of the wheat crop in that country indicates a yield of about 540,0000,000 bushels, the smallest crop since 1900, and 100,000,000 less than last year's. As the home consumption is figured at something like 480,000,000 bushels, the balance available for export is a mere bagatelle, and, indeed, the high price at which wheat is held, $1.10 in New York, practically precludes, at any rate for the moment, any chance for export at all. One peculiar feature of the condition of the market across the border, and one which, if it be true, is of great significance, is the reported offer to land Russian wheat at Atlantic ports of the United States at a smaller price than that at which that grain is now held at the latter.

The milling interests are attracting to themselves just now a large share of public attention in three countries, Canada, Great Britain, and the United States. In Britain, millers find themselves confronted by the fact that importations of flour into the United Kingdom during the last year or two reached a point higher than ever known. From the United States it looks as if the flour exports will become less and less, while the proposal by Mr. Chamberlain to place a duty upon all flour entering the United Kingdom is exercising the minds not only of millers in the States, but in the Dominion as well.

The American flour milling industry, too, is in a peculiar, not to say unenviable, position, from the way in which the tariff works out. For the making of certain grades of flour the miller finds it absolutely necessary that he should have easy access to Manitoba No. 1 hard wheat. Yet he has to pay a duty on this of 25 cents per bushel, and of 20 per cent. ad valorem on flour. The millers of Minneapolis and other flour centres are using their energies in an attempt to obtain amendments to the drawback clauses which indemnify them for a large proportion of the amount they may have paid out in duty on wheat which they afterwards export. But the provisions making this rebate apply to only the identical wheat which has been actually imported and actually exported in the form of flour and make the law very awkward in practice. And it is pointed out by good authorities that even in a high protectionist country like the United States a high tariff on such an article as agricultural produce, of which a large surplus is usually raised for export, whereupon it comes into competition with the surplus from a country against which such tariff is raised, is altogether beside the mark. It is likely to be at such points as these that the thin end of the wedge in the form of reciprocity will ultimately make its entrance.

One thing seems sure, and that is that wheat (with its products), which in the world's eye is Canada's most prominent staple, is to be a very high-priced and valuable commodity for some time to come, and this is a fact which is bound to mean much for the development of the Dominion at this juncture in her history.

◆

THE IRON MARKET.

Considering the unstable conditions which have prevailed for metals across the line for some weeks past, the pig iron market in this continent may be described as almost surprisingly steady. Briefly summarized, the prices now quoted in the Toronto market are about as follows: Bar iron, $1.75 to $1.85 per hundred; pig iron, Middleboro', $18.75; No. 1 Midland, $17.50. And the demand keeps fairly steady at these rates. Canadian dealers are watching with interest the trend of the market in the United States, which is a little difficult, at the moment, to forecast. It is understood that the United States Steel Corporation is making considerable reductions in structural materials. In plates the recession is $5 per ton; in bars, of $1 or $2 per ton, and in billets, $4 to $5. The independent factories will no doubt follow suit, so for a while there is likely to be an open market. So far as can be learned the rail mills will retain the prices of sections at $28 per ton. In this connection the report is of interest that 100,000 tons of rails have been bought in the United States on account of the Grand Trunk Pacific and Temiskaming railroads. The sale was made in competition with British and other makers, and no doubt the price was affected by this consideration.

Some interesting statistics regarding the state of the iron industry in this country are to be gathered from a recently issued report of the American Iron and Steel Association. The production of pig iron for the first half of 1904 in Canada was 120,643 tons, compared with 132,488 for the second half of 1903, and with a little more than this for the first half of 1903. Of the total production in the first six months of the present year, 35,291 tons were basic pig, as against 69,025 tons in the first six months of last year. No Bessemer pig was made this year, but there was a small quantity in the second half of last year.

The unsold pig iron held by Canadian manufacturers on June 30th, 1904, none of which was intended for their own consumption, amounted to 36,868 gross tons, as compared with 19,168 tons on December 31st, 1903, and 13,585 tons on June 30th, 1903. Of the unsold stocks on June 30th, 1904, a little less than 4,000 tons were made with charcoal, the remainder being coke iron. On June 30th, 1904, Canada had fifteen completed blast furnaces, of which six were in blast and nine were idle. Of this total, eleven were equipped to use coke and four to use charcoal. In addition, one coke furnace was being built June 30th, 1904, and one coke and one charcoal furnace were partly erected, but work was suspended. During the first half of 1904, the total number of furnaces in Canada actually in blast for the whole or a part of the period was ten, of which seven used coke and three used charcoal. The number of furnaces idle during the whole period was five, of which four used coke when last in blast and one used charcoal.

◆

NOVA SCOTIA TRADE.

As may be gathered from the letter of our Halifax correspondent, the commercial people of that city are particularly busy. This is in a large measure due to the great number of persons attending the Provincial Exhibition, for that visitors are buying goods more freely than in former years is a circumstance on which merchants are commenting. Wholesale houses as well as the retail firms have profited by the presence of the visitors. In fact, irrespective of the buyers brought to the city by the Exhibition, wholesale trade has picked up considerably of late. The travellers' orders in the last ten days have been quite satisfactory. Mail orders also have been numerous. All this, taken in connection with accounts of improved activity in trade elsewhere in the Province, gives rise to the hope that conditions are improving, and that business for the remaining months of the year will not fall below the average.

An unfavorable feature among Nova Scotia's industries, however, is the disappointing nature of the Nova Scotia Bank fishing fleet's experience. Many of the vessels having returned from their summer voyage, it has become evident that the season's catch of codfish will be but little larger than that of last year, which was about the smallest on record. Fortunately for the fishermen and the general merchants, very high prices are ruling, so that in the aggregate the Nova Scotia fishery will yield at least the average financial return. The catch, however, was, we are told, very unevenly distributed, so that while some fishermen are amply repaid, others have very little to show for their summer's toil.

Several features in connection with the Nova Scotia Exhibition, now in progress at Halifax, deserve attention. The excellence of the industrial exhibits in the main building of that show deserves and commands attention. Every available space is occupied, and with very few exceptions the goods exhibited have been produced within the Province. To the Nova Scotian, doubtless, these evidences of the progress which several of the provincial towns are making in many lines of manufacture are most gratifying. Nor can it be otherwise than interesting to every Canadian who loves his country to hear that this important eastern portion of it shows such unmistakeable signs of industrial progress. Again, the improvement in the cattle exhibits at Halifax this year is marked. Not only in number but in quality is the display superior. It is very evident that the efforts which have been put forth for years by both the Dominion and Provincial Governments and other agencies to improve this branch of live stock have not been fruitless. Farmers in Nova Scotia are devoting intelligent effort to improving their breeds of cattle, and not without satisfactory return.

TRADE WITH MEXICO.

The recent growth of attention paid to Mexico, partly through the enterprise of Canadian capitalists and partly through the quick development the southern republic has made under the wonderful leadership of its president, Señor Diaz, makes of more than ordinary interest the efforts which are now being made to increase trade between that country and this. The Canadian Commercial Club, which is reported to have been recently founded in the city of Mexico, should do much to assist in the movement. Another helpful feature is the fact that the Mexicans as a people are disposed to look with a kindly eye, not perhaps particularly upon Canadians, because the latter have until a very recent date kept much in the background so far as advertising their products was concerned, but upon Britons generally. Indeed, other things being equal, we believe that Canadians would find more favor in the eyes of the *Mejicanos* than do their more immediate neighbors to the north, whose strong proclivities towards the game of grab are never quite forgotten by this strong-memoried race.

In connection with trade matters, some optimistic remarks are made by Mr. Leay, the British consul in Vera Cruz. According to him, the productive industries of Mexico are doing better than ever, while undoubted prosperity continues in the agricultural sections. The stringency in the money market, however, together with the uncertainty as to the future course of silver, has caused the defeat or postponement of many plans for the expansion of industry and the investment of capital in Mexico, while the country is passing through a period of development demanding a large influx of capital. The stringency, though, he asserts, is only temporary. It is satisfactory to note that British trade with Mexico showed a marked increase in 1903, the imports rising from £1,727.095 in the previous year to £2,244,090. The United Kingdom sends to Mexico two-thirds of its imported cotton manufactures, over one-half of the woolen and worsted manufactures, and about one-tenth of the steam-engines, locomotives, and agricultural and other machinery. In metals and the manufactures of metals Britain supplied Mexico last year with one-third of her total imports, and the consul is emphatic in asserting that if British exporters advertised freely, and established offices and stores in the country they could very largely increase their trade. Here is a strong hint for Canada. Mexico needs many of the goods which are produced at their best in Canada, and the present is an admirable time for exploiting their market.

THE TRUST COMPANY IDEA.

It was natural, considering the remarkable growth of trust companies in different parts of the world, that a book should be published describing their functions, their advantages, and the means, proper or improper, used in conducting them. There must be many persons who have but hazy ideas about trust companies; many, therefore, will welcome the present volume.* The author's nine divisions of the subject include a definition of the Trust Company Idea; descriptions of the growth of such companies in different countries; analyses of the varying scope of such organizations; and finally, the advantages offered by the trust company as an executor, administrator, or trustee. A good deal of the matter in the volume is identical with that contained in a series of articles under the same title written by the author of this volume and published in the Monetary Times during May and June last. But much new matter has been added, and the appendix contains lists of trust companies in Canada, Great Britain, various Provinces of the Australian Confederation, etc.

It is important to bear in mind that the authorities of a trust company which assumes a fiduciary relation or capacity, such as executing the will of a deceased person, administering trust funds for orphans or helpless persons, is by that status debarred from indulging in speculative ventures. Therefore, such operations as guaranteeing titles to land, transacting a banking business, underwriting shares of companies, imply a different sort of trust company from that which acts in the capacity of trustee for the helpless, agent for the absentee, or guardian of trust funds. True, the term includes, in the United States, concerns which will undertake almost anything, and are not tied down by either their charters or the caution of their managers from floating companies, handling deposits from the public, investing in precarious enterprises, acting, in fact, as Mr. Heaton expresses it, as a financial department store. These, however, can never command, and ought not to command, in this country, the same confidence as an association which confines itself rigidly to such business and investments as cannot jeopardize the means of people who rely on it for their income as they would on a devoted relative or an individual trustee. Indeed, the ideal trust company is the one which takes the place of the trusted individual. The author says:

"The Trust Company Idea and its Development," by Ernest Heaton, B.A. Oxon, a member of the Ontario Bar. Price one dollar. Toronto: The Hunter, Rose Co., Limited.

The foundation of the trust company idea is the failure of the individual trustee. There are few people who cannot recall some instances where a widow, left sole executrix, has been badly advised, and lost all that she had; where the man whom everybody trusted, speculated with the moneys placed in his care, and was unable to make restitution, or where the fortunes of a family have been wrecked by the absconding of a trusted friend. The trust company offers insurance against loss from these sources; and it is as necessary as insurance against fire. To render this insurance effective it is necessary that the trust business of the country should be concentrated in a few companies, and that the whole time and thought of the officials should be devoted to the work. We must not forget that there are important interests at stake. The trust company is entrusted with the most sacred responsibilities. It is the guardian of family secrets; it has in its care the welfare and future of many families; it is the adviser of the helpless and unprotected, and it is the trusted agent of the absentee.

The historical feature of the book is interesting, judging from the respective dates of founding. Canada, which began in 1882 with one trust company, has been well to the front in exemplifying corporate trusteeship. New Zealand constituted the "Public Trust Office" as a department of the Government to take charge of the estate of deceased persons or lunatics in 1879, and has apparently chartered no companies for these purposes. In South Australia, West Australia and Queensland there is a public official deputed to act as trustee in the case of unclaimed and intestate estates, and there are fourteen trust companies in the Commonwealth, the first of which Provinces, showing the provisions made for control of individual trustees, the British Columbia Official Administrators Act, and so on. "In Quebec, too, we find the official individual trustee. This Province is governed bv laws founded upon the Roman civil code, under which the old rule still obtains that a corporation cannot be a trustee. . . . The old Roman office of curator still exists, and individuals are appointed trustees by the court under this title." We hope that Mr. Heaton may meet with sufficient success in the sale of this useful book to induce him to get out, later, as he contemplates, another and a more complete edition.

◆

THE CITY OF TORONTO.

The contrast of twenty years ago with to-day in the civic annals of Toronto is marked. Not so much in widened city limits, for where in 1885 the area was about thirteen square miles it is only seventeen and a fraction to-day. But in improved roadways and sidewalks, in sewers, water and gas mains, in extent of tramways, the growth is great. And as to the value of assessed property within the city limits, it has more than doubled, being a fraction under sixty-nine millions in 1885 and over a hundred and forty-two millions to-day. But the rate of assessment, which was at its lowest point, 14½ mills in the dollar, in 1889 to 1882, has gone up since 1894 from 16 to 17, 19, and even 19½ mills, standing this year at 19 mills in the dollar.

The gross debt of the city, including the city's share of local improvement works and her contribution to the street railway tracks (also the ratepayers share of the city's and Parkdale's improvement debt) is $21,407,512, against which there is a sinking fund of $6,091,246, leaving the net debt $15,316,366 at the close of the calendar year 1903. A million dollars a year is needed to pay the total debt charges ($1,002,707 in 1903). And out of a total of $3,794,46 expenditure by the estimates for that year, $1,488,56 is controllable and $2,305,903 uncontrollable.

These particulars are set forth in the Municipal Handbook of Toronto, 1904, compiled by Mr. W. A. Littlejohn, city clerk. In this convenient compilation is contained much that should interest the taxpayer, who may well consider, after its perusal, that he is "a citizen of no mean city." A fact which few probably know is brought out on page 16, namely, that independently of the amount raised in Toronto by taxation, the city has a revenue of more than a million dollars per annum. We quote the whole of that page, which is devoted to city assets and revenues:

> In considering the City debt, the value of the property and other assets possessed by the City should not be overlooked. The estimated value of this property is over $14,000,000, and a large amount of it is revenue producing. This valuation is exclusive of all the public works and services of the City, which have been provided at heavy cost to the taxpayers, and, though not available assets, are required for public use and convenience. The water lots owned by the City, the walks and gardens and other leasehold property, with the Market Block, yield an annual revenue of about $100,000, which will increase from year to year as the leases mature and are renewed. The total revenue from the City properties, exclusive of the Water Works, is about $100,000, and at 3½ per cent. represents a capital of over $2,850,000. In addition the City derives a revenue from licenses, police court fines, cattle market and weigh-house fees, and the street railway service (exclusive of that derived from the Water Works), of about $451,000. The estimated revenue this year from the Water Works is $428,100. These, with other revenues, bring the annual revenue of the City to upwards of $1,000,000, exclusive of the amount raised by taxation.

Population shows a growth in thirty years that is truly remarkable. From 45,000 people in the year 1864, Toronto has grown to 68,000 in 1874; to 105,000 in 1884; to 167,000 in 1894, and to 219,000 in the present year, according to the census taken by the assessors.

Within the boundaries of Toronto, which extends some six miles in length from east to west and more than two miles from south to north, there are 265 miles of streets and 84 miles of lanes. Of the improved roadways, which constitute 70 per cent. of the whole, 46½ miles are paved with asphalt, most of it the work of very recent years; 60¾ miles with cedar blocks; 57 miles with macadam and 14½ miles with brick. Of the sidewalks, about 400 miles in extent, 115 miles are laid in concrete, 8 miles in stone flags, 3 miles in brick, the remainder in wood, the proportion of which material is growing steadily less. The mileage of sewers is 238; of water mains, 267; of gas mains, 277—we omit fractions in all cases where not specified. The length of single track electric railway is 92.78 miles; and this railway carried 53,000,000 of passengers in the year 1903.

Since the date at which the town of York was incorporated as the city of Toronto, now seventy years, the citizens have chosen forty different mayors. In bygone days it was more the custom than to-day to give the mayor an extended term. For example, in the period between 1838 and 1850 four men in succession served three years each in the mayor's chair, namely, Messrs. John Powell, Henry Sherwood, W. H. Boulton and George Gurnett. But this length of service was exceeded by that of J. G. Bowes, who served for six years in two terms, 1851 to 1853 and 1861 to 1863. Subsequently, F. H. Medcalf held the mayoralty for nearly five years in all till his death, and coming down nearer our own day, E. F. Clarke was mayor from 1888 to 1891 inclusive. No citizen has since been such a popular favorite, measured by this standard.

THE TORONTO EXHIBITION.

Opinions, we believe, are generally agreed that in the particulars of cattle and horses the Toronto Fair is not surpassed on this continent. The spectacular part of the entertainment given at the Fair we are not so much concerned with; and will only remark that it is shrewdly conducted to please a variety of tastes, and that the bringing of English and Scottish bands across the Atlantic has proved a good thing in more respects than one. The exhibits in the manufactures and arts have, however, usually had more of our attention for the last quarter century than any other. And in these the improvement shown during that period has been really wonderful. We shall instance at this time only two branches of manufacture, in which progress has been especially marked: vehicles and pianos.

To visit the Transportation Building, and to see the array of carriages, wagons, sleighs, omnibuses, carts, there to be found is bewildering. They come from twenty different places, some of them as much as 500 miles apart, and they illustrate English and French styles, adroitly mingled with the greater lightness of the American. We speak now of the wheeled vehicles, for no country can surpass Canada in designs of sleighs and carioles for snow travel. One factory in south-western Ontario shows this year fifty summer and winter vehicles; another in eastern Ontario has a catalogue picturing twenty-two different sleighs. These vehicles are colored and decorated to suit various tastes among their customers, and, therefore, are sometimes more gaudy than good taste might dictate. But in finish they are as a rule admirable, and in strength of material and workmanship merit great commendation.

Unless the certificates given to Canadian pianos of late years by a considerable number of distinguished musicians are altogether dishonest, which is an incredible thing, these instruments merit high praise for sweetness, resonance, and substantial construction, while to the ordinary observer their exterior speaks for itself. They are made now in nearly every Province of the Dominion, and nearly 100 instruments from nineteen different makers, were to be seen at the Toronto Fair of 1904.

The number of Canadian pianos and organs that go abroad is very large. In five years ended with 1903 the value of musical instruments exported from Canada was $2,397,647, or at the rate of $480,000 worth a year. The largest item in the list was organs, whose average export per annum numbered 7,564, while of pianos it was only 342. But the value of the respective shipments for the period mentioned was, pianos, $67,165 per year; organs, $408,061 per year. They were sent to the United States, to seven European countries, to the West Indies, Japan and Australia.

In view of the continued success of this Exhibition, in respect of the growing number of exhibitors and the increasing crowds which it attracts, any one who has been observant must have seen that more permanent housing space is needed. The Manufactures Building commends itself, and does not need eulogy; the art gallery and the Dairy Building are likewise satisfactory. What the Fair needs is more buildings of this class, substantial, rain-proof, becoming. Seeing that the new cement structures in Exhibition Park have so well sufficed the need they were built to fill, it will be the part of wisdom to replace present unsatisfactory buildings with more modern ones. This cannot be done all at once, but something towards it should be done each year. And the movement, we feel sure, will meet the cordial approval of exhibitors as well as of the citizens who take a continuing interest in the Exhibition.

AUGUST FIRE WASTE.

The month of August, while a little less destructive in the matter of fires than its predecessor, showing a loss of $9,715,200, as against $11,923,200 for July, is still no improvement upon that month last year the loss for August then being $8,428,350. The summary compiled by the New York Journal of Commerce gives details as follows. Fire loss in United States and Canada:

	1902.	1903.	1904.
January	$ 15,032,800	$ 13,166,350	$ 21,790,200
February ...	21,010,500	16,090,800	90,051,000
March	12,056,600	9,907,650	11,212,150
April	13,894,600	13,549,000	23,623,000
May	14,866,000	16,366,800	15,221,400
June	10,245,350	14,684,350	10,646,700
July	10,028,000	12,838,600	11,923,200
August	7,425,550	8,428,350	9,715,200
Totals .	$104,559,400	$105,021,900	$194,172,850

There were 222 fires in that month, we are told, of a greater destructiveness than $10,000. Toledo, Buffalo and St. Louis each had big fires.

◆

—Having prevailed upon the captain of the team of Canadian bowlers who lately crossed the Atlantic to try conclusions with old countrymen at bowls on the green, we are able to give to-day Mr. Anderson's views upon the friendly advantage of such trips. When the Scottish curlers were here last year they were spoken of as being so pleased with what they saw that every one of the score would be, when he reached home, an immigration agent for Canada. In like manner it may be said that the twenty-four members of the bowling team who visited the British Islands this year were actually so many agents for conveying information about Canada. They came from ten different places in the Dominion, as far apart as Montreal and Chatham; among them were lawyers, manufacturers, capitalists, medical men, merchants; they were able to inform their auditors upon the changed conditions to be expected by any one migrating to Canada, upon the situation and character of farming lands, upon the successes achieved by thousands who came to this country poor. The Lord Provost of Aberdeen, indeed, stated that he considered the visit of the Canadian Bowling Team "worth a whole army of emigration agents." The accounts given of the extraordinary warmth of welcome the team received, coupled with the no less remarkable signs of amity shown to Canadian oarsmen and marksmen in the United Kingdom, must convince us that we hold a warm place in the affections of our brothers across the sea. While it would be churlish for Canadians to attempt to make merchandise of that sentiment, and to ask unreasonable things because of the strength of it, there is yet no impropriety in Canadians offering in a friendly spirit tidings of this land and what it has in store which may induce those looking for a new home to come our way.

—We do not hear, from thoughtful Americans at least, so much now as we used to do about the glories of liberty in that country. They are finding that there is such a thing as too much liberty, that the constant inculcation, especially amongst the young or the newly-arrived, of "independence," meaning freedom from restraint, is apt to result in their liberty degenerating into license, and that violence follows attempts to subdue it. Chicago has had abundant experience of this. In fact, the Boston Herald is cruel enough to say: "Chicago for a few years past has been an uninviting city. Some business has moved away from it. It has been a city of riots, murders, burglaries, highway robberies, and general administrative inefficiency. Crime has had sway, boodlers have flourished, and school teachers have had to wait for their pay."

THE SITUATION IN HOPS.

This is the time for harvesting the hops in many places, and both growers and dealers are anxiously watching the indications as to yield and quality of the plant. Estimates for the Canadian crop, taking all important sections under survey, range from about the same as last year to 25 per cent. in excess. In Quebec Province, a yield of something like half a ton to the acre is looked for. Some pickings made there last week are represented to have made the yield appear as if it will be considerably less than earlier optimistic estimates. The prices asked for by growers range from 30 to 35c. Whether they will receive this, however remains to be seen. Opening prices last year started at 22 to 27c. A little later, holders asked considerably higher, and though the brewers held out for some time, eventually they had to pay the figure asked, which in some cases was as much as 30 and 32c. per pound.

Of course a good deal depends upon the course of other markets. In talking this week with a gentleman who has just returned from a tour through County Kent, England, he informed us that the hop crop there will be moderate, but very good in quality. The weather, though very dry at one time, proved on the whole very favorable, and the crop was likely to be all gathered in early. Latest advices estimate the crop at not higher than 380,000 cwts.

In New York the hop market is quiet. Stocks of last year's, however, are quite light, so that the disposition is to hold prices well up. Crops in the Eastern States promise to be somewhat heavy. On the Pacific Coast this is the case also, and dealers are reported to be offering 22½c. and under for the new crop. Growers, however, are holding back from selling. The continental crop is described as being of somewhat large proportions, though in Germany late unfavorable weather conditions have interfered with this cultivation. As has been intimated above, the evidence coming in from the world's chief hop centres is as yet too contradictory to allow of a very firm conclusion being arrived at as to the correct values of that commodity, and the planters are holding back so much from shipping, that there has been as yet no chance for prices to become established.

THE UNDERWRITING OF CREDIT.

Wherever credit is given a risk of loss is involved. This risk of loss is as properly a subject of insurance as any other incident to business. These two propositions require neither argument nor amplification. It is, therefore, to say the least, remarkable that at the present moment it is not possible in Canada to obtain protection against the above risk. Each business man must necessarily be his own insurer. There would thus seem to be not only room, but need, for a credit insurance system. This need, however, is soon to be met by the Canadian Credit Indemnity Company, now in course of organization, under a charter conferring novel and exceptional powers. The list of provisional directors is sufficient guarantee that the company will be of substantial strength and the business conducted on sound principles. We note the names of Messrs. John W. Langmuir, John F. Ellis, William Stone, A. A. Allan, P. H. Burton, Peleg Howland, W. K. McNaught, J. J. Kenny, John R. Barber, C. Berkely Powell, and R. B. Osborne.

The range of the company's powers embraces three distinct features: First, the insuring against excess loss through bad debts; second, the underwriting and insuring of financial obligations of every kind, including bonds, debentures, mortgages, cheques, promissory notes, bills of exchange, etc.; and third, the granting of employers' liability insurance upon an equitable, inclusive and satisfactory basis. It will, therefore, be seen that the company is designed to cover a wide field of operation, and yet one that is for the most part practically unoccupied. Wisely conducted, the organization cannot fail of conferring great benefit upon the business community, and at the same time there is room for hope that it will prove a satisfactory investment for its shareholders.

A LETTER FROM THE PRAIRIE COUNTRY.

Labor Day is now very generally observed in all towns and villages throughout the West. As a holiday it comes in at a good time, for harvest is on and there is a lull in mercantile business that will continue until threshing is over and grain begins to come in. The farmer together with his help are at present in the fields living "the strenuous life" during long hours getting the crops cut. So the wearied merchant turns the key of his store, takes down his gun and hies him to the sloughs near by, where the ducks forgather, and sportively does he put in a royal day.

Getting off the train at Indian Head the other day, while yet at the station my eye glanced along the line of elevators all in a row, at exact intervals, indicating what a rich section of country this is. Eleven elevators in sight which are all getting ready to do business. Men are busily engaged effecting necessary repairs in them, cleaning, sweeping, making ready for the golden grain that will be teamed in from these busy fields almost immediately.

The Government Experimental Farm at this point has become quite a place of beauty; the fine groves of trees and shrubs form an excellent exhibit, and show what can be done in tree culture on the plains. There is encouragement, an abundance of it, for the Canadian western settler at every turn. The farm is a most useful institution on which public money is very wisely spent. One wonders that the city fathers of Indian Head have failed to take the lesson of tree culture to heart. What a charm it would give to the town were trees more in evidence within its boundaries. The streets of Indian Head are wide enough to allow for a double row of trees on both sides of the street. Building is very brisk just now, besides a number of private residences going up in different parts of the town a business block is being erected with fine stores. An opera house is also well under construction, and this will, when completed, be a great convenience, for a decent auditorium was badly needed for various purposes. This last week has been an excellent one for harvesting, and a great deal of grain has been cut. The promise is of an abundant yield of a splendid sample at a good price, and that spells good times in the West.

RAMBLER.

Indian Head, Assa., 12th September.

OUR HALIFAX LETTER.

The week has brought activity to a number of trades in Halifax. In part, this is the result of the Provincial Exhibition, but there are accounts of improved trade from other portions of the province. There seems to be a better feeling among retail merchants here and everywhere. The Exhibition, which opened last week, is really a good one. In manufactures it is especially interesting because so much of the manufactured goods exhibited are the product of the Maritime Provinces. Another excellent feature is the improvement in the number and quality of the exhibits in the cattle department. Over 650 head are shown, including many animals that would attract attention in a prize ring at any point. There are scarcely as many entries of horses as in some former years, but the two hundred animals exhibited in this department well sustain the good reputation of the Eastern provinces in the matter of horse flesh. Altogether, the exhibits from Nova Scotia fields, orchards, coast waters, mines and factories are up to the excellent standard of former Fairs, and the attendance to date has been large. Up to Saturday it was nearly ten thousand ahead of that of the first four days of 1903. Saturday was the record day of both this and last year's Exhibition, the admissions at the gate and stand aggregating 18,779. This makes the total to 10th inst., 51,435. The top figures reached in 1903 were 17,625, on the seventh day of the Fair.

In his opening address, the president, Hon. J. W. Longley, made the following reference to the holding of the Dominion Exhibition at Halifax in 1905. Said he: "A movement has been sent on foot, originated, I think, by the Canadian Manufacturers' Association, and supported subsequently by the Halifax Board of Trade and the Halifax City Council, to have the Dominion Exhibition held in the Maritime Provinces. If the Dominion Government can be induced to take such a step it seems inevitable that such an exhibition would of necessity be held in Halifax as the facilities are so vastly greater at Halifax than in any other part of the Maritime Provinces that the matter would scarcely be open to competition. No formal action has yet been taken by the Exhibition Commission, but it is not unlikely that definite steps may be taken at an early date with the object of ascertaining the views of the Dominion Government in this matter."

Truro seems to be becoming a convention town. A number of important associations have held their annual gatherings there this year, the latest of which was the Provincial Workmen's Association, which assembled in Truro last week. This is the society which engineered the recent Sydney strike, and is the main and by far the most powerful labor organization in the province. It has hitherto had the "ear" of the local Government, and been able to secure any reasonable legislation it demanded. Whether its decision to form an Independent Labor Party will lessen this influence remains to be seen. It has been decided to abolish the unwieldy Government deputations and instead a legislative committee of five has been appointed whose duty it will be to make all the representations to the Government that may be necessary during their year of office. Another change decided upon is the establishment of a weekly paper to be named the "Provincial Workman." It will be published in Glace Bay, and Mr. P. F. Lamson, a young man of some journalistic experience, will be the editor.

At its next session, the local Government will be asked to enact a new lien law for this province. One was placed on the Statute Book some years ago, but it is limited in character and of little value in such cases as that of the Canada Coal Co., which went into liquidation last winter leaving upwards of $9,000 due the workmen for wages. Some amendments will also be recommended in the matter of granting certificates to miners, making it impossible for ignorant miners to secure these certificates through misrepresentation.

On Thursday of this week, the members of the Nova Scotia Bar will present a solid silver casket to Chief Justice McDonald, who is retiring from the Bench. The casket is a handsome piece of work 18 inches long by 12 inches wide, and on the top is the figure of Justitia holding the scales. On the front is a very good profile of the recipient. An illuminated address will accompany the gift of the casket.

Capt. Ryan, son of J. W. Ryan, dry goods merchant of Kentville, has returned home from Japan. He was sent by the Dominion Government to make professional observations of the movements of the Japanese army, but, like other military attaches, was detained at Tokio, and finding it impossible to get to the front abandoned his mission. Captain Ryan served with distinction in the South African War.

Halifax, 12th September.

INSURANCE INSTITUTE OF TORONTO.

There has come to hand this week the "Proceedings of the Insurance Institute of Toronto for the Session 1903-1904," a volume of 225 pages, well printed, and containing a mass of valuable information. The first part of the publication gives the names of the officers, committees, insurance representatives, members, report of council, financial statement, syllabus, and also the proceedings of the annual banquet held last October. Then follows President Sims' address, and the following papers: One by Mr. A. J. Hughes, of the Crown Life, on "The Method of Ascertaining the Cost of a Life Insurance Agency"; one by Mr. Charles D. Cory, "Fire Insurance as an Exact Science"; one by Robert Howe, C.E., Inspector for the Canadian Fire Underwriters' Association, on "Municipal Waterworks in the City of Toronto"; one by Dr. John L. Davison, Medical Referee of the Imperial Life, on "Some Points on Tuberculosis;" one by Joseph Burn, F.I.A., of the Prudential Assurance Company of London, England, on "The Assurance of Under-average Lives"; and one by G .P. Payne, of the Canadian Fire Underwriters' Association, on "A Practical Application of the Mercantile Rating Schedule." There has also been incorporated in the proceedings the two excellent prize essays on fire and life subjects. The topic of the fire essay is "Average and Co-Insurance Clauses in Fire Insurance Policies," by Mr. E. L. McLean, secretary of the Fire Underwriters' Inspection Bureau. The life essay deals with "Main Principles to be Followed in the Selection of Lives by a Life Insurance Company," by Mr. J. B. Hall, A.I.A., of the Imperial Life Office.

The syllabus of examinations, examination papers for 1903-1904, and the names of the successful candidates at the examinations occupy some thirty pages, and will be found of much interest to the students of the Institute. The examination papers indicate that the educational committee has performed its work in a dignified and thorough manner. Apparently a high standard has been set, but not too high for any young man to master who is determined to make himself useful and efficient in whatever line of insurance he has undertaken. The "Proceedings of the Institute" should be in the hands of every insurance officer, as well as every clerk, inasmuch as there is information in it which will prove of much value to seniors as well as juniors. In addition to the attractive typographical style of the book generally, a special word of praise is deserved for the illustrations. In Mr. Cory's paper, for instance, and in that of Dr. Davison as well, the illustrations greatly help the understanding of the text.

TO CORRESPONDENTS.

B. R., Kingston.—The matter is referred to in our market reports to-day. The same thing characterizes both markets.

H. McL.—You should go fishing with him, and then you will think better of him. No man is at his best in his counting house. Try him again; perhaps his gruffness conceals a warm heart.

Bank Clerk, Winnipeg.—The date, which you do not give, would make a great difference. In 1898 the Japanese yen was worth a fraction over 99 cents; in July last it is quoted in a Washington blue book as worth 49.8 cents. Manifestly, therefore, the result of a transaction such as you mention would differ with the period.

LIFE AND ACCIDENT INSURANCE.

We note the recent appointment of Mr. John P. Daly to be general agent of the Provident Savings Life Assurance Society for the Province of Quebec. The appointment is to take effect on 1st October. Mr. Daly's headquarters will be in Montreal.

The utterance of the chairman of the Midland Employers' Assurance Company at the annual meeting recently held at Birmingham is well worthy of study. He asserted that the cost of workmen's compensation is rapidly increasing, and by no means decreasing, as has been wrongly represented in the House of Commons to be the case.

A well-known life assurance canvasser in Milwaukee, has scored another coup by writing the $350,000 policy on the life of Charles Keith, a wealthy shoe manufacturer of Brockton, Mass. The Northwestern Mutual Life, which Mr. Pick represents, retains $100,000 and the Massachusetts Mutual Life gets $50,000.

We are informed that Mr. John P. Oram, formerly one of the inspectors in Nova Scotia of the Standard Life Assurance Company of Edinburgh, has been appointed provincial manager for the National Life Assurance Company of Canada for the Province of Quebec. Mr. Oram joined forces with the general agents and office staff of the National Life a few days ago, and is already hard at work. He will find many to welcome him in his new field of labor.

The last report of the Nippon Life Assurance Company of Japan states that the annual premiums receivable in respect of the outstanding assurances at the end of 1903 amounted to yen 1,392,643,430, practically $696,000,000. The new assurances written in the year fell a little below the attainment of the previous year owing to the general depression of business occasioned by the war with Russia, augmented by the diplomatic troubles of the Manchurian Question. The premiums received during the year amounted to yen 1,337,910, bringing the total income up to the sum of yen 1,642,346, a slight increase on that of the previous year.

The Travelers Insurance Company has been giving its agents advice regarding the insuring against accidents of the persons who use or own automobiles. The company anticipates that the rapidly increasing use of these vehicles will cost the accident insurance companies many thousands of dollars, and that until their construction and management is better understood, mistakes will be made and accidents will happen. The proper use of an automobile being one of the customary diversions of outdoor life an extra rate is not expedient, and agents, therefore, must apply well-settled principles of selection, refusing to write accident insurance upon persons who expose themselves to danger by fast or reckless driving. While, says an exchange, accident insurance companies are willing to insure against the normal exposure resulting from an automobile's use by responsible men, they must exclude all cases presenting an unusual or extraordinary risk, whether from inexperience, recklessness, or unsteady nerves.

The annual banquet of the Insurance Institute of Toronto is announced to be held on the evening of Tuesday, the 11th of October, at the King Edward Hotel. The tickets have been placed at $1.25 to members of the Institute, and if the repast and speeches are to be anything like what they were last year, this sum is very modest, and, we understand, is less than the actual cost of the dinner to the Institute. It is expected that in addition to a large attendance of members several distinguished public men, as well as representative insurance officers from outside cities, will be present. The Toronto Insurance Institute has already evidenced, by the papers presented, by its publications and by its examinations, that it is filling a long-felt want in the business. Certainly it is performing excellent service to the companies engaged in all phases of insurance—life, fire and accident, as well as to the young men who are connected with the various offices and who have chosen insurance as their life work.

Many of the chief officers of our life insurance companies have been devoting their time to visiting their distant fields of operation, and in some cases in looking over new lands to conquer. Mr. J. F. Junkin, managing director of the Manufacturers' Life, is in England, likewise is Mr. L. Goldman, managing director of the North American Life, with the object of gathering information to advise their directors as to the prospects of these companies doing a successful business in Great Britain. Mr. David Burke, general manager of the Royal-Victoria Life Insurance Company, has just returned from the Maritime Provinces; Mr. Thomas Hilliard, managing director of the Dominion Life, has been absent in the far West for almost two months; Mr. George Wegenast, manager of the Mutual Life Assurance Company of Canada, is now in Western Canada, and will not return until the close of September; Mr. J. K. Macdonald, managing director of the Confederation Life Association, has not yet returned from the Old Land.

◆

—At five o'clock on Thursday afternoon, just as we are going to press, we received word by telegram of a great fire in the business quarter of Halifax. So fierce were the flames that the military were called out to assist in subduing them.

◆

—A letter from Vancouver dated 9th instant contains the following sentences descriptive of the condition and prospects of business in British Columbia and on the Pacific Coast: "On the whole, business is satisfactory in Vancouver. Building activity is noticeable in all parts of the city; wholesale and retail conditions continue good. The tourist traffic to the coast is becoming an important factor, and its increase reflects credit on the enterprise of our energetic Tourist Association. The absence of labor troubles and the Government bounty on lead are producing very prosperous times in the interior, where mining is increasingly active."

CLEARING HOUSE FIGURES.

The following are the figures of the Canadian Clearing Houses for the week ended with Thursday, 15th September, 1904, compared with those of the previous week:

	Sept. 15th.	Sept. 8th.
Montreal	$20,582,661	$17,759,281
Toronto	16,277,967	12,245,383
Winnipeg	4,886,741	4,011,353
Halifax	1,865,094	1,716,454
Hamilton	1,147,129	1,024,666
St. John	1,084,331	1,101,172
Vancouver	1,651,612	1,347,192
Victoria	726,266	508,898
Quebec	1,524,110	1,754,659
Ottawa	....	1,683,685
London	868,114	867,267
Total		$44,020,020

BANKING AND FINANCIAL.

What has been called by one of the New York dailies a banker's paradise, is the handsome premises of the Hanover National Bank. The two hundred employees of that bank have spacious quarters on the twenty-second floor, where they eat, bathe, exercise, read and rest. On the Nassau Street side is a private dining-room for the president and vice-presidents, finer than anything in our hotels. Meals for two hundred are served from twelve to two in the main dining-hall, the men eating in squads of fifty and consuming thirty minutes at the repast. The baths are as fine as those in the palace of Andrew Carnegie. The 160 book-keepers and assistants of this institution used to work in the cellar; now they are over three hundred feet above ground, with an abundance of light and ventilation. A very fast private elevator connects them with the banking office.

Following an informal suggestion made by one of the officers of the institution the clerks of the National City Bank of New York have organized a club, which will be

known as the City Bank Club. No officer may hold membership in the organization, but any one of the clerks, from the paying teller down, may join. The paying teller and nearly all the 260 clerks are members. The Bankers' Magazine explains that the object of the club is the advancement of its members along educational, social and fraternal lines. There are to be monthly meetings for social purposes and literary exercises. The dues will be $1 a year, and the officers of the bank will be honorary members. For the present, at least, the club will meet in a room set apart for its use on the second floor of the bank building.

It has been announced that Sir William Van Horne and George H. Macy are now members of the board of the International Banking Corporation of New York, taking the places therein of James H. Hyde and W. H. MacIntyre.

For twelve months ending with June, 1904, the bank clearings of Tacoma, Wash., amounted to a total of $102,301,641. The total for the corresponding months of 1902-3 was $93,348,272. The increase in two years, therefore, exceeds $40,000,000, and is at the rate of 64.6 per cent.

An American banking journal understands that negotiations have been in progress for some time in San Francisco for the organization of an international banking corporation by local capitalists and a Japanese syndicate headed by President Asano, of the Toyo Kisen Kaisha, who is described as a very wealthy man. This institution is to have a capital of $10,000,000, and is intended as the dominating influence in the financial relations between the United States and the Orient. The movement to start the extensive concern came from Japan with the proposal that $5,000,000 would be subscribed in that country if the other half of the capitalization would be provided in America.

The Superior Court at Chicago has just handed down a decision which may affect many speculative transactions in an important way. In effect, it says that operators who succeed in engineering a "corner" in corn or other commodities in which transactions are made on 'change, have no right to compel payment of the manipulated price instead of the actual value of the commodity at the time fixed for the settling of trades. The particular case was that of a number of firms and individuals against Board of Trade operators and the Bank of Montreal, in which bank was tied up nearly half a million dollars. This money represented the difference between the price for July oats, 1902, which was demanded by the manipulators of the "squeeze" and the actual market price.

The production of gold in the Rand district of South Africa fell off signally in June, the output being about the same as in March. In May the production was 314,480 ounces, valued at £1,335,826, the highest since September, 1899. The output in June was 308,219 ounces, valued at £1,309,231, a decrease of 6,261 ounces and £26,595. The output in recent years has been as follows:

	Ounces.	Value.
September, 1899	411,762	£1,657,208
May, 1901	26,904	31,271
January, 1902	70,340	293,786
January, 1903	199,279	846,489
January, 1904	288,824	1,226,846
May, 1904	314,480	1,335,826
June, 1904	308,219	1,309,231

The total number of laborers employed at the mines was 70,778 in May and 68,857 in June. The Chinese coolies have begun to arrive at the mines, and it is expected that 4,000 of them will be at work in a few weeks—Bankers' Monthly.

We hear from Brantford of a recent considerable transaction in real estate, by which the Bank of Hamilton acquires the property at the south-west corner of Market and Colborne Streets in that city, the premises at present occupied by Mr. J. Stanley, "The Big 22." The purchase price has not been announced, but it is understood to be in the neighborhood of $30,000. Mr. Stanley's lease has still about a year and a half to run, and at the end of this period the Bank of Hamilton will place a fine bank office on the corner, the site being a very desirable one. We learn on further enquiry that the bank does not intend to entirely tear down the present substantial building, but will remodel it so as to have an up-to-date office. The lot is not surpassed as a bank site in the city.

The head office of the Metropolitan Bank has been removed from Nos. 7 and 9 King Street East, Toronto, to the Canada Life building. Here it is installed in the premises lately occupied by the Bank of Nova Scotia, which have been altered and refitted for its purposes.

An example of the glaring manner in which the word "trust" is abused is conveyed in the wreckage of the North American Trust, of Boston, says the September issue of the Trust Companies magazine. It was a "get-rich-quick" scheme of the variety which robs the poor of its earnings and works on the credulity of the public. It is not necessary here to go into details as to the manner in which the promoters of this scheme obtained large amounts of money. The fact that such a company can exist in Boston, where laws have recently been passed to place the trust companies upon a more solid basis, is deplorable. Legislation should be secured in all States prohibiting the misuse of the name "trust." The trust company is an institution to guard trust funds sacredly. Anyone playing on that word should be proceeded against to the full extent of the law.

A BOARD OF TRADE FOR MOUNT BRYDGES.

Some little distance west of London, situate on the Grand Trunk Railway, in a fine farming district of Middlesex County, Ontario, is the thriving village of Mount Brydges. Stirrings have been felt among the business men of the place for some time. Finally, on the 1st September a meeting of the villagers took place in the town hall for the purpose of devising ways and means to advance the interests of the village. John Grigg, Esq., county councillor, was elected chairman, and in a few well-chosen words he set forth the object of the meeting. Speeches were made by the leading business men of the village advocating the making of a united effort to obtain concessions advantageous to the village from railways, telephone and other corporations. It was unanimously decided that the formation of a board of trade would be the best means of obtaining these several objects. Accordingly a board was formed, and the following gentlemen were elected as chief officers: President, J. K. Kidd; first vice-president, W. A. Trott; second vice-president, John Betts; secretary-treasurer, C. J. Bradley.

The several committees were struck, and the board adjourned, to meet on the evening of the first Friday in October, at the hour of 7.30 p.m.

—The University of Pennsylvania sends us a circular announcing that Mr. Joseph Wharton, the founder of the Wharton School of Finance and Commerce of that University, has recently raised its endowment to $500,000, and in consequence the University have reorganized the school and have established a series of new courses, which mark a distinct step forward in the educational policy of large universities. "A large number of specialized business courses are to be offered at the opening of the college year on September 30th, with a view to fitting young men directly for their prospective business careers. In the first two years the work includes economics, advanced physical, economic and commercial geography, money and credit, banking, advanced accounting, commercial law, industrial processes and field work in industry, together with English literature, modern languages, history and other subjects of university grade. . . . In connection with the courses in industrial processes, industrial management, transportation, banking and finance, mnay business institutions are visited and their methods are studied. A large number of business men are called on to assist in the work of instruction by means of special lectures in their respective fields."

ATHLETICS AND HOSPITALITY NATIONAL ASSETS.

The tour of the Canadian lawn bowlers to the Old Country this summer was a memorable and most enjoyable one. Not only was it a source of delight and instruction to the visitors in an athletic sense, but it was full of interest to both Canadians and Britishers, who fraternized in a way surpassing all our anticipations. The game of bowls on the green is in Great Britain of ancient origin, being probably invented during the 13th century. Our team played on the Southampton green, for instance, which dates back to 1299. There has been during the last six centuries a gradual process of evolution in the game, and during certain periods of British history it has been, as it is now, a fashionable recreation. The widespread popularity of the game of bowls is however not confined to the United Kingdom, for it is played in Australia, Canada, South Africa and other British possessions.

In Britain, I may tell your readers, the game is encouraged by the city and town corporations, public greens being laid out where any citizen may enjoy the pleasure of a game for a penny. This is a feature which I trust will commend itself to municipalities in Canada, as it certainly stimulates good healthy exercise, removes temptation, and promotes sobriety. Another good custom over there is that wives and lady friends of the members serve afternoon tea at half-time.

The greens in the Old Land are constructed with great skill; foundations are carefully laid, suitable turf brought from a great distance, and when finished an excellent dead level is reached, with a keen and true surface to play on. With such perfection in the green itself the natural result is more scientific play. Those engaged in the game become enthusiastic, acquire a fineness of touch and knowledge of distance, impossible under conditions of more uneven surfaces.

The liberal hospitality and warm reception received by the Canadians on every hand are simply indescribable. Mayors, Lord Provosts, Aldermen, Provosts, Bailies, Magistrates, Councillors with their chains, and frequently robes, of office met us with band and music or bagpipes at nearly every place we visited. Corporation officials and officers seemed to vie with each other as to who would show us most attention and honor. Drives to points of interest, luncheons, dinners, teas and other functions were showered upon us and indeed for generous, free hearted, liberal hospitality the Canadians had a grand triumphant procession. Why was this? Because we were playing a game in which masses of the people were interested and because we were Canadians, their own kinsmen, citizens of the same British Empire, colonists whom they desired to respect and esteem. We, on our part, exerted ourselves in intervals of leisure to give what information we could about our country, to answer the frequent enquiries of our hosts, and to correct misapprehensions where we found them exist. All the members of the Canadian Team were not skilful bowlers; and when it is remembered that selected players were our opponents at every match, it is not to be wondered at that we were not more successful in our games. However, I think I am within the mark in saying that our visit justified itself in other respects, and that we made a good impression. One of our team was an admirable singer, and rendered Canadian songs with skill and acceptance. This assisted our progress not a little.

The influence of such visits as that of the Scotch curlers to Canada in 1902-3, and the visit of the Canadian bowlers to Great Britain cannot be overestimated as a means of Empire-building. The people of the Mother Land and those of the various colonies should know each other better, and interchange of visits between the various colonies and the United Kingdom in manly games should be encouraged as an excellent means of increasing intimacy. Both here and "At Home," cricket, golf, curling, bowling and every manly sporting game should be supported, ever keeping in mind that a perfect man must have the spiritual, mental, physical, well-balanced.

BANKERS

MONTREAL—Molsons Bank; Imperial Bank of Canada.
NEW YORK—The Importers and Traders National Bank
LONDON ENGLAND—The National Bank of Scotland.

All classes of people who come to Canada, either collectively as an organization or as individuals, should be treated by the citizens of this great Dominion with cordiality, respect and politeness, for I am convinced that good healthy athletics and hearty hospitality are grand national assets.

Yours truly,
GEORGE ANDERSON,
Captain of the Canadian Bowling Team.

22 Earl Street, Toronto, 12th September.

EXHIBITS AT THE FAIR.

Carriages and Sleighs.

We should gladly have added, if limited space had allowed us, to the brief description in last week's issue of the exhibits in the Transportation Building at the Toronto Fair. To-day we recur to that remarkable display of vehicles partly because of a remark heard from a Montreal gentleman who had just returned from St. Louis. Speaking to the writer, he said: "There was no individual exhibit at the St. Louis Fair so large and important, so tastefully set out, as the carriage exhibit of Wm. Gray & Sons, Limited, of Chatham, at the Toronto Fair." This is high praise, and we have no reason to doubt it is deserved. There were fifty vehicles in the exhibit, some very stylish, some very comfortable, some very serviceable. Golf wagons, fruit wagons, delivery wagons, pony carts, runabouts they have, but these are commercial—all but the golf cart. The social portion of the exhibit, if we may call it such, contained a Vendome trap, with basket-work body, Frenchy-looking as its name betokened; the "Prince Edward," very English looking; the Spider phaeton; a Hyde Park trap, the very latest, with a beautiful wax girl driving it, and many other and larger vehicles, besides tilburys, runabouts and democrats. We have been told that the Chatham Grays were Liberals, and, therefore, observe with surprise a trap named "The Dundonald" among their vehicles! They must be bold people thus to place business ahead of party in Canada. But maybe they are of Scottish blood, which would help to account for it. A "Chamberlain" trap attracted attention, too, because of its name. Apparently recognizing that *noblesse oblige*, in an industrial sense, the company spared no pains to set off their extensive exhibit by the additional attractions of walls, pillars, and festoons of delicate green, bannerettes, carpetings, incandescent lights in Chinese lanterns. The result was an extremely pretty spectacle.

Automobiles.

It may have been a coincidence, or it may have been a matter of shrewd choice, that the automobile exhibit was in the same building with the models of warships at last week's Toronto Fair. There was a great rush of people to see the models, and the overflow of the crowd passed naturally by the autos. Of these there were many displays being made by the Hyslop Brothers, the Automobile and Supply Co. and the Cycle and Motor Company. The last-named had several vehicles produced at their Toronto Junction works, and very creditable they are to Canadian industry. For example, "the only electric surrey ever built in Canada," as the attendant described it. It is of dark body, striped with blue, a beautiful and inviting vehicle. An electric brougham was a substantial looking trap, and suggestive of speed was the "Ivanhoe" runabout, both which, together with an electric delivery waggon, were produced, we understand, at the company's own works. Besides these they had on exhibition a Mitchell air-cool runabout, two Ford motors, and the Stevens-Duryea, a doctor's car, very cosy and exceedingly handy. These four are made in Detroit, which is now, we are told, the greatest place in America for the manufacture of automobiles. Within the same enclosure is the same company's exhibit of bicycles. They turn out the Red Bird, the Massey-Harris, the Cleveland, the Perfect, and the Imperial, their special wheel being the "C. C. M.", a racing wheel, with Sills' patent hygienic bar. We were interested in learning, too, that the company is building gasoline cars, and that the first one turned out from the Toronto Junction factory is named the "T. A. Russell," in compliment to the worthy manager of the Canada Cycle and Motor Co.

FIRE INSURANCE NOTES.

The annual convention of the National Fraternal Congress will be held in St. Louis, September 26th and October 6th.

The fire brigade of Montreal wanted men, twenty-two in all. Last week, at the appointed time, one hundred and twenty-five applied.

The president and the secretary of the National Association of Life Underwriters, have lately been in Indianapolis looking over the arrangements for the coming annual meeting.

Despatches and press notices as collected by the Fidelity Department of the Fidelity and Casualty Co., of New York, for the month of July, 1904, indicate defalcations amounting to slightly more than a million dollars. From banks there was stolen $185,390; from building and loan associations, $33,000; from firms and corporations, $821,214, besides some $41,000 from benevolent societies, insurance companies, and municipalities.

According to the Kansas City "Star," which describes the results of a violent storm which passed over that place on Sunday afternoon, two popular superstitions regarding lightning, namely, that it never strikes twice in the same place, and that it is powerless against feathers, have been overthrown. The spire of the First Congregational Church was struck by lightning for the second time within a week, and at 1,421 Charlotte Street the electrical current tackled a feather bed and scattered the contents all over the room.

Many in fire insurance circles of Toronto who knew the man were shocked to hear of the death on Tuesday last of Mr. James Boomer, for years Canadian manager of the Manchester Assurance Company. He had been ill for only a day or two, and a consultation of physicians was called on Sunday. Internal hemorrhage set in, and he was unconscious practically until his death. Mr. Boomer was fifty-six years old. He had been on the staff of the Western Assurance Company for years, and when the Manchester opened in Canada in 1890 he was recommended as a competent man for the general management.

An insurance exchange tells us that the next meeting of the International Association of Accident Underwriters is to be held at the offices of the United States Casualty Company in New York, October 13th. It was decided at the recent convention of the association to hold a meeting during the present month at Muskoka Lake, Canada, the place of meeting of next year's convention, but it transpired that the hotel at Muskoka closes early in the month, and other arrangements become necessary.

We hear from Montreal that the underwriters have decided to raise the fire insurance rates in force in St. Cunegonde and St. Henri. No doubt this is the result, partially at least, of the destruction some little time since, of the large Catholic Church in the former municipality, which demonstrated that it was without sufficient fire fighting appliances. The same is true of St. Henri. Moreover, whenever a fire of at all a serious character breaks out at either place, it is claimed that help has to be obtained from the neighboring city. The increase will be 15 cents per hundred dollars.

Firemen in London, England, received a shock the other day. Parliament recently gave power to the London County Council to alter the title of the Metropolitan Fire Brigade to that of the London Fire Brigade. Now see what trouble this causes. In the first place, all the helmets which bear the letters "L.C.C., M.F.B." have to be altered. All the buttons on the uniforms and tunics of over 1,200 officers and men must be changed. All the steamers, and ladders, which bear the words "London County Council, Metropolitan Fire Brigade," must be re-painted. The many miles of hose which the force possesses have got to be re-stamped, and every tool of every sort. The name of the brigade painted on tablets and lamps outside the 76 different stations, scattered all over London, will have to be re-painted, and the process of change, of course, extends into the stationery, books, and printed forms used by the force.

Mercantile Summary.

Fort William, Ont., ratepayers have declared themselves in favor of exempting the property of the Empire Elevator Company from taxation.

Notwithstanding the heavy traffic through the Soo canals last month, when the net tonnage reached 4,194,886, and in July, the total traffic up to date this year has been only 14,843,007 tons, compared with 22,628,170 tons at the same time last year.

A despatch from Chicoutimi, a few days ago, announced that the R. & O. steamer, "Virginia" had run ashore near there, but we have not heard what amount of damage was done. All the passengers were taken off without difficulty.

The Montreal Gazette learns that Mr. Barber, of the Carter White Lead Company, Chicago and Omaha, has arranged to lease the large C.P.R. shops on Delorimier Ave., in that city, lately vacated, and will there establish a lead corroding industry on a large scale. The C.P.R. is to carry the ore from British Columbia, and the industry will be launched as soon as possible.

The city of Brantford is going into the telephone business. The special committee appointed by the City Council to investigate the question of a municipal telephone system decided, by a vote of 4 to 2, to report in favor of the adoption of such a system. The cost of the installation of the system is placed at $37,000. Business telephones are to cost the user $25, and residence telephones, $15 a year.

The Goldie-McCulloch Company, Limited, of Galt, are making some heavy shipments just now. For instance, eight carloads of their products have been shipped recently to the Winnipeg Street Railway Company, comprising, among other articles, one compound engine of the heavy duty type and similar to those installed at the Cataract Power Company's plant in Hamilton. The company has been quite busy of late on this type of engine, which is specially designed for modern central station practice, and seems likely to meet with considerable demand in Canada in the near future.

Late mercantile failures in Montreal are recorded as follows: Misael Jodoin, who has been doing a men's furnishing business in the East End for the past five years, but who has always been slow pay, has now assigned, on demand, owing about $3,000.——P. E. Ruel, painter, has been asked to assign, and is said to owe almost $2,000.——The affairs of the Manchester Clothing Co., of which concern Bell Caplan, wife of Nathan Backman, is the legal proprietress, are reported in insolvent shape. The liabilities, as scheduled at present, are stated at $12,000, but it is thought they will really reach nearer $20,000. Mr. Backman has been connected with various businesses in the past carried on with indifferent results, under the styles of Backman Bros., Backman & Co., Lusher & Backman, the last-named firm having failed in 1900.

AGENTS WANTED in every unrepresented District in Canada.

One of the Toronto Railway Company's large generators, which cost about $40,000, was on Friday last burned out owing to a short circuit in some of the underground wires. For a little while the whole power house was in some danger of destruction by fire. About 1,600-h.p. will be put out of action for at least six weeks. The loss is covered by insurance.

The firm of Bell & Shaver, manufacturers of gloves, mitts, robes, etc., Delhi, Ont., are about to dissolve partnership. The business, we understand, being a profitable one, Mr. Bell intends to form a new company in the near future to carry it on much more extensively than at present.

Mercantile Summary

Work on the James' Bay Railway from Sudbury to Toronto has begun near Richmond Hill, from which place it will be prosecuted in a northerly direction, and, after a little while, towards the south as well.

The sawmill plant of the Kamloops Sawmill Company, Limited, of Kamloops, B.C., was on the 9th inst. totally destroyed by fire, which injured the mill plant and machinery, and some 40,000 feet of lumber, with a loss of about $50,000; insured. About forty hands are thrown out of work.

On Saturday, the Polson Iron Works, Toronto, launched the new fisheries' protection cruiser "Vigilant" for the use of the Dominion Government on Lakes Erie and Huron. The vessel is 176 feet long, with a 22-foot beam, and the engines are twin screw, triple expansion. The contract speed is 16 knots, but this is likely to be exceeded in practice. The cost, with complete outfit and armament, is about $150,000.

The Quebec shoe manufacturer, B. Crepeau, recently reported as offering his creditors 50 cents in the dollar, cash, has apparently been unable to raise the funds, and a demand of assignment has been made upon him. He owes about $15,000.——Dion & Frere, grocers, of the city, have completed arrangements to pay 20 per cent. on liabilities of $4,600.

The weekly quota of Nova Scotia failures is as follows: An offer of 25 cents on liabilities of $4,435 is made by the proprietors of the dry goods business carried on at Sydney, under the style of the Sydney Cash and Credit Co. The assets are figured at $1,240, including $3,000 of book accounts, valued at $300. The managers must have been living out of capital. ——J. F. Robinson, doing a small dry goods business at Windsor, has assigned. His trade debts are about $1,300, with preferred liabilities for rent, etc., amounting to say $600 more.——Mrs. Sophia L. Gentles, doing a grocery business in Dartmouth, is reported in difficulties. She has been continuing the business of T. Gentles & Sons, who failed in December, 1902.

The Geographical Congress, at Washington, was entertained, *inter alia*, by the reading of cablegrams received from all parts of the world in reply to the international messages of greeting sent out to Lisbon, Portugal; Madras, India, etc. The replies came in French, Spanish, and other modern languages. From the city of Mexico a despatch stated that the signal was received 36-100 of a second slow. At Toronto the signal was 23-100 of a second slow, while at the Mare Island Navy Yard it arrived at 32-100 of a second early according to the coast chronometers. The signal was sent on its journey in two directions one via the Pacific cable, and the other via the Atlantic. A cablegram from Adelaide, Australia, contained the interesting information that the two signals had met there exactly fourteen seconds after being sent from Washington.

Sale of Automobile Manufacturing Business.

The machinery, general equipment and stock-in-trade of the Marble-Swift Automobile Company of Canada, Woodstock, Ontario, is offered for sale by private tender. The Plant is in excellent condition, being compact and modern. The machinery is high class, in first class order, and the mechanical arrangement is designed to give the maximum of manufacturing efficiency and economy. The stock-in-trade is very complete and is in such shape that with a very small outlay for wages, a number of machines may rapidly be assembled and completed for the market. The plant is most advantageously situated. The manufacturing and shipping facilities of Woodstock are of the highest order. **This is an excellent and unusual opportunity to acquire a compact and profitable business on reasonable terms.** The property may be inspected by arrangement with, and inventories may be seen at the offices of, the undersigned and W. T. McMullen, Esq., Solicitor, Woodstock, Tenders will be received by the undersigned up till and including the first day of October, 1904. The highest or any offer will not necessarily be accepted.

Mercantile Summary.

A new steel bridge has just been completed at Buctouche, N.B.

The Hotel Manitou, at Manitowaning, Ont., has been burned down with a loss of $12,000, and insurance of $6,000.

A general dealer, at Hawkesbury Ont., named Max Greenspoon, has assigned with liabilities of about $10,000, and apparent assets of only $8,000. He had formerly done business in Montreal, and also at Vankleek Hill.

It seems to be a fact that the Canadian Pacific Railway has closed a contract with the Consolidated Lake Superior Company for 40,000 tons of steel rails, the first shipment of 10,000 tons to be made in February next.

Recent heavy rains in New Brunswick have swollen the rivers to such an extent that mill owners and lumbermen were taken by surprise and a large number of logs were sent adrift. Booms in some places are reported entirely cleared out.

—We hear from Montreal that the long established business of E. N. Heney & Co. has been put into a joint stock company, under the name of The E. N. Heney Company, Limited, of which Mr. C. R. Hosmer is president; W. F. Heney, vice-president and general manager; H. S. Holt, F. W. Thompson and Frank Paul, directors.

Mr. T. B. Speight has returned from a trip of exploration of the country northwest of Lake Abittibi. He reports the soil to be at least 75 per cent. clay land covered with good, and, in some cases, large-sized poplars and other trees. Spruce also was plentiful. On the whole he is disposed to believe that the region will be found to contain large areas of good farming land.

The coal mining company at Frank, Alta., which lost so much of its plant and machinery in the great landslide a year or two ago, is now building a large brick power house, so as to begin operations on another shaft. The company has a pay roll, even now, of over $25,000 a month, and is producing some fine coal for steam purposes.

M. P. Herault, the French inventor of the electrical smelting process for iron and steel, and Mr. Louis Simpson, formerly manager of the Valleyfield Cotton Mills, are reported to be interested in a scheme for utilizing the Chats Rapids water-power below Arnprior for the development of a large iron and steel industry, employing the electrical process. It is shown that valuable iron deposits exist on the shore of Chats Lake.

—Mr. S. H. C. Miner, president of the Granby Mining and Smelting Company, is stated to have sold out his controlling share in that concern to Mr. J. J. Hill, and other Great Northern Railway interests. The company's entire business, which has totalled some $50,000 per month, has in the past been handled by the C.P.R., but the Great Northern Railway, which has a branch line to the works, will, of course, now take it over.

In August, last year, Ignace Marquis began a small general business at Sayabec, Que. He has not been giving his affairs the best of attention, so that his assignment chronicled at this early date does not create much surprise.——John Ballantine, a storekeeper on Grindstone Island, one of the Magdalens, is reported insolvent, and E. Stewart, of Amherst, N.S., has been appointed provisional guardian——A demand of assignment has been made upon Charron & Roy, who have been handling groceries, clothing, etc., at Brompton Falls, Que., and they are stated to owe about $4,000. The partnership has been in existence about two years, and Roy has also been carrying on a business alone at Windsor Mills.

Mercantile Summary.

The Ontario Lantern Company's factory, at Hamilton, was on Tuesday last injured by fire to the extent of about $4,000.

J. G. Wyatt, formerly a sort of foreman in the Hull paper mills, and who started in the tobacco line in Ottawa last March, has already assigned.

We hear that Hamilton hotelkeepers are being asked to take stock in a proposed project, emanating from United States capitalists, to establish in that city a large malt house and brewery.

The steamer "Princess" has reached Selkirk from the north with a very valuable cargo, having over $250,000 worth of furs for the Hudson's Bay Company. So says a special despatch of last Friday from Winnipeg.

W. Ogilvie's large dredge, which last year was used in Stewart's River, Yukon Territory, is now being overhauled for operations on the Klondyke river, near the junction of that river with the Yukon river. The work of the dredge is looked forward to with great interest, it having been often asserted that there is no gold in the Klondyke river.

Alex. Bremner, tanner and manufacturer of fur robes, coats, mitts, etc., at Tillsonburg, Ont., reports business in his line very large this summer, but finds himself handicapped in filling orders, because of the scarcity of labor. He says it is next to impossible to induce workmen to leave cities to go to small towns to work, because of the lack of amusements and excitement to which they have become accustomed.

The properties of the Sissiboo Pulp and Paper Company, near Weymouth, N.S., comprising about 25,000 acres of timber land covered with spruce, pine, hemlock, and hardwood; two pulp mills equipped with eleven grinders, compressors, wet machines, etc.; a large dam, constructed of solid masonry; a long wharf, at Weymouth Bridge, with a warehouse, shed, offices, stores, smithy, dwelling house, village lots, etc., were on the 12th inst. sold under a foreclosure sale, in Digby, to Mr. A. G. Ross, manager of the National Trust Company.

◆

UNITED STATES FINANCES.

Henry Clews & Co., New York, in their weekly circular of September 10th, say: No great keenness of perception is required to observe that a decided improvement in confidence has taken place during the past two or three months. This has been due, of course, partly to a natural reaction from the extreme depression which ushered in the current year, but mainly to an actual betterment of conditions, chief of which is the passing of any serious uncertainty regarding the crops. It need cause no disappointment that thus far the more hopeful spirit recently developed has not yet crystallized into an enlarged volume of business. A change of feeling must always precede any change of action; and there is every reason to believe that in due time trade and industry will experience a reasonable revival. Of all factors in the situation much the most important

PICKFORD & BLACK,
HALIFAX.

Is It Sufficient?

Very few people realize how much life insurance is necessary to take the place of the income they are at present earning. Take a man who is earning $1,500 a year. Let us suppose that $500 goes for personal expenses and $1,000 for the keeping of his wife and family. $1,000 is the interest at 5% on $20,000. It is safe to say that no man earning $1,500 a year carries $20,000 of life insurance. Every man should, however, strive to leave his family in as good a position after his death as they are before.

Rainy River, Aug. 18, 1904.

Sale of Debentures.

Tenders wanted for the purchase of $42,000 Debentures at 4% of the Brandon School District No. 129, as per by-law passed by the ratepayers of said city, and approved by the Department of Education. Same repayable in twenty years.

All tenders to be in the hands of the undersigned on or before 1st October, 1904.

Wm. WALKER,
Secretary-Treasurer.
Box 549, Brandon, Man.

is that we are now gathering an abundant and profitable harvest; not quite so abundant as at one time expected, yet sufficiently so to ensure our agriculturists another prosperous year. It makes one shrink to think what might have happened had this been a year of crop failures, succeeding the series of disasters which began in 1902 and continued through 1903. The good harvests of the current year have not only saved the country from a fresh outbreak of liquidation, but have really gone a long way towards restoring the country's finances and industries to a position of normal soundness and stability. Another year of profitable agriculture should afford time and means for better taking care of the mass of indigestible securities created during the last six or seven years. The most important hindrances to further recovery are the war, the labor situation, the high level of commodity prices and the less favorable tendency of our foreign trade.

As for high commodity prices, the tendency is downwards, except when speculative operations interfere, as in the case of cotton and wheat. But here, too, the drift in the long run is away from the excessively high prices which have prevailed.

Speculation lagged somewhat during the week, partly owing to the holidays, but there is an undertone of confidence which gains perceptibly each week. This is shown by the steady absorption of bonds and better class investments. The improvement in top-grade securities will inevitably extend to those lower down in the list, and better grade railroad shares seem destined for still higher prices.

The Toronto and Niagara Power Co. expect to award contracts for the building of a power house and sub-station at Niagara at a cost of $300,000, and $100,000, respectively, within the next month.

TORONTO MARKETS.

Toronto, Sept. 15th, 1904.

Chemicals, Drugs, Etc.—Trade is in an average state of activity, and prices are steady. No appreciable changes have been made during the week. A fair volume of business has been done in the chief staple drugs. In the New York market an upward tendency is discernible in several of the cruder commodities. Quinine is firmer, but trading is not large, the manufacturers discouraging anything which looks like a speculative demand. An advance is looked for as a possible result of the bark sales in London. Quiet prevails in the opium trade, but prices are distinctly firm, but the demand is confined to jobbers' quantities.

Dry Goods.—The feature in the woolen branch has been an advance of 7½ to 10 per cent. in domestic knitted goods. The market for this line is very strong, and it is difficult to obtain a definite promise as to deliveries. It may be said that all kinds of woolen goods are in brisk demand. Uncertainty still prevails as to the course of cotton goods, and buyers are holding aloof. This week there has been

a slight lull in the business done in wholesale quarters, but this was to have been expected after the extra rush of the last week or two. Retailers in the country, and travellers report the prospects quite good for a satisfactory season's trade. Payments early this month, however, were by no means so good as had been anticipated. Perhaps the rush of work connected with harvesting in some sections, and the still existing uncertainty in regard to the size and quality of the crop, in others is responsible for this. Whatever be the cause, the trade seems largely to preserve its optimism.

Flour and Grain.—The flour market has become even stronger during the past week, in sympathy, of course, with wheat. Ninety per cent. patents have sold at $4.45, in buyers' bags, while the price at which they are more usually held is $4.65. Manitoba flour has been advanced 30c. No change has been made in oatmeal, which keeps at $4.75 per barrel. Millfeed keeps firm. Wheat is again 2 to 3c. higher, and very firm at the advance. Barley is not changed. Oats are a cent lower. Rye has gone up a cent. Buckwheat and corn remain as before quoted. There is not much grain offering, but a good demand is coming from the millers.

Fruits and Vegetables.—The large quantities of fruit on the market, which have characterized the last two or three weeks, have continued, but, under an active demand, prices have kept up well. Pears have been firm under comparatively light offerings. Tomatoes have been plentiful, and lower prices have prevailed. Pineapples are almost out of the market now.

Groceries.—A good volume of trade is the general report, without any feature of strong interest. Sugar is firm at the recent advances, and the movement is still fairly large. In nuts, filberts from Sicily are now quoted at 11 to 12c., the crop having proved poor. No changes have occurred recently in canned goods, but the situation is strong, especially in tomatoes and corn.

Hides and Skins.—A fair supply of hides is coming forward, but the demand is sufficient to take care of them. Lambskins are steady at good prices. The position of tallow has improved.

Live Stock.—There has been a good demand for choice export cattle, but such have not been numerous in the market. Butchers' cattle have been a trifle firmer under lighter offerings. There is still a good deal of complaint as to the quality of those coming forward. Plenty of stockers and feeders have come forward, for which the demand has been fairly good. Slowness prevails in the demand for lambs, due to the rather large quantities that have been coming in of late. For calves the tone is steady. Hogs are easier.

Provisions.—The receipts of butter are fair, but they are composed largely of medium-quality grades. Fresh made butter is in good demand. Creamery prints sell at 21c.. Cheese is a little on the quiet side. Hog products are in good demand. Lard is a little firmer at the old quotations.

MONTREAL MARKETS.

Montreal, Sept. 14th, 1904.

Ashes.—More enquiry is noted from Europe, and available supplies here are very limited. One dealer reports an order for 50 barrels from Paris, which cannot at the moment be filled, and prices are again advancing. First pots would realize from $5.80 to $5.85; seconds, $5.30 to $5.35. Pearls would readily bring $8 per cental.

Cements and Firebricks.—A fair aggregate of moderate sized orders is going on, but there have been comparatively few large sales reported this season. We quote: Belgian, $1.70 to $2.10, as to grade; English, $2 to $2.10; a little business is still done in German, despite the surtax, at $2.35. Firebricks are quoted at $18 to $22 per thousand.

Dairy Products.—Exports last week in these lines showed quite a notable falling off, as compared with the week preceding, as well as with the corresponding week a year ago. The shipments of cheese only reached 64,561 boxes, over 40,000 less than for the same week of 1903. Of butter, 21,580 packages were exported. Values in butter incline to firmness, and from 19 to 19¼c. per lb. is quoted for finest creameries, some business being reported at a shade over the outside figure. Trading in cheese has been reported fairly active of late, and values are steady at 9¼ to 9⅜c. for finest Ontarios; Townships, 9 to 9⅛c., and fine Quebecs, 8⅝ to 8⅞c. per pound.

Dry Goods.—City retailers are now a little busier, and orders from this quarter are coming in better. Travellers, who are on their rounds in the country districts also report business somewhat improved during the past week, but there is no disposition among retailers to buy freely nor to anticipate wants to any great extent. General remittances are reported as fair. Values of textiles are steady and unchanged.

Flour.—Owing to the great strength displayed in the wheat market, both of the large local milling companies put up prices of flour yesterday from 25 to 30c. a barrel, making finest patents now $5.80 per barrel.

Furs.—Little of special interest has developed in raw furs as yet. The date for the October London sales has not been announced, but they will begin about the 20th prox. There seems to be an expectation that some further decline in prices may develop, and quotations for new-caught pelts will not be fixed until after the results of said sales be known.

Groceries.—The strength recently noted in the sugar market is fully sustained. The reported shortage in the European beet crop is confirmed, and there are some who profess to believe that granulated will eventually reach the $5 mark, though this is generally considered an extreme view of the situation. As the market stands, granulated is quoted at $4.65 at the factory, with soft goods ranging upwards from $4.05, but a further advance is deemed not improbable at any moment. The dullness in teas is particularly pronounced, importers and brokers complaining that little business can be done with jobbers. Some limited supplies of new Valencia raisins are due here, via Liverpool, next week, and 6½c. is quoted as about the price for fine off-stalk, a figure which will be subject to revision when main stocks by direct vessel reach here. The "Escalona" should be leaving Denia about now, and the "Jacona," the second direct boat, is now at Patras taking on cargo, and will make the round of Mediterranean ports. The decline in currants is reported as checked, and fine Filiatras are quoted at 13s. 6d. Smyrna market for figs and sultanas is reported steady. The comparatively low figures for California raisins will affect the consumption of Valencias, and we hear of some very fair orders being booked for California fruit, both whole and seeded. Shelled almonds are easier; filberts continue high. White beans are high and scarce, as high as $1.40 being quoted for good grades.

Hides.—No change of any kind is reported in this line. A fairly steady trade is reported in hides, dealers buying No. 1 at 9c. per lb., and quoting 9½c. to tanners. Calfskins are 70c. each.

Leather.—A slightly better demand is reported from jobbers and boot and shoe manufacturers, and foreign demand for sole is reported particularly good. Prices remain steady at figures quoted last week.

Metals and Hardware.—Some little improvement in the demand for heavy metals is apparent, and the movement in general hardware is also rather brisker. A fair business is reported in pig iron, at $19 for No. 1 Summerlee; $18 for No. 2, and $17.50 for No. 1 English; domestic brands rule at about $18.50 to $19. A cargo of about 2,000 tons of Middlesboro iron is due here next week. Domestic bars are steady at $1.70 to $1.75. Spelter inclines to firmness at $5.75; ingot tin, 31 to 32c.; copper, 13½c.; lead, $3.20 to $3.25. The sheet plate market shows little change. Canada plates are quoted at $2.25 for fifty-two's; black sheets, $2.20; Ternes, $6.25 to $6.35; galvanized sheets, $4.25 for standard brands; boiler plate, $2.

Oils, Paints and Glass.—The movement in these lines of merchandise is still of a moderate and quiet character. Window glass is still being sold at low figures, $2.80 being quoted per 100 ft. for common grades. Turpentine is steady at

BANKS and BABIES

No BABIES, No BANKS

In order that we may perpetuate our business in the manufacture of BANK FITTINGS we have introduced a new line for the proper care of the future patrons of our banks.

The Collapsible Little Beauty Hammock Cot Is the Ideal Infant's Bed.

SWEET CAPORAL

CIGARETTES

STANDARD OF THE WORLD

SOLD BY ALL

LEADING WHOLESALE HOUSES.

82½c. per gallon, in single barrels; linseed oil, 43 to 44c. for raw, and the usual advance for boiled. In other goods no changes are reported.

EXPORTING CANADIAN CANNED GOODS.

Mr. P. B. Ball, Canadian commercial agent, in Birmingham, England, again comments on the fine opportunity afforded Canadian canners of fruits and vegetables. But he seizes the occasion to dwell again upon the absolute necessity for good care in packing and putting them up, and this, we are sorry to note, is not always given. As an instance in point Mr. Ball writes: "Ever since I have been in Great Britain, for my household use, through a house in London, I have purchased Canadian goods exclusively. A short time ago this firm wrote saying they had a particularly fine brand of goods sent to them. I ordered a small quantity of the different varieties, strawberries, raspberries, plums, etc., and on opening found they were absolutely useless so far as general sale was concerned. The flavor was not bad, but the fruit was pulpy and the juice cloudy and thick. If Canadian canners intend to ship goods to the British market they will have to exercise a great deal more care than has been shown by this firm. It is not difficult to see how harmful to Canadian trade is a shipment of this nature. Canadians of course know the difference in quality of the product of the various canneries, but the people of Great Britain do not know it, and it would be most unfortunate if the carelessness of a particular firm involved the interests of canneries anxious to establish a reputation in Great Britain." Could not some form of inspection be established to investigate the quality of all canned goods exported from this country?

SOME ENGLISH DRY GOODS NOTES.

We take the following items from The Drapers' Record of London, 3rd September:

The feminine world of trade is an important one, to which all must wish the utmost good fortune—except as regards the ladies who are mere trading figureheads, designed to conceal the transactions of insolvent, and, perhaps, fraudulent husbands. Particulars of the failures of women show that the total number in 1903 was 465, an increase of 22 on that of 1902. The number of failures among married women is generally about equal ot that of widows, but last year the married women showed an excess of 34, while the number of spinsters is, as usual, about half the number of widows. Only 31, or less than 7 per cent. of the total number had no trade or occupation. The trades in which the largest number of female failures occurred were: Grocers, 64; drapers and haberdashers, 54; milliners and dressmakers, 47; and lodging-house keepers, 36.

Our Nottingham contemporary gives two instances of the way in which the Nottingham lace trade has been injured by the cast-iron methods of the trades union. At one time there was a run on a certain kind of black lace, and the men who made it were paid a special rate, because the work was trying to the eyes, and they could not turn out the material at such a fast rate. Then the demand slackened, and one manufacturer, who had some white lace to make that he knew would have to be dyed black, wished to run a few of the black threads that had been left in his hands into the material. But the men refused to carry out the work unless they were given the higher rate! That is one instance; here is another: The curtain trade, once regarded as a kind of Nottingham preserve, has gone to Scotland, because when they first started this kind of work over the border, in an experimental way, the Nottingham operatives refused to work at a rate which, though quite a fair one, would have enabled the manufacturer there to compete with the Scotch makers. Under such circumstances, it is not surprising to find a manufacturer sadly remarking: "No, I am afraid there is no remedy that will bring about a revival of the Nottingham lace-making trade—it is too late in the day."

"Glen Mawr"

RESIDENTIAL AND DAY SCHOOL FOR GIRLS

651 SPADINA AVENUE, TORONTO

Thorough English Course. Individual Attention. Pupils prepared for the Universities and for Examinations in Music and Art. Large staff of Resident and Visiting Teachers.

MISS VEALS,
Lady Principal.

The strike of the meat-packers, at Chicago has been declared "off" by the president of the Amalgamated Meat Cutters and Butcher Workmen of America, and it is now in order for the victims to figure out exactly what they have gained by leaving their work at all.

The Minister of Marine and Fisheries has authorized an extension of lobster fishing in the Magdalen Islands for thirty days, ending on October 8th. This action is taken in view of the small pack made at the Magdalen Islands this summer. The herring catch off the coast of Nova Scotia has been very small this season.

Eastern firms should subscribe for THE COMMERCIAL and keep posted on Western trade

THE ART OF SELLING.

The high schools in Boston, Mass., now include in their curriculum a course of scientific salesmanship. Among the topics taught are: How to seek a position. How to hold a position. The elements of making a sale. The history and character of different fabrics. The importance of personality, physique, health, etc. Each of these subjects is subdivided into various branches. For example, under the heading, "The elements of making a sale," we have:

1. Customer's attention secured by—
   a. Personal appearance.
   b. Manner of approach.
   c. Power of speech.
2. Customer's interest aroused by—
   a. Appeal to the emotions.
   b. Appeal to the reason.
3. Customer induced to buy by—
   a. Enthusiasm shown in pointing out good qualities of goods.
   b. Concentrated interest and attention of salesperson.
   c. Sympathetic attitude of salesperson.

At the beginning of the course the classes listen to lectures and talks from practical salesmen. They are expected to take notes and later are examined as to their understanding of the lectures and talks they have heard. When the classes are more advanced there are demonstrations of salesmanship. Some member of the class is called upon to make an imaginary sale to some other member of the class. The class watches these demonstrations, making notes preparatory to the general discussion which follows. In these discussions the members of the class are called upon to criticise or suggest improvements as to the manner in which the sale was conducted.

◆

A new low record has been reached for the area under wheat in Great Britain Official returns show that in June last the acreage under that grain was 1,375,284 acres, whereas last year it was 1,581,587 acres.

There are two good stories now current, which are worth repeating in these columns. The first relates to Her Majesty the Queen. Her Majesty struck up acquaintance with a little child, and among other questions, asked her where she lived. "I live near Whiteley's," was the reply, followed by the unexpected rejoinder: "And where do you live?" With admirable tact the Queen immediately answered: "Oh, I live near Gorringe's."

The New York and Canadian Railway, which is a branch of the Delaware and Hudson Company, at a meeting in Albany, last week, decided to increase their capital stock from $4,000,000 to $9,000,000. The new stock is to be turned into the treasury of the Delaware and Hudson Company in payment for the New York and Canada bonds, which the former paid off a few months ago. The new issue will be of $5,000,000, in five per cent., non-cumulative, preferred stock.

MR. DRUMMOND'S SPEECH.

Mr. Geo. E. Drummond, in his speech before the convention of manufacturers in Montreal, touched a responsive chord, not only in the minds of his immediate hearers, but in those of the vaster body of Canadians who always follow his remarks with interest, if not always with absolute agreement. He spoke of the wonderful progress of Canada, and of the high importance to which manufacturing has attained in her list of reproductive assets. No one will be inclined to belittle the great basic industries of Canada, agricultural, mineral, the forest and fisheries, but it will startle many to learn that the aggregate value of these products is now only some $30,000,000 in excess of the value of manufactured goods turned out in Canadian factories.

How to preserve, how to increase the power of, this great lever for the production of wealth was the chief theme of Mr. Drummond's discourse. We are naturally a nation of producers, our first thought must naturally be the profitable marketing of our products, and the one great market which we can safely take and control is here at home. The speaker drew his audience with him when he said:—

"To establish native industries that will create and maintain a prosperous people and that will thus provide a home market, should be the object and aim of our statesmen and of our farmers and manufacturers alike. Any legislative measure that will keep our capital and labor continuously and profitably employed, will command the hearty support of all intelligent Canadians, whether they be agriculturalists or manufacturers, producers or consumers."

And when he went on to speak of the manner in which this was to be done, by a revision and general heightening of the Canadian tariff, modified by favorable consideration of the preferential claims of the Mother Country, and of other colonies, there can be no doubt that the eloquence of the speaker carried the majority of his hearers completely with him. There is another side to the pleasing picture presented by the high protectionists, and there are economic arguments which generally make themselves remembered in the long run. But, for the time at least, these were forgotten—the statements were so marvellously well handled, the speaker so evidently convinced of the justice of his cause, that anything but an enthusiastic reception of the ideas presented was tacitly put out of court.

STOCK MARKET CONDITIONS.

For many months following upon the collapse of the wave of stock speculation a couple of years ago, the market might with truth have been described as dead. The inflation had been out of all bounds; the reaction was similarly sharp, and it was long continued, for only during the last few weeks can there be said to have been any real revival. Even now, so far as the general public is concerned, it may almost be said that stock speculation is an unknown thing in our midst. To a certain degree this need not be looked upon as an unmitigated evil, for there can be no doubt that at such times as the period of activity above referred to, the stock market is an arena which attracts to it a very large number of well-meaning people whose true place should be a long distance away therefrom, and whose fortuitous workings of the market—and subsequent miseries—bring the whole business into an undeserved disrepute. At the same time, while the volume of transactions has been comparatively small ever since the pricking of the bubble, values have been keeping firm to a very satisfactory degree and, indeed, for some time past, they have been gently but steadily creeping upward.

During the past few months, too, one factor has been at work which, without attracting any great notice outside those immediately concerned, has done much to strengthen the general situation. The attention of the true investor, as contra distinguished from the speculator, has been drawn to the extremely reasonable prices of some of the securities offered on the Montreal and Toronto stock markets, and he has put his money in them "for keeps." A larger proportion than usual, therefore, of the shares listed on our 'Changes, is probably held in strong hands, and this—to make use of an expression much favored a year or two ago—does much to clear the atmosphere.

Another feature which helps the situation is the fact that very similar conditions prevail in the United States—and we cannot claim to have "no connection with the firm across the road," so far as the American stock centres are concerned. We are influenced by the changes in New York, and influenced strongly. But the same slowly upward movement is visible there; strong hands hold a large proportion of the popular stocks, and in many cases, through undisguised manipulation; the general business position of the country has improved; and, on the whole, the indications point to a steady rehabilitation of confidence both there and here.

THE CROP.

Our Winnipeg correspondent wired us at noon yesterday to the following effect: Harvesting and threshing have been considerably delayed during the past week by general wet weather throughout the West. The rains have not been heavy, however, having been chiefly in the form of light showers, and no lodging of grain is reported. Cutting is practically finished, and with favorable weather threshing will be general. Latest districts report some damage from heavy frost. Altogether reports are satisfactory for although the crop has been badly damaged in some parts, the good yield of the greater part of the country will bring up the average.

A MORAL FROM RECENT FIRES.

We have been asked as to what moral could be drawn from the two recent disastrous fires in Halifax, and, though explanations are proverbially but unsatisfactory things at the best, we will proceed to make a few comments as they occur to us. In the first place, fortunately for Halifax, it is not so easy to draw a convincing moral as it is in some other cities which have suffered from disastrous conflagrations. Of course it is a somewhat striking coincidence that two severe and such similar fires should visit the one place at practically the same time, especially when it is remembered that this particular city has been more or less free from bad conflagrations for so many years. But Halifax—comparatively speaking, of course, for much yet remains to be done before perfection can be reached—is a place where the citizens have been sensible enough to take time by the forelock, and to save themselves much anxiety and much loss by putting in a reasonably good fire-fighting equipment; moreover, it is situate within easy distance of other places where good fire-fighting appliances could be called upon if necessary. It is true that in the fires referred to, the lack of fire-tugs made itself severely felt, and that this is a lack which was pointed out to them long ago, but this is an oversight which we believe is soon to be remedied by the Haligonians, usually quick to remedy a recognized defect, even if they be as conservative as they are reputed. Again, there is a very large proportion of wooden buildings in Halifax, and this is an element of danger, especially in a gale such as that which raged on Thursday night. It may be confessed, however, that we have not yet found a moral, so far as this particular city is concerned; probably, indeed, the only really strong one would be that, even when everything possible is done in the matter of protection and equipment, there still remains an absolute necessity for fire insurance.

And for this to be, and to continue, of the strongest and most unimpeachable character in the matter of true protection, it is necessary that the rates should be based upon precise and scientific standards. First get your data, then arrange the cost of premiums accordingly. That this has not been fully carried out in the past was shown by Mr. Chas. D. Cory, in a paper which he read before the Insurance Institute of Toronto some months ago. In this address, with the aid of a very ingenious chart, he showed that the business of fire insurance in Canada, taking a period from 1869 to 1902, has been run at a loss, taking the general average, one year with another, of something like $150,000 each year. What is needed then, is that competent actuaries should draw up a schedule of rates high enough to recoup the companies for their losses, and large enough to allow not only for the losses which maintain a steady drain upon their resources in average years, but for the big "conflagration" which, coming though it may be rarely, yet eats up not only all the narrow margin of profits which have been left by the normal annual fire waste, but requires a reorganization of capital to meet it. In addition, each hazard should pay a premium according to its merits or its demerits. The province or locality which burns up more than its fair share of premiums should be taxed accordingly, not be helped out by its less careless neighbor. And in particular cities, congested or dangerous sections should be made to pay for the peril they cause, not have their burden lightened by being averaged with risks which pay more than their fair share of clear profit. The general moral, then, is for the insurance companies to keep their rates sufficiently high to protect themselves against loss, and to give fair interest on their investment.

FOOD SUPPLY TO BRITAIN.

The question of an adequate food supply for the United Kingdom in time of war is one which has attracted attention for a long time. It has been the theme of British writers and speakers, who have contended with much force that the greatest menace to the Old Country lay in the circumstance that enemies' fleets might in case of war interfere with the supply of foodstuffs from abroad necessary to support the population of the British Islands. At the present moment a Royal Commission is sitting in England to enquire into food supply in time of war, which was appointed by Government at the request of an association formed to look into the food supply question. This association embraces many prominent names, and its officers consist of the Duke of Sutherland, Lord Strathcona, Alfred Emmott, M.P., Lord Aldenham, Mr. Henry McNiel, M. J. E. Gregory, and Capt. Stewart L. Murray.

In connection with this matter, a proposal, or rather series of proposals, is made by Mr. Marshall Stevens, first manager of the Manchester Ship Canal. He desires to increase the quantity of wheat held in the United Kingdom, and to that end would erect warehouses for its storage. "I am of opinion," he says, "that if storage rent free were provided in this country close to the point of consumption, and consequently in the best position for making sales, that a large quantity of the grain now held for sale in other countries would be attracted here a considerable time before it is required for consumption." And thereupon he proposes to offer free storage. One point where he would store at least 4,000,000 bushels is Manchester. His scheme is thus described by himself, as submitted for their approval to grain dealers in Chicago, Boston, and Montreal, respectively:

> I am proposing to the Royal Commission that my company should erect [at Trafford Park, on the Manchester Ship Canal] a fireproof grain storage of reinforced concrete on a large scale, the first installation to have a storage capacity for 500,000 quarters of wheat.
>
> The Government to arrange with us to cover the rent charges by way of interest upon the capital expended, we taking our risk in respect of the capital of and expenses in connection with the operating plant.
>
> The proposition is to offer firms like yourselves *rent free* storage of grain, however long your consignments may remain in stock, and in connection therewith to issue warrants for grain received and graded which would be negotiable by the English banks.
>
> The operating costs (which would be limited to those ordinarily paid over here) would be receivable from the purchasers of your grain, so that they would not be in a worse position than they are now when they purchase parcels to arrive.
>
> The advantages which would accrue to yourselves would be that you would be able to take advantage of cheap freights and other economic conditions, and thus send forward your grain to England with the knowledge that you could not be caught with charges as you would almost certainly be if you now sent on to consignment.

Two of the grain dealing firms in America replied favoring the proposal and opining that the scheme would accomplish its object, but the Montreal firm demurred. Mr. Stevens has essayed to make out for the satisfaction of the Royal Commission a *prima facie* case in respect to each of the following three points:

> 1. That the demand for grain in this country [Britain] is so constant that merchants would ship upon consignment here if relieved of any additional expense by doing so.
>
> 2. That merchants and their customers would gain advantages by holding stocks in this country instead of elsewhere.
>
> 3. That no additional charges would be incurred either by the merchant or the miller than those now incurred when deliveries are effected direct ex-ship to miller.

He submits arguments and statistics designed to make these points. In the course of his lengthy paper he states that "the approximate requirement by the population of the United Kingdom of imported wheat for two months is 32,000,000 bushels." This means 192,000,000 bushels a year. Further, that the yearly imports equal the whole yearly export of the United States, are four times as much as the shipments of Argentina, and ten times as much as the total shipments of Canada. Further arguments for which we have not room are addressed to merchants and millers. As to the probable exporters of grain in Canada, in case his scheme takes actual form and the stores are built:

> It would be explained to producers in Canada and Argentina that if they like to hold their grain it can be taken for them from their local railway depot, brought over by rail and steamer to the elevator without their outlaying one penny, and a negotiable warrant given to them upon which they can obtain advances.

As already stated by the promoter, the British Government is to bear the expense of storage in these warehouses, whose proprietors make their profit, if any, out of handling the grain inward and outward. In order the better to understand what can be done with respect to Canadian wheat in such a scheme, Mr. Stevens is now in our Northwest, but expects to be able to report more definitely to the Royal Commission early in October. His views in the matter of increasing the storage food supply of the United Kingdom are bold, and the scheme he propounds, in some respects, plausible. If the principle be adopted, warehouses by the score could be erected at other points than Manchester, which has been first chosen, we are told, because it is the centre of the most densely populated part of the United Kingdom, eight millions of industrial workers. One portion of Mr. Stevens' figures has struck us forcibly. It is the statement of Mr. George Johnson, statistician for the Dominion, that in 1903 the quantity of Canadian wheat exported to all countries was 38,760,000 bushels. Of this there was exported direct from Canada to the United Kingdom 17,688,000 bushels, and exported in bond through United States ports 15,776,000 bushels. It is probably new to most people that so large a part of Canada's export wheat goes abroad through United States channels.

THE LUMBER TRADE.

Very little change has taken place in the situation of the lumber market, so far as Ontario and Quebec are concerned, since last report. Prices continue steady, though this is a feature which has not become more noticeable during the past few weeks, the settlement in the building trades perhaps having been discounted already. In New Brunswick there are some features in the market which are worth mentioning. Operators do not appear anxious to hire crews of men, as usual at this time of the year. Prices are low, and there is apparently not sufficient inducement to cut heavily this year, and incur the high cost of provisions, etc. Both on the St. John and Miramichi rivers it looks as if the production this year will be considerably lighter than average last year. The cut on the St. John River was nearly 150,000,000 feet, but this season it is estimated at something like half this amount.

In the North West, the much talked of lumber combine is reported to have fallen to the ground. The mountain millmen, all of them honorary members of the Northwest Retail Lumber Dealers' Association, have resigned from that body, and in future the mountain mills will sell to any person who has the necessary cash, whether he be settler or retail dealer. The British Columbia Lumber and Shingle Manufacturers' Association, embracing all the coast lumber and shingle mills, also has affiliation with the Retailers' Association in the Northwest, and it is now a question if the understanding between the two bodies can be maintained in the face of the creation of an open market. The Mountain Mills' Association proposes to open supply depots at all important points in the prairie country east of the Rocky Mountains. This is looked upon as being one of the most important moves in a trade sense which have been made for a long time, and the farmers of the western plains believe it will redound greatly to their benefit.

Farnworth and Jardine, Liverpool, under date 1st September, report conditions in the trade in the United Kingdom as under:—

The arrivals from British North America during the past month have been 32,024 tons register, against 35,365 tons register during the corresponding month last year, and the aggregate tonnage to this date from all places during the years 1902, 1903, and 1904 has been 314,067, 308,015, and 324,683 tons respectively. The business of the past month has been very dull. Imports all round have been ample, though some articles in timber show a marked reduction as compared with recent years, and which is very necessary. The deliveries, with the exception of Canadian timber, have been fair, but stocks generally are heavy, and values difficult to maintain. Moderation in consigning is very desirable. With regard to Canadian woods: of waney there has been a very light import—on merchants' account—but the demand continues quiet, and the deliveries have been disappointing; stocks are ample, but there is little change in value to report. The arrivals of square pine have been only about 2,000 feet, but there has been little enquiry, and stocks are sufficient; prices are fairly steady. Red pine has not been imported, and there is little demand except for occasional special requirements; stocks are sufficient. There have been no direct imports of oak logs this season, but the demand is exceedingly quiet, the deliveries small, and stocks are ample; there is little change to report in value. Elm—There have been no arrivals; with fair enquiry for first-class wood the deliveries have been satisfactory, and stocks are moderate; values are firm. For ash the demand is very limited. The arrivals of pine deals, although less than corresponding month last year, have been large; the deliveries have been disappointing, and stocks which have further increased are too heavy; values for some descriptions are weaker. The demand for red pine deals is dull; stocks are ample.

New Brunswick and Nova Scotia Spruce and Pine Deals.—The arrivals during the past month have been on a liberal scale, although less than the corresponding month last year, viz.: 13,340 stds., against 15,560 stds. in 1903; the deliveries have been large, but the business has not been satisfactory, and as stocks are heavy it is desirable consignments should be further curtailed; prices rule low, but have recently shown rather more firmness. The demand for pine deals is dull, prices are low, and stocks are heavy. Of birch logs the arrivals have been moderate, chiefly from the lower ports; the deliveries have been fairly satisfactory, and stocks are not too large, but values are easier. Planks have also been imported very moderately, and the stock is light, but there is little improvement in value to report.

United States Oak—The arrivals have been small, but the demand continues very quiet, and prices rule low. Of planks the arrivals during the past month have been moderate, there has been a fair consumption, and the stock is somewhat reduced, but is still too heavy; good specifications of first quality planks are still in fair demand. The total stock, including outside depots, now amounts to 490,000 cubic feet.

Baltic and European Woods—The arrivals during the past month have been thirty-nine vessels 23,465 tons register, against thirty vessels 19,959 tons register during the corresponding month last year. Fir Timber—There has been no import, the deliveries have been more satisfactory, but the demand is limited, and stocks are sufficient; prices are fairly steady. Red and white deals have arrived very freely, chiefly for Manchester; the deliveries have been fair, but stocks are large. Flooring boards (whitewood) have again been imported freely; the deliveries have been fair, but stocks are sufficient; values are steady. Galatz, etc.—The import consists of about 1,000 standards, chiefly for Manchester; the consumption has been small and the stock is ample.

SOME MONTREAL SIGHTS.

To visit Montreal for the first time is a revelation to the Ontarian; to visit it in 1904 is to a former resident an inspiration. Whatever reproaches the city may have deserved formerly because of conditions arising in part from the original laying out of the plan, in part from rapid growth, which, by the apathy of the authorities, was permitted to be fungous growth, are being gradually removed, and the city advances in stateliness and beauty. To look at Dominion Square from the steps of the Windsor—to stand on Place d' Armes Square and gaze at the noble buildings that surround it—to linger among the attractions of McGill University—to ramble amid the vastnesses of the Angus shops, as the C.P.R. have named their new Maisonneuve works, after their much-esteemed chairman of committee—to witness the appropriate transformation of the always handsome Albert Buildings into the still more imperial-looking Imperial Bank Chambers—to surrender one's self to the fascination of that marvellous interior of the Bank of Montreal—to sit upon the brow of Mount Royal, enjoy the Park and drink in the landscape—any or all these must remain in the memory as outstanding points in the development of a city of which every Canadian should be proud.

Just as the trans-Atlantic tourist revisits New York after many years' absence and finds the sky-line as seen from the harbor all changed by the sky-scraping structures of that aspiring city, so, but happily in less degree, the traveller who revisits Montreal to-day by water route sees as he passes the city front a wondrous change. The parish church is no longer the overshadowing feature; our Lady of Bonsecours has her attraction; the revetment wall forms a new and striking horizontal line; the imposing dome of the Cathedral of St. James improves the view; tall chimneys tower (one wishes he did not have to add, and belch black smoke), and fine commercial structures of six, seven, eight stories compete in height with spire and tower of church and public building.

The harbor works are in a greater degree of forwardness than any of the strangers had expected to see them. An important factor in their construction is the profuse use of cement and concrete. Great piers of concrete are already built on the landward side of the guard pier, which, we were told, is to be wholly faced with cement. Going westward, we found, parallel with the old locks and canal basin, two new locks of cut stone, and beyond these, great wharves of wood and concrete bounding the new basin, on the border of which slowly rises the Grand Trunk new steel elevator. This basin, now in some parts shallow, is being steadily dredged to accommodate deep-draught steamers, who will come to it to load grain for Liverpool or to discharge coal from Cape Breton. An enormous amount of work—construction, filling in, dredging, extension of piers and the like—has been done by the commission in the last year or two. It may be that the huge slate-colored rectangular mass of ugliness that has arisen in the very middle of the harbor was a commercial necessity. Let us not stop to argue this point now. If it must be conceded (which I do *not* admit) for lack of time and space to argue it, the more the pity, for, looking from the water, say, going down the river on an R. and O. boat, it hides the most interesting part of the city front, dwarfs the towers of Notre Dame, obscures Mount Royal itself. No artist, no traveller, no admirer of nature, nobody but a dyed-in-the-wool utilitarian will forgive the men or the considerations that destroyed the symmetry of Montreal Harbor by placing that grain elevator where it is.

Montreal has always been proud of her fire brigade, and, speaking generally, she has for many years had a fire brigade to be proud of. Conditions have changed much, however, since the days of Alfred Perry, and the street entanglements created by electricity render the task of fighting fire in her narrower streets one of great difficulty and great risk. It is admitted by those best qualified to judge that the brigade needs larger equipment and more men. The men have been or are being supplied, and the city council is being slowly aroused to see that the increased area of the city and the greater values to be protected demand a better and more modern equipment in 1904 than in 1894 or in 1884. It was a little hard upon the gallant fellows of the brigade that, within a few hours of a serious fire in the densest business quarter of the city (which burned $300,000 worth of property and kept the firemen at work from 1 a.m. to nearly 9) they had to turn out at noon of Wednesday for the delectation of visiting manufacturers, visiting engineers, and a labor union convention. No one would know, however, from the admirable condition shown by the men, horses, and machines that passed along Dorchester Street that many of them were but three hours from an exhaustive tussle with the fire fiend. The visitors from across the Atlantic seemed particularly impressed with the exhibition given of the prompt working of the brigade. J. H.

Montreal, Wednesday evening.

FIRE INSURANCE NOTES.

On the evening before the centenary dinner in Montreal of the Phœnix Assurance Company, a presentation was made to Mr. A. T. Paterson, senior of the firm of A. T. Paterson & Son, of a testimonial on behalf of the directors, in recognition of his long connection with the company and as a memento of the centenary occasion. The testimonial is a fac simile of the mace which was provided at the time the Phœnix Company was started, 120 years ago. It consists of a figure of Britannia, in silver, with shield and trident, and is mounted on an ebony pedestal. This handsome object appropriately occupied a position on the table in front of Mr. Paterson, the chairman of the dinner.

The death of Mr. George Simpson, manager for Canada of the Royal Insurance Company, has brought about changes in the Canadian staff. These are announced by the general manager in London as follows: Mr. William MacKay, who for some years past has been assistant manager, is appointed Canadian manager, while Mr. J. H. Labelle becomes assistant manager and Mr. Geo. Jacoby, general superintendent. It is more than twenty years since Mr. MacKay entered the head office in Montreal, and he has practically passed through every grade in the staff. In 1886 he was named inspector, and in 1896 became assistant manager of the Royal and Queen's insurance companies. Since the death of Mr. Simpson Mr. MacKay has been acting manager. Mr. J. H. Labelle, who becomes assistant manager, entered their employ in 1883, and in 1891 was named inspector. He became superintendent of the Norwich Union Fire Office in 1900, but in the following year returned to the Royal as second assistant manager.

LABOR CONGRESS.

This week—simultaneously with the convention of the Canadian Manufacturers' Association—there was held in Montreal the twentieth annual meeting of the Dominion Trades and Labor Congress. The most interesting feature was the address of Mr. John A. Flett, of Hamilton, who has been president of the Congress for many years. This gentleman complained that the Federal Parliament had devoted the major part of its time during the session to the interests of corporations. Another point of great importance in his eyes was the attitude of legislators towards the cause of labor. There was, he thought, a necessity for increased representation for labor. After a few hits at employers' associations, which, he claimed, had been guilty of the most utter disregard of law and order, Mr. Flett took up the "union shop" question, saying:

"Trade unions undoubtedly should have the same right to do collective bargaining as has any other form of corporation, one of the alleged complaints of employers being that our unions at times violate their agreements. While this may be true in some instances (our organizations not claiming perfection), we venture to assert without fear of successful contradiction, that agreements entered into by labor organizations and their employers are as free, if not more so, from breach or violations as those of any other element in the community, and labor unions are becoming more conservative in their methods as time progresses. In view of what has been stated I would urge upon our people everywhere to hold all obligations, agreements, or contracts as binding upon their honor, and to be lived up to religiously. I recognize it as a pre-requisite and necessary condition to the due observance of contracts, and the proper carrying out of the terms, that all employees should be subject to regulation and discipline by the organizations entering into the agreements or contracts."

As we have remarked before, if the unions would listen to the advice of their wiser leaders, both their members and the general community would be much better off than they are. The trouble is, the unions are so often led by men who either do not fully realize the responsibility of their position, or else in time of stress become demoralized and lose grip under the steady pressure of the most lawless of their followers.

◆

The officers and staff of the London and Lancashire Life Assurance Company were very enjoyably entertained on Saturday, at the summer home of the manager, Mr. B. Hal. Brown, near St. Bruno, Que. The day was beautiful, and gave a zest to the boating, footballing, athletics, and bowling on the green, as well as an admirable appetite for the dainty luncheon which was afterwards served. The evening was devoted to fireworks and the singing of popular songs and old French "chansons." The many guests, one and all, had a delightful outing.

REMINISCENCES OF FIRE INSURANCE.

Much of interest about the career of the Phœnix Assurance Company that was known in Canada only to the privileged few, was given publicity on Thursday evening, 15th instant, when the dinner arranged to celebrate the centenary in Canada of that company took place in Montreal. The addresses of Mr. H. B. Guernsey, general manager of the Phœnix of England, and of Mr. A. T. Paterson, so long known as its chief agent in Canada, were full of reminiscence, the one of matters relating to the founding and early conduct of the company in Britain, the other of its career in Canada. In submitting the toast of the Phœnix, Mr. E. S. Clouston spoke very happily of its reputation for fair dealing and liberality; it is, as he truly said, a solid company, and its management both energetic and enterprising.

Describing the early days of the company in Canada, Mr. Paterson showed that it had come into being through the circumstance that in 1780 the sugar refiners of London could not get the fire insurance they wanted, and so organized an insurance association without a charter. "The original voluntary association, which was formed and commenced business in 1782, under the name of the New Fire Office, soon after assumed the happy title of the Phœnix Assurance Company, which now is, and has long been, a household word in assurance circles all the world over." It began to do Canadian business in the year 1804, on the 7th March in which year, Mr. Alexander Auldjo was appointed agent for Upper and Lower Canada. In 1826 "the Canadian agency, originally held by Mr. Auldjo, was transferred to my late firm of Gillespie, Moffatt & Co., and on its dissolution, in 1889, was continued by my son and myself, so that it has been held uninterruptedly by us and our connection for seventy-eight years."

The address of Mr. Guernsey, in response, referred likewise to the earlier years of the Phœnix, and informed his hearers that the gift of a fire engine was made to the city of Montreal by the company in the year of its Canadian advent. It was such a venerable hand engine, probably, as may be seen pictured upon the calendars or letter-heads of the Sun Fire Office to-day. And, indeed, the whole conditions of fire insurance and fire-fighting at that period, crude as we of to-day may esteem them, were thought no small beer of at the time. It is in the "Rejected Addresses," called forth by the re-opening of Covent Garden Theatre, that the clever brothers Smith refer to the Hand-in-Hand, the Sun, the Union, the London (possibly the Phœnix also, although we do not remember it) and the efforts of their appliances to save London's temple of Thespis from devouring fire. "We cannot but admire," continued Mr. Guernsey, "the courage and foresight shown by those then in control of the company in extending its operations to the colonies and foreign countries, in spite of all the disturbed state of the world, between 1782 and 1816. During that period of thirty-four years no less than thirty-eight of such agencies were established, one of the latest being Paris, in 1815, a significant date, the fact showing the spirit then dominating the British mercantile world."

Elaborate and enjoyable arrangements had been made at the Windsor, and the three hundred and thirty-five guests enjoyed the dinner to the full. Altogether, it was one of the most representative assemblies which have ever come together in Montreal. The usual loyal toasts were given and duly honored. Hon. Mr. Casgrain and Hon. Mr. Fitzpatrick responded for the Senate and the House of Commons; the mayor for the city; Chief Justice Girouard for the Bench; Donald MacMaster, K.C., for the Bar; Mr. J. J. Kenny, vice-president and general manager of the Western Assurance Co., for "Sister Institutions." The gathering contained a large proportion of those prominent in the public and commercial life of Montreal, and, indeed, of Canada. There was much in the circumstances to suggest the past of Montreal—Montreal as depicted by ancient prints in the Chateau Ramezay; before Nelson's monument was built or Trinity House established; when the inhabitants had no water-works, and no fire-engines till the Phœnix sent them one; when mails were monthly, trade with Upper Canada done by flat-boats, and when John Molson was only thinking of his coming first steamer between the town and Quebec. But besides the speeches which touched upon these things there were others reminding us of a new Montreal and the Canada of to-day: a country of better-known resources, well-supplied with the appliances of commerce and the machinery of finance, throbbing with modern ideas, and having men in all walks of life capable of directing her course among the nations of the earth. At the banquet an especially pleasing feature was the music which had been provided. Mr. Harold Jarvis, the Canadian tenor, of Detroit, was present, and added much to the enjoyableness of the occasion.

THE HALIFAX FIRES.

The fire of Thursday last in Halifax affords another illustration of the desolating power of flame driven by a strong wind—a wind which in this case is described as blowing fifty miles an hour at times. The fire broke out in the wharf and warehouse premises of N. & M. Smith, extensive fish merchants; these were destroyed, and the flames, sweeping northward (the Halifax shore of the harbor runs north and south), carried away half a dozen buildings, chiefly small shops and sailors' boarding-houses, badly damaging the rear of William Robertson & Son's warehouse, and entirely destroying that of G. P. Mitchell & Sons. Travelling southward, the conflagration destroyed a warehouse belonging to the Dominion Coal Company, with 700 tons of coal; the premises of Hon. Wm. Ross and J. A. Neville, lobster packers; R. R. Kennedy, clothing; T. J. Egan, gunsmith, and several smaller places. Lastly the flames atacked the great warehouse and offices of the Canada Atlantic and Plant Steamship Company, which were destroyed, except that the warehouse down the wharf was saved.

The district was largely one of wooden buildings, and the firemen were in for a hard battle. Valuable assistance was given them by the military and naval authorities, who sent down a force of 200 or 300 soldiers and jack-tars, who brought with them two English steam fire engines from the dockyard, and a hand engine from the Citadel. For two hours the flames raged, and then the wind died down. By seven o'clock that portion of the harbor front from A. G. Jones & Co.'s warehouse, on the south, to the King's wharf, on the north, had been destroyed, except the hardware building of Wm. Robertson & Son, the flames going around its rear and sweeping away the large molasses and fish warehouse of G. P. Mitchell & Sons. Three tug boats rendered excellent help by playing heavy streams on Jones' building and others, giving an illustration of how valuable fire boats may be in such emergencies.

A late estimate puts the loss at $311,000. This is made up as follows: Plant Line wharf, $30,000; A. G. Jones & Co., $500; Dominion Coal Company, $2,000; Dominion Packing Company, $5,000; Hon. Wm. Ross, office furniture, $500; M. Neville, lobsters and supplies, $10,000; Matthew Lannigan, furniture, $10,000; Thos. J. Egan, stock, $10,000; Thos. J. Egan, building, $4,000; R. R. Kennedy, stock, $40,000; R. R. Kennedy, two buildings, $9,000. A. Collins, meat market, stock, $3,000; A. Collins, two buildings, $7,000; John Clanson, liquors, $2,000; E. M. Boutillier, fish, $3,500; Capt. John Simmonds, furniture, $2,000; William Robertson & Son, stock and building, $4,000; G. P. Mitchell & Sons, $3,000; N. & M. Smith, $100,000; A. L. Doyle & Co., $1,000. The insurance carried is, we are informed, as follows: In three local non-tariff companies, Acadia $4,500, Nova Scotia $14,420, Halifax $19,600; in another non-tariff company, the Anglo-American, $14,400; in the following tariff companies, Aetna $19,500; British America $4,500, Northern $5,200, Queen $17,100, Royal $5,000, Western $9,000, Phœnix of London $12,000, Connecticut $8,500, Canadian $3,150, London Mutual $1,600, Norwich Union $500, Union $5,000, National $4,500, Commercial Union $3,000, Liverpool & London & Globe $9,300.

Hardly was the ink dry upon what we had written above when the wires told us of another fire on the water front of Halifax, not far from the one of last week. On Monday morning early, 19th inst., fire broke out in the warehouse of Black Bros., Limited, on Black's wharf. It spread rapidly to Pickford & Black's wharf adjoining, and destroyed the following: Black Bros.' three-and-a-half story wooden building, containing hardware; the same firm's two-story wooden building to the south of their warehouse, which contained a stock of dry fish; Pickford & Black's three-story wooden warehouse, lower floors occupied by that firm and the upper floor by Thomas Forhan, as a sail loft; Leslie Hart Company, office and warehouse, and Thomas Jaynes' blacksmith shop. Besides these houses, Black Bros.' wharf was badly damaged. When the fire was thought not only under control, but practically extinguished, flames broke out suddenly in the rear of Black Bros.' fine brick warehouse. The fire had worked its way unnoticed from the wooden warehouse adjoining and the interior of the fine brick warehouse was soon ablaze. The sailors and the military were then called upon to assist the fire brigade, and the fire was prevented from spreading to the wooden buildings south of Black Bros.' warehouse, and to the wooden buildings north of the Pickford & Black premises. But the flames ate through, and soon afterward the roof of Black Bros.' store fell in, and George Cook's retail store was also destroyed. H. H. Fuller & Co.'s premises were saved. The fire was practically over at 10 a.m. The losses are given as under: Black Bros., stock, about fully insured, between $70,000; Marshal Black's buildings, $30,000; Pickford & Black, buildings and stock, $40,000; Bryant & McDonald, stock, $12,000; R. B. Seton & Co.'s stock, $12,000; G. C. Cook & Co., stock, $2,500; Thomas Forhan & Son, loss, $600; Thomas Jaynes, $400; J. A. Farquhar & Co., stock, $500; H. H. Fuller & Co., damaged by water, $3,500. The insurance was as follows: Acadia, $17,000; Nova Scotia, $8,000; Halifax, $12,000; Ottawa, $2,000; Anglo-American, $6,000; British America, $7,500; Northern, $13,000; Royal, $13,000; Western, $7,000; Phœnix of London, $5,000; Connecticut, $2,000; Norwich Union, $7,700; Union, $7,500; National, $3,000; Commercial Union, $13,500; North America, $7,500; Liverpool and London and Globe, $14,500; Law Union and Crown, $13,000; Quebec, $8,000; Phœnix of Brooklyn, $2,000.

BRIEF NOTES AT THE C.M.A. CONVENTION.

Not having been present at any of the meetings of sections, your correspondent is unable to say what was done therein, but an earnest spirit was discernible in the members of several, who hastened to get done what was to be done in Rooms 96 and 100, and Club Rooms A and B, of the Windsor. The room No. 4 close by the ladies' entrance of the hotel was naturally the most frequented, for it was the office of the secretaries.

It may be supposed that the duties of these were not light, for in addition to helping in committee work they were at the beck and call of every member who wanted letters, information, theatre tickets, banquet tickets, introductions and the hundred and one things that a hundred or two strangers might naturally require. Up to Wednesday noon 187 members had registered at this office, and it is safe to say that 200 members or more attended the convention.

A most enjoyable feature of the first day was the excursion upon the river and harbor arranged by the courtesy of the Harbor Commission. To those not accustomed to seeing 10,000 ton steamships, or, indeed, ocean-going ships of any kind, the privilege was great of seeing fine boats like the "Tunisian" or the "Dominion." And the view of the harbor and its improving features impressed the visitors from places other than Montreal.

At the general meeting on Tuesday evening the invocation of Rev. Dr. Barclay was highly impressive, and the welcome of the mayor of Montreal and the chairman of the Montreal Branch greatly pleased the members present.

The reply of Mr. George, the vice-president, did full justice to the occasion. The retiring president's address impressed all who heard it as a comprehensive and very able summary of industrial and commercial conditions in Canada. It was more: it was an earnest plea for self-help by Canadians, and for the necessity of cultivating closer relations with the United Kingdom and the Empire.

Very important reports of committees were submitted on Wednesday: those of the Railway and Transportation and Parliamentary Committees attracting, perhaps, the most attention. The secretary's report was a model of brevity and suggestiveness.

It is to be noted that the London Chamber of Commerce intimated through President Drummond that if the C.M.A. would visit the British Islands in 1905 the Chamber would take charge of them and make their road plain, not only in London, but in any industrial city they chose to visit. The announcement elicited many kindly responses, and it became very evident that the proposal of a trip to the Old Country found echo in many breasts.

A letter whose tenor was, perhaps, unexpectedly friendly and instructive was that of Mr. Parry, of Indianapolis, president of the National Association of Manufacturers of the United States. He acknowledged in warm terms the good work the C.M.A. had done, and is doing. We learned, too, that this United States body at its last meeting passed a resolution on the subject of fire insurance for its members, following very closely the lines on which the Canadian sister association is proceeding in that connection.

Mr. Robb, of Amherst, N.S., sounded a clear and resonant note when advocating the great promise contained in the suggested trip to Britain by the C.M.A. "It is an admirable proposal," he said; "any manufacturer with eyes and ears open may learn much from such a visit. London, England, is the *centre of things* for us, in various ways that we do not now apprehend. The manufacturers of Canada are too modest in estimating what they can do in competition with the world for trade. My firm had done some little export trade, but I received hints when in England that showed me where we could do more. And, gentlemen, I have received from New York and filled orders which I afterwards learned originated in London."

Mr. Younge's report, as secretary, was interesting as showing the growth of the association in three years. Where in 1901 they had a staff of three, there is now a staff of twenty. The growth in membership and the growth in number of branches has been most gratifying. Indeed, there is urgent need for larger premises and more employees at the head office.

To the writer of these notes it was especially pleasing to meet on Tuesday and Wednesday so many members who had taken part in the memorable trip of 1903 to the Pacific Coast. He shook hands on those days with 36 out of the 166 persons who were in the delightful excursion. Scores of us are looking forward with pleasure to a visit to-morrow to Mr. Drummond's picturesque home at St. Bruno, under the shadows of Beloeil Mountain.

September 21st.

BRITISH INSURANCE MANAGERS IN CANADA.

There appears to be a regular influx of important Old Country insurance men into this country just now. Mr. H. B. Guernsey, manager of the Phœnix Assurance Co. of England, was at the big dinner in Montreal on Saturday, and this week is in Toronto, accompanied by Mr. L. A. Boston, also of the London office, and by Mr. R. McD. Paterson, the Canadian manager. Mr. James Allan Cook, general manager of the Scottish Union and National Fire Insurance Company, has arrived in the United States from Edinburgh for the purpose of acquainting himself with the conditions and methods of fire underwriting and fire-fighting on this continent. Mr. J. Clunes, of the London Assurance Corporation, is expected shortly. Mr. Charles Alcock, general manager of the Royal Insurance Co., London, has been making a tour of inspection—and of appointments—in this country, as announced elsewhere. He will be in Toronto on Friday and Saturday, and then will go on to Winnipeg. Mr. F. W. P. Rutter, manager of the London & Lancashire Fire, was in Montreal, Quebec and Toronto early in the week, and has now gone on to Chicago. He intends to visit the Southern States before returning to England. Lord Claud Hamilton, chairman of the Employers' Liability Assurance Corporation, is another recent arrival in the United States. Mr. S. G. Pipkin, general manager of the Atlas Assurance Company, is expected shortly. Mr. Jno. Large, secretary of the Norwich Union, has been here this week making an extensive tour in the United States and Canada.

AMERICAN BANKERS' ASSOCIATION.

In spite of the unfavorable weather which prevailed in New York last week, the thirtieth annual convention of the American Bankers' Association, which took place at the Waldorf-Astoria on Wednesday, Thursday and Friday, was a great success, over three thousand members being present. As an illustration of the way in which the association has grown in recent years it may be pointed out that while in 1875 the membership totalled 1,600, and in 1895 it was only 1,570 it now stands at 7,563. The aggregate capital surplus, and deposits of all the members of the association amount to $11,290,686,637, a sum which probably it is rightly claimed is larger than that represented by any other organization, institution or corporation in the history of the world. We have not space to give more than a summary of some of the many important subjects discussed, and even this will needs be brief.

The assembled members were welcomed by Mr. James Stillman, president of the National City Bank, who spoke on the importance of the spirit of co-operation. In the field of industry, the beneficent economic results which have followed this awakening to the value of co-operation have become too obvious to need any word of emphasis. In the field of finance, however, there is not yet such general recognition of the value of co-operation. Mr. Stillman believes there is no more important thing left for bankers to learn. When we come fully to appreciate the great economic value of co-operation, when we see more clearly the waste which follows unintelligent competition and understand that such waste means as complete a loss of wealth as comes with a disastrous fire or a blight of crops, we shall have brought into the business of banking something of the modern spirit which has so marked the present-day development of industrial affairs.

Then followed Mr. F. G. Bigelow, the president of the association, with his annual address, who discussed currency legislation. With any sort of a proper system of currency, he said, there was no need for an emergency circulation. It was Mr. Bigelow's increasing conviction that there should be a credit currency under sharp compulsory redemption, with the same reserves in coin as against deposits. A bond-secured currency never did, and never can, respond to the demands of trade. It is a wasteful system of tying up capital, and lacks elasticity, expanding and contracting only with the price of bonds.

Other interesting papers were read by Hon. A. P. Hepburn, of New York, upon the "Money Situation"; by Eugene Prussing, of Chicago, on the "Trust Company Problem"; by Ellis H. Roberts, treasurer of the United States, upon "American Finance"; by A. J. Frame, of Waukesha, Wis., on "Emergency Circulation"; and by W. C. Robinson, of Winfield, Kan., upon "The Western Banker."

At the Friday session Mr. E. F. Swinney, president of the First National Bank, of Kansas City, Mo., was elected president, and James R. Branch, Hanover Bank Building, New York, secretary.

SERIOUS FIRE IN MONTREAL.

About 1 o'clock on the morning of the 21st, a disastrous fire broke out in an important wholesale section of Montreal, near the rear of Notre Dame Church. It broke out in the premises of the Canadian Hardware Company, midway in the block between St. Sulpice and St. Claude Streets, and the five flats were soon a raging furnace. From there the fire spread to the Central Agency's warehouse on the west, and Chaput, Fils & Cie on the east. The Central Agency is the warehouse of the British Thread Trust. The fire was an exceptionally fierce one, and notwithstanding thick firewalls, we are told, made its way through them, despite the efforts of the entire city fire brigade, which was called into service. Scarcely anything but the walls of the Canada Hardware warehouse is left, but the fire was stopped before it reached the extreme western section of the Chaput warehouse. The burned block is the property of the Grey Nuns. The losses are given as follows: Canada Hardware Company's building (total loss), insurance in the Liverpool & London & Globe, $15,000, contents insured in the Aetna for $5,000, Caledonian $5,000, Hartford $5,000, Home $7,000, Liverpool & London & Globe $5,000, London Assurance $10,000, National $5,000, Northern $5,000, Norwich Union $10,000, Sun $5,000, Western $13,000; Chaput & Fils' building, estimated loss about 40 per cent., insured in Alliance for $36,000, Liverpool & London & Globe $20,000, Royal $4,000 (fixtures); contents (loss 75 per cent.), in the Aetna for $7,500, Alliance $10,000, Atlas $10,000, Caledonian $10,000, Commercial Union $15,000, Guardian $17,500, Hartford $10,000, Home $20,000, Law Union & Crown $5,000, London & Lancashire $5,000, London Assurance $10,000, North America $15,000, North British & Mercantile $15,000, Northern $15,000, Norwich Union $10,000, Phœnix of Brooklyn $10,000, Phœnix of London $25,000, Quebec $7,500, Queen $10,000, Royal $28,500, Scottish Union & National $20,000, Sun $10,000, Union, $7,500, Western $10,000, Mount Royal $5,000, Central Agency, building, Liverpool & London & Globe $15,000; stock (25 to 50 per cent. estimated loss), Commercial Union $3,000, Guardian $5,000, North British & Mercantile $16,600, Royal $16,000.

CHARTERED ACCOUNTANTS ASSOCIATION.

The annual meeting of the Dominion Association of Chartered Accountants has just taken place in Montreal. The following officers were elected: President, W. H. Cross, of Toronto; first vice-president, A. W. Stevenson; second vice-president, John MacKay; treasurer, A. F. C. Ross, of Montreal; secretary, James George, of Toronto. Council—J. F. Cunningham, of Ottawa; Henry Barber, of Toronto; W. Simms Lee, of Halifax, N.S.; F. S. Sharpe, of St. John, N. B.

The report of council for the past year was received and adopted.

The treasurer's statement made it clear that after organization expenses had been met, there would be a balance in the treasury. The association appointed three delegates to attend the Congress of Accountants to be held at St. Louis on the 26th, 27th and 28th inst.

BANK OF BRITISH NORTH AMERICA.

It is shown by the report to the end of June that the earnings of the British Bank for the half year have been £30,619 7s. 11d., to which must be added £6,756 0s. 10d. brought forward. Out of the aggregate, dividend at the annual rate of six per cent. is declared. There has been put aside the sum of £4,180 to meet depreciation in the bank's investment in Dominion of Canada bonds, which will hereafter stand in the books at 97, and the following appropriations from profit and loss account have been made for the benefit of the staff, viz.: To Officers' Widows' and Orphans' Fund, £513 14s., and Officers' Pension Fund, £529 9s. Since the last report branches have been opened at Calgary, North-West Territories, and Bobcaygeon, Ontario; and sub-branches at Hamilton, Ont. (Barton Street); London, Ont. (Market Square); and Trail, British Columbia, (sub-branch to Rossland). The bank's assets amount to £8,499,431, which is equal to $41,307,000, of which $13,700,000 is in cash or at short notice. The reserve fund amounts to £400,000 sterling.

—The Bank of British North America has opened a branch at Campbellford, Ont.

CLEARING HOUSE FIGURES.

The following are the figures of the Canadian Clearing Houses for the week ended with Thursday, 22nd September, 1904, compared with those of the previous week:

	Sept. 22.	Sept. 15.
Montreal	$21,306,292	$20,582,661
Toronto	17,344,340	16,277,967
Winnipeg	4,729,382	4,886,741
Halifax	1,793,151	1,865,094
Hamilton	1,128,017	1,147,129
St. John	1,051,894	1,084,331
Vancouver	1,730,511	1,651,612
Victoria	565,650	726,266
Quebec	1,541,957	1,524,110
Ottawa	....	2,030,026
London	840,100	868,114
Total	....	$52,644,051

NORTH OF ENGLAND LETTER.

The many Canadians who seek protection for inventions in this country will be interested in the forthcoming change in the English Patent Law. After the end of this year the Patent Office of the United Kingdom will relieve inventors of some anxiety by making an exhaustive search of the records for fifty years back. This, ordinarily, has been a highly expensive proceeding, but the official fee will not in any event exceed five dollars. Should it appear that claims have been forestalled, wholly or in part, the Comptroller reserves the right to interpolate into the Letters Patent any references to earlier specifications. It must be understood that the scrutiny conveys no guarantee of originality, and that no recourse is available against any individual in the case of error. Machinery is provided for an appeal against the decision of the Comptroller, which may be heard by the law officers of the department.

Radical papers continue to devote space to all evidences that can be found of Canadian hostility to the Chamberlain propositions. The attitude of the colonies, and in especial that of the Dominion, is vital to the fiscal schemes. Realizing this, the hostile press is strenuously anxious to make the most of Canada's industrial ambitions. So the public here is growing familiar with the utterances of Conservative legislators and newspapers in so far as those pronouncements tell against the policy of inter-Preference. The Toronto "News," Mr. Kendry, Mr. Yonge, Mr. Forbes, of Hespeler, Mr. Randall, of Waterloo, and Mr. Rosamond, of Almonte, are amongst the authorities cited. On top of all this come comments on Canada's increasing trade with the States and your steel and lead bounties. The sober view of matters is that the air wants clearing, and men look to Mr. Chamberlain to further expose his intentions in the autumn campaign of speech-making.

Doubtless the daily press of the Dominion will have furnished biographies of the new Governor-General in abundance. If it has been made plain that Earl Grey is a business man of large capacity, so much the better. He is also a devotee of natural beauty. The Garden City scheme, which is to found factories and raise cottages amid park-like surroundings, found one of its earliest advocates in Lord Grey. Those who oppose the uglification of Canada, the pollution of water-courses, and the bad management of towns will find a statesman on their side who possesses an amount of tact that has been denied to some high officers from Britain.

At the Confectionery Trades Exhibition in London the Canadian High Commissioner has been making somewhat of a display. A hundred-foot stall burdened with forty tons of produce daintily arranged has been impressing the London crowd. Favorable opinions were formed of what the trade calls the "dressing" of the canned and bottled wares. Too much stress can scarcely be laid on the imperative necessity of a handsome exterior for such goods. Chemists and grocers here appreciate good-looking stuff, and give it a good show-place in their shops. Some of the United States food products that sell here owe as much probably to their wrapping as to the contents. Mr. W. H. Hay, who supervised the arrangements at the Exhibition, declares his more substantial goods were superior to any coming from across your frontier. Whether such be the case or not, his efforts have been rewarded by such encomiums as one now quoted: "The trade of the Dominion is bound to be benefited."

On the subject of advertising Canada, might one ask why we here see nothing of Canadian pictorial post-cards. These pass in millions through the post, and are menacing our post-office profits, but one has not seen many depicting life in your country. That such would sell if adequately produced is out of all doubt. A colonial series of views would handsomely repay some English publisher. Conceivably, their export might be remunerative. If not, the Government or some great corporation might take a lesson from our own L. and N.W. Railway Company. To advertise itself this line is now selling packets of beautiful cards at twopence. Each packet contains six cards, and as the net cost is supposed to be about three halfpence, the transaction should be satisfactory from all points of view. It may be added that the normal price retail of the picture card is one penny.

Still another of those quaint "insurance" companies that provide workpeople with homes called "free" has ignominiously failed. The Artisans' Free Homes, Land, Investment and General Insurance Co., Limited, of Birmingham, despite its imposing title, has not lived four years. Creditors lose £2,518 and shareholders £25,741. Hundreds of poor people are now faced with a demand for £8,207 of capital hitherto uncalled, which will be a charge on their humble incomes for years to come. Of course, these occurrences are nothing short of calamitous to the cause of thrift, and the harm done to genuine concerns is immeasurable.

An advertisement in the Manchester papers for managers for Canada struck one as potentially interesting; the more so since appointment entailed investment, and presumably in an insurance company, real or alleged. The matter is, however, one rather for Canadian photographers to ponder. The Midland Counties Photo Co., Limited, of Birmingham—which may be financially as estimable as the Bank of England—asks eight people to pay £250 each for shares, and thus to qualify for managerships in Halifax, Montreal, Ottawa, Quebec, Toronto, Vancouver, Victoria and Winnipeg. The selected need have no experience, and will be provided with free houses, coals and light. The salary will be £150, with commissions added which range from 2½ to 33 1-3 per cent. The business is obtained by canvassing among customers, who pay by instalments for the photographs, frames, colored enlargements, etc., that such companies traffic in. Subject to the approval of the company, managers are allowed to hold agencies for insurance. No comment is necessary on the curious fact that men of no colonial experience are invited to become shareholders and managers abroad, or on the other fact that the managing director is in no haste to furnish particulars of the stability of the enterprise. On this side, the class of business is held in no great veneration, and it is credible that £250 can be put to even better service than this particular one.

NORTH COUNTRY.

Manchester, Sept. 9, 1904.

ADDRESS YOUR LETTERS CAREFULLY.

Sir,—In the course of one of the Australian letters regularly published in your paper is found the following incident: "A Melbourne man, who had been getting his documents regularly, found them unaccountably ceasing to reach him. After long delays and enquiries he discovered that, instead of being addressed in full, the Canadian youth who addressed them in Toronto concluded he could economize his labor by marking them: 'John Ferguson, Melbourne, Australia.'" I would like to confirm the complaint made above with regard to much of the Canadian correspondence to Great Britain. English towns have large populations, and it is totally against either business custom or social etiquette to clip the full names of streets or to omit the prefix of "Mr.", or else the courtesy title of "Esq." (Esquire), when addressing one's correspondents. This is an American custom which is not tolerated in any section of the United Kingdom—including Ireland, particularly. The higher-class merchants are careful to note this peculiarity—to do successful business it is wiser for Canadians to note also.

Yours faithfully,

"INTERCOLONIAL TRADE."

Eastern States and Canadian professional men also will welcome the British and other accountants making the long and arduous journey.

One of the most prominent visitors will be the delegate of the widest-working organization, the Incorporated Society of Accountants and Auditors, with 2,060 members on its roll in 1903, practising in the United Kingdom and throughout the Empire. Its colonial members have governing councils in Australia and South Africa, also Scotch and Irish councils sitting at Glasgow and Dublin respectively. The gentlemen selected to represent this Imperial body of accountants is the London secretary, Mr. James Martin, F.S.A.A., F.S.A.; and we find that some years ago he had acquired a theoretical acquaintance with acccountancy movements in the States and Canada. In a paper read before an accountants' conference at Manchester (Eng.), reviewed in our issue of the 3rd November, 1899, Mr. Martin lays stress upon the status conferred upon our Ontario Institute of Accountants by the prestige of the distinct Act of Parliament incorporating the Ontario organization. A visit made to South Africa on a special mission during the winter of 1894-5 resulted in organizing South Africa public accountancy to a prominent position.

Mr. Martin is, we understand, a corresponding member of the Incorporated Institutes of Accountants in Victoria and South Australia, and the Tasmania Institute of Accountants. His life-work in accountancy has been devoted to the welfare of the incorporated Accountants' organization and its colonial expansion policy, together with the movement among the most advanced thinkers in the profession to secure statutory registration of public accountants by the Imperial Parliament and Colonial Legislatures.

◆

LIFE AND ACCIDENT EXTRACTS.

A comparison of the experience of stock companies writing personal accident insurance in the United States in 1903 has been made by the New York Spectator. It shows wide differences in loss ratios in the various sections of the country. States adjoining each other, in which the conditions of life and occupation are very similar, show wide differences in the ratio of losses incurred to premiums received. The State of New York, for example, shows a loss ratio of 37.1 per cent. to premiums received, and New Jersey 58.7 per cent., but probably most of this high loss ratio for New Jersey was caused by one serious railroad wreck which occurred during 1903, although the previous year showed a loss ratio of 48 per cent. The experience of the companies in other States is given as follows:

	Prem.	Los. Inc.	Loss to Prem.
New York	1,930,087	715,387	37.1
New Jersey	163,367	95,850	58.7
Pennsylvania	1,164,050	500,088	43.0
Delaware	24,054	7,362	30.6
Maryland	127,715	55,886	43.8
Dis. of Columbia..	67,860	33,882	49.9

A decision against sky-scraping buildings has been reached by the Maryland Casualty Company, which was burned out at the great Baltimore fire. The new home office building to be erected by this company is to be three stories high, and will cover the entire lot of ground, the dimensions being 209 feet on North Street, 39 feet on Baltimore Street and the same on Fayette Street. Immediately after the conflagration of February 7th and 8th last the board of directors took up the question of rebuilding, and the advisability of erecting an eleven-story office building was considered. After a thorough investigation of every phase of the subject the board decided that the interests of the company can best be conserved by limiting its home office building, above the ground floor, to the company's own needs. Hence, a three-story building instead of eleven stories.

Get out of the rut is the advice given by the Pittsburg Life News to life assurance canvassers. "Get out of the thicket. Don't always seek the easy road. Many, no doubt, have travelled it before you and picked up any stray pearls by the wayside. Remember that life insurance is secured in unexpected places, but not very often by the man that does not expect to find it there. The successful men are those who are constantly finding new channels through which they may secure business."

According to a report in the Bulletin of the United States Fidelity and Guaranty Company, Baltimore, Md., the embezzlements for the month of June amounted to $755,044. Of these, most were in connection with banks, which accounted for $584,000, court trusts were responsible for $89,000, Federal and State offices for $37,521, the balance being divided amongst firms and corporations, municipal defalcations, etc.

A book whose value is by no means indicated by its modest size is "Care of Invalids," issued this year by the Mutual Life Insurance Company, of New York. Its contents are manifestly the result of experience and intelligent observation, and there is much in its chapters upon food, bedding, and drainage that may be read with profit by those who are perfectly well. In its forty pages are sections devoted to Ventilation, Disinfectants, Rest, Cleanliness, Light, Temperature, Clothing. Quotations are made from such authorities as Dr. Christison and Florence Nightingale on food and nursing. This is an excellent companion to the books issued in former years by the same company on Accidents, Emergencies and Remedies for Poison. One or all these will be sent free to any person who will enclose three cents postage for each address.

◆

—Thanksgiving Day will not be in October this year. Thursday, 17th November, is the day chosen. We do not enquire too closely into the reasons for this choice. It is perhaps sufficient to notice that the Canadian thanksgiving will be observed this year a week in advance of Thanksgiving Day in the United States.

BANKERS

MONTREAL—Molsons Bank; Imperial Bank of Canada.
NEW YORK—The Importers and Traders National Bank
LONDON ENGLAND—The National Bank of Scotland.

REPORT OF THE DIRECTORS OF THE BANK OF BRITISH NORTH AMERICA TO THE PROPRIETORS.

The court of directors submits the accompanying balance sheet to the 30th June last.

The profits for the half-year, including £6,756 0s. 10d., brought forward from last account, amount to £37,375 8s. 9d., out of which the directors have now to report the declaration of an interim dividend of 30s. per share, payable, free of income tax, on the 7th October next, being at the rate of 6 per cent. per annum, leaving a balance of £6,332 5s. 9d. to be carried forward.

The dividend warrants will be remitted to the proprietors on the 6th October next.

The sum of £4,180 has been set aside out of the profits of the half-year to meet the depreciation in the bank's investment in Dominion of Canada bonds, which will hereafter stand in the books at 97.

The following appropriations from the Profit and Loss Account have been made for the benefit of the staff, viz.:

To the Officers', Widows', and Orphans Fund..	£513	14s.	0d.
To the Officers' Pension Fund	£529	9s.	0d.

Since the last report, branches have been opened at Calgary, North-West Territories; and Bobcaygeon, Ontario; and sub-branches at Hamilton, Ont. (Barton Street); London, Ont. (Market Square); and Trail, British Columbia (sub-branch to Rossland).

London, 6th September, 1904.

Note.—The last monthly return received from Dawson City is that of the 31st May, 1904, and the figures of that return are introduced into this account. The balance of the transactions for June with that branch has been carried to a suspense account, pending the receipt of the June accounts.

We have examined the above balance sheet, with the books in London, and the certified returns from the branches, and find it to present a true statement of the bank's affairs.

Edwin Waterhouse, }
George Sneath, } Auditors,

Of the firm of Price, Waterhouse & Co., Chartered Accountants.

London, 19th August, 1904.

◆

CURIOUS ACCIDENTS.

The Fidelity and Casualty Monthly Bulletin gives the following peculiar accidents:

During the process of tiling the slanting roof of an athletic club in this city, a workman who was astride the ridge-pole, putting on the last layer of tiles, shifted his position so that both feet were on the same side of the ridge-pole. He slipped, and, sliding down the roof, shot over the eaves to the ground, some 120 feet below. At the particular place he fell there was a pile of shavings and refuse about ten feet high. This pile existed by reason of a chute connecting with each floor of the building, down which the carpenters and other workmen on the building were in the habit of throwing refuse. The man bounced once or twice on the pile of chips, received absolutely no injuries, and in the course of fifteen minutes was back again at his work.

In Chicago, some years ago, at a large varnish manufacturing establishment, the men were accustomed to be trained at fire drill whenever the alarm was given. On one occasion the men were lined up with fire-extinguishers on their backs. Probably because of long storage, the decomposition of the chemicals contained in one of the extinguishers had made the pressure within the extinguisher greater than it was calculated to bear. The result was that the bottom flew out, and the man, in the semblance of a human rocket, was shot up off his feet and out through a window, and, falling, was killed.

One of the high buildings in this city was just about finished, and the contractor was engaged in clearing it up. On the floor half way between the basement and the top floor, stood a barrel of lime which had not been used. A single block, with a one-part tackle rove through it, had been hung at the top floor. The workmen on the seventh floor slung the barrel of lime in a loop, and called to a workman on the first floor to lower it. They then swung the barrel off into the elevator-shaft. The lime was heavier than the man below, and lifted him off his feet. He became frightened, but held on. The lime went down and the man went up. The barrel reached the floor and struck it with a blow sufficient to knock out the bottom and to release a part of the lime. The rest of the lime being caked somewhat, stayed in the barrel. The man now, being heavier than what was left of the lime, came down again while the barrel went up, but so gently that the man, in his trip of some seven stories up and down, received no injuries whatever.

Some years ago, at Donaldson, La., an explosion of a boiler took place while a negro happened at the moment to be on top of it. The boiler was thrown in one direction and the negro in another. In his flight the negro passed over a building thirty-five feet high and fifty feet broad, and lighted upon the roof of another building some ten feet lower than that over which he was thrown. Upon being asked by the company's representative how long he was in the air, he replied: "I cannot tell you exactly, sir. I did not look at my watch." He received no injuries whatsoever.

Mercantile Summary.

The New Brunswick Importing Company, Limited, has been incorporated. F. B. Schofield and Andrew Malcolm, of Fredericton, are among its members.

The Le Roi No. 2 Mining Company, Rossland, B.C., has taken out an option on the Evening Eureka group of claims near its own property, and has started development work on an extensive scale.

The Western Coal and Oil Company is said to have struck good luck in the shape of oil and gas at its No. 2 well on Coal Oil Creek, in Waterdown Lakes region, Alberta. The strike was made at a depth of 617 feet.

Milling operations on the White Bear Mine, Rossland, having been interfered with owing to the shortage of water, the company is building a flume to convey water from a neighboring creek. Great progress is reported having been made in development work on this property. A good deal of money has been spent in putting in up-to-date machinery, and great hopes are expressed for the future.

The annual meeting of the Montreal Park and Island Railway has been held, and the old board of directors re-elected, as follows: Hon. L. J. Forget, president; Mr. K. W. Blackwell, vice-president; Mr. W. G. Ross, managing director; Sir Montagu Allan, Lt.-Col. F. C. Henshaw, Mr. F. L. Wanklyn, and Mr. D. Macdonald. Mr. Patrick Dubee is secretary.

A report to the United States Bureau of Industrial Statistics says that the year 1903 was a prosperous one in the production of iron and steel, pig iron and anthracite and bituminous coal and tin plate. In these industries a total of 182,654,843 tons were produced, 435,774 workmen employed, receiving in wages $241,677,718, and the market value of the production was $774,963,777.

Intelligence has been received by the Ontario Crown Lands Department to the effect that in the district north and west of Chapleau, on the C.P.R., there exists a stretch of good agricultural land 200,000 acres in extent. The report is that there are from eight to ten townships of as good land as exists in the province of Ontario. The district is said to be particularly good for farming purposes, being well watered and attractive in every way. This is evidently a dip down of the lower end of the clay belt. The country surrounds Trout Lake, and is situated due east of the Michipicoten iron country.

The contract for putting on a steamship service from British Columbia to Mexican ports has been awarded to Andrew Weir & Co., Glasgow, Scotland. This firm will receive a subsidy of $100,000, contributed half by the Canadian and half by the Mexican Governments. Steamships will run monthly between Vancouver, B.C., and the Mexican ports of Mazatlan, San Blas, Manzanillo, Acapulco, Puerto Angel, Salma Crux, Tonala and San Beneto. The service is for five years. It is hoped to inaugurate an Atlantic service.

Among the interesting exhibits at the recent Provincial Exhibition at Halifax, we note that of A. M. King, who sent twelve pieces of gold-bearing quartz, valued by an expert at over $3,000. They are said to be the richest ever seen in the province, and were taken from the King or Ophir mine, near Caledonia, Queen's County. The company is now sinking a shaft on a thirty inch lead with the intention of raising about 50 tons of quartz and having it put through a mill test.

STATEMENT OF BANKS acting under Dominion Gov't charter, for the month ending Aug. 31st, 1904.

A despatch from Chicago, dated Sept. 15th, stated that the great Pullman car works, at Pullman, were shut down on that day, and that practically every one of the company's 7,000 employees was then idle. The workmen were told to take their tools with them when they left the works, and from this it is inferred that a considerable period of idleness confronts them. The closing came when the 1,500 workers in the repair department were laid off. That had been the only branch of the plant in operation for some time. The company is reported to place the blame for the closing down upon the high wages they have had to pay.

Mercantile Summary

The Anderson Furniture Co. are now engaged in completing the construction of their new factory, at Newcastle, N.B. A specialty will be made of the manufacture of chairs.

S. Hoffman & Son's dry goods store and the Creaghan building, at Chatham, N.B., were last week destroyed by fire at a loss altogether of about $16,000, and insurance of $6,000.

On the 15th inst. was turned the first sod of the Goderich and Guelph section of the Canadian Pacific Railway. Work started on the north bank of the Maitland river. A large number of railroad officials and citizens interested were present to inaugurate the construction.

Shipments of ore from the Rossland district of British Columbia for the week ending last Saturday were as follows: Le Roi, 2,000 tons; Centre Star, 1,450 tons; War Eagle, 1,260 tons; Le Roi, No. 2, 480 tons, milled 300 tons; Spitzee, 30 tons; Jumbo, 300 tons; Cliff, 30 tons; Velvet Portland, milled, 250 tons; White Bear, milled, 100 tons. Total, 6,200 tons. For the year up to date, 251,908 tons.

J. Winer & Co., Limited, with headquarters at Hamilton, and a capital stock of $100,000, have been incorporated by the Ontario Government. They will carry on the wholesale drug business, established in Hamilton by J. Winer & Co., and will manufacture medicinal preparations. Among the provisional directors are: George Rutherford, J. Montagu Williams, etc.

The Mohawk Natural Gas Company has received an Ontario charter. Its head office will be at Brantford, capital stock, $150,000, and provisional directors Henry and E. Lister Cockshutt, and others. It will produce and distribute electricity and natural gas for light, heat and power purposes, and refine and sell petroleum oil.

F. W. and Charles W. Doty, and others, have received a charter from the Ontario Government empowering them, with a share capital of $40,000, to make engines, boilers, and machinery, and to build vessels. Goderich will be the headquarters.

Latest failures in the province of Quebec are noted as follows: Narcisse Leclerc, for many years a farmer at French Village, who began storekeeping in 1901, is reported as seeking a compromise arrangement of 40 per cent. on liabilities of about $3,000.——Another man with a brief business record is J. A. Lafrance, of Grande Mere, who only began business in groceries, etc., in the spring of 1903, and who has already assigned. He is estimated to owe about $2,000.——L. E. Desilets, dealing in dry goods, etc., at Shawinigan Falls, and recently reported as offering 30 cents on the dollar, has been unable to complete the arrangement, and the assets are to be sold.——In the matter of H. Mercier, general dealer, Upton, lately reported as an insolvent and absentee, an offer of 60 cents on the dollar is being made by his father-in-law for claims against the estate, which creditors generally are disposed to accept as the best settlement under the circumstances.——An assignment has now been made by J. H. Sherrien, general merchant, St. Gregoire, who was reported a few weeks ago as compromising at 50 cents on liabilities of about $4,000.——O. Lemaire, a carriage maker in quite a fair way of business, at St. Zephirin, has failed owing, it is said, from $10,000 to $11,000, while his assets are of a very slim character. There is an evident disposition on the part of leading creditors to sift matters closely, as he is apparently unable to satisfactorily explain the great deficiency shown.——Alfred Begin, of St. Charles de Bellechasse, with some years' experience as a clerk, started storekeeping in a small way a year ago this month. His habits have been subject to some criticism, and he has already failed.——An extension is being asked by F. J. Morin, who has been in the general store business at Montmagny since 1885. In 1901 he was reported to have compromised liabilities of $6,000 at 50 cents.——J. A. Levesque, in a small lumbering way at St. Gabriel de Rimouski, has assigned, as also has Alfred Dompierre, a baker of Hull.——Ulric Matte has been in the general store business at St. Raymond for ten years. In 1899 he was burned out with some loss, and has apparently been more or less hampered ever since. His assignment is now reported.

Mercantile Summary.

A company has been formed in Cornwallis, N.S., which promises to make use of the water power in Gaspereaux river, and furnish electricity for lighting in Halifax and the Annapolis Valley.

Strikes are still being made in the new oil fields west of Petrolia, Ont. Two flowing wells were recently struck in Moore Township, and it is expected that in the near future, production in this locality will be very much increased.

The Victoria Acetylene Manufacturing Company, capital $25,000, has been incorporated under New Brunswick laws. Jas. H. Whitman, of Port Dufferin, N.S., and A. B. Edgecombe, of Fredericton, N.B., are among those interested.

At the Britannia mine property, in the Howe Sound Valley, B.C., a good deal of development work has been quietly going on for some time past. Construction is well under way on the aerial gravity ore tram, connecting the workings at Jane Basin with tidewater at Britannia Beach, three or four miles away, while work is being rushed all along the line.

The contract for putting up a new public library at Ottawa, the National Museum, has been let to Mr. W. H. McGillivray, of that city, the estimated cost being $50,000, besides some $25,000 more for equipment, etc. The Government's present museum collections and the national archives will be removed to this building, so soon as completed.

The first two large typo locomotives turned out at the works of the Locomotive and Machine Company, at Longue Pointe, (Montreal), have just been completed for the Grand Trunk Railway. The railway had their own engineers superintending the entire construction of the engines. The locomotives previously constructed were small ones for use for light traffic.

On Wednesday last there was a serious explosion at the works of the Toronto Bolt and Forging Company, at Sunnyside. The boiler, which was an auxiliary used to reinforce the plant during steel rolling, was less than two years old, and had been inspected only two months previously. The explanation given of the disaster was that the crown sheet at the back of the boiler had given way, allowing the water to drop down on the fire. The loss, we understand, will be, comparatively speaking, small, not more than about $1,500. Several employees were seriously injured.

Arrangements have at length been made for financing the proposed Nicola, Kamloops and Similkameen Railway. The company has a charter to build a line from Spence's Bridge, on the main line of the C.P.R., to Nicola, and from thence through the Similkameen Valley to Osoyoos, on the southern boundary. Surveys, under the charge of Charles H. Keefer, C.E., are now about completed. The first part of the line, that which will be constructed as soon as possible after a beginning is made, will be from Spence's Bridge to Nicola, a distance of 45 miles. This will open up the large deposits of coal in that neighborhood, and as the road will extend as far as Quilchena, the extensive and valuable measures of the Diamond Vale Coal and Iron Company will also be afforded transportation facilities.

Mercantile Summary.

The St. Louis Fair has not shown a satisfactory record of attendance, but it is pleasing to record that on St. Louis day, a week ago, the record of admissions was the largest yet. Business generally was suspended in St. Louis. The streets were deserted. The citizens, practically en masse, attended the Exposition. The opening event was the parade, in which, if the despatch tells the truth, 50,000 regulars, National Guardsmen and uniformed civilian societies, participated.

◆

BANKRUPT'S LIVING EXPENSES.

Mr. E. Hough, the Inspector-General in bankruptcy cases in the United Kingdom, in his annual report to the Board of Trade, makes a few caustic remarks on some present-day commercial methods. One prominent feature of bankruptcies at the present time, he says, is the excessive amount of drawings for personal and household expenses. Little regard is paid to the question of profits or losses; the debtor seems to feel himself entitled to live handsomely on his business just so long as it can be kept going. The inspector quotes some glaring examples of this form of dishonesty. For instance, a firm of bill brokers, who since 1891 had incurred losses by bad debts to the extent of £16,000, overdrew their profits during the same period by £15,758; a leather merchant and boot factor who, during the three years preceding his failure, lost £21,000 on trading and in bad debts, drew more than £2,000 a year for household and personal expenses; a textile merchant, who in fourteen years made £7,489 net profit, withdrew £18,921; a firm of timber merchants (two partners), who made profits of £29,103 in fifteen years, withdrew £54,021; two Austrian Jews who commenced business as rubber merchants in 1894, without capital, drew from the business in nine years £28,000; they then failed, and creditors for £97,000 found that the assests to meet their claims were only worth about £7,000. This kind of "necessary living expenses" ought to be dealt with under some adaptation of the criminal code.

◆

CANNED WHITE MAN.

Burton Holmes, the lecturer, says that the Indians of Alaska regard white men and canned goods as so closely associated that they are nearly synonymous. Whereever the white man is seen, canned meats, fruits and vegetables are found.

When Mr. Holmes visited Alaska recently he carried with him a phonograph, and it was exhibited to an old chief who had never seen a talking machine before. When the machine was started and the sound of a human voice came from the trumpet, the Indian was much interested. He listened gravely for a time, then approached and peered into the trumpet.

When the machine finished its cylinder and stopped, the Indian pointed at it, smiled, and remarked:

"Huh! Him canned white man."—Saturday Evening Post.

REGULATIONS AGAINST DUMPING.

The regulations with regard to the new anti-dumping tariff, and the German surtax are clearly set forth in a circular which has been distributed by the Department of Customs. They provide that on and after the 1st prox. invoices in duplicate properly certified shall be delivered at the customs house with the bills of entry for all imported goods. Every invoice shall contain a sufficient and correct description of the goods, and in respect of goods sold by the exporter shall show in one column the actual price at which the articles have been sold to the importer, and in a separate column the fair market value of each article as sold for home consumption in the country of export. The "price" and "value" of the goods in every case are to be stated as in condition or packed ready for shipment. The certificate of value must be signed by the exporter, or an employee of his having a knowledge of the facts certified to. Among other things it must declare that the invoice exhibits the fair market value of the goods at the time and place of their direct exportation to Canada; that no different invoice of the goods mentioned in the invoice has been or will be furnished to anyone; and that no arrangement or understanding affecting the purchase price of the said goods has been or will be made or entered into.

CANADIAN
WEST INDIA
STEAMERS

Sail from Halifax for Bermuda, The Windward Islands and Demerara every other Monday, and for Jamaica once a month.

The demand for Canadian goods in West India markets is constantly growing, and prospective exporters shuold inquire as to freight rates by this line.

Sale of Debentures.

Tenders wanted for the purchase of $42,000 Debentures at 4% of the Brandon School District No. 129, as per by-law passed by the ratepayers of said city, and approved by the Department of Education. Same repayable in twenty years.

All tenders to be in the hands of the undersigned on or before 1st October, 1904.

Wm. WALKER,
Secretary-Treasurer.

Box 549, Brandon, Man.

"T. I. P." POINTERS, TO INSURANCE AGENTS AND OTHERS.

An agent's time is not his own. His family, his company and his fellow agents, jealous of their reputation, entrust him to use it to the best advantage. Any misuse of it is a breach of trust.

If you haven't anything good to say of a rival company or agent, don't say it.

The lung capacity and the tongue capacity of some agents is greater than their heart capacity. They are strong on talking about their work, but weak on doing it.

A spotless character isn't the only essential for a solicitor's success. A spotless coat is a good thing, too.

By the way, are you a member of one of those pass-the-hat assessment concerns? Is your policy an order to collect the proceeds from "the brethren" or to collect from a regular insurance company? Which do you think the surer for your widow?

September is the beginning of the harvest period. The maturing of an endowment policy is the harvest season of a man's life. Got anything coming to you?

The newspaper accounts of a fire usually state the amount of insurance carried. What if deaths were reported in the same manner? How would your obituary read?

If time is money, then the longer a man lives the richer he should become. Statistics, however, do not support this. Get an endowment policy and be certain of comfort in your old age.

◆

PARLIAMENTARY VS. CONGRESSIONAL.

The Punkville Debating Society was in regular session, and Mr. G. Watkins Spurling was making an earnest plea on the affirmative side of the question: "Resolved, That man's every act is the result of a selfish motive."

"I go further than that, Mr. President," he said. "About three-fourths of the things a man does is because he's envious of what somebody else does. The pin-headed speaker that had the floor last on the other side lied like a pirate when he said ——"

Here the president of the society rapped on the desk.

"The gentleman must not use such language as that," he said.

"Why not?"

"Because it isn't parliamentary."

"It may not be parliamentary, Mr. President," vociferated Mr. G. Watkins Spurling loosening his collar and rolling up his sleeves, "but, by gum, it's congressional!"—Chicago Tribune.

◆

AN ELECTRIC PLANT.

As an instance of the fact that some of our Canadian manufacturers are awakening to the possibilities and advantages of electrical power for industrial establishments, the Canadian Electrical News refers at length to the new and extensive works and power house, at London, of the McClary Manufacturing Co., situate on the north bank of the Thames, at the corner of Adelaide and Trafalgar streets in that city, a mile east of the old works. As almost everyone in Western Ontario knows, the McClary Manufacturing Company have been established in London, Ont., for over twenty-five years in the manufacture of stoves, furnaces, enamelled iron household utensils, tinware, etc. The old works were large, but the growing business demanded more room. So new

works for a certain department of the business were resolved upon last year. They are devoted exclusively to the manufacture of stoves and furnaces, and have a capacity of 50,000 stoves per annum. The buildings consist of a moulding shop, a stove mounting shop, a storage warehouse and an independent power house. The main object in their arrangement has been to expedite and simplify the sequence of processes of making stoves and furnaces, and the equipment has been so arranged that the material in process is received at one end and shipped from the other end of the works, thus saving repeated handling. The electric motors and gearing are distributed to facilitate this. In the power house are three Scotch boilers and a tandem engine made by Leonard. The new premises are extensive and well calculated to serve the purposes of the company. The illustrations of the Electrical News serve greatly to elucidate the letterpress description of them.

◆

TORONTO MARKETS.

Toronto, Sept. 22nd, 1904.

Chemicals, Drugs, Etc.—The volume of business being done in local drug circles can hardly be described as large, but it is about meeting the expectations of the trade for this time of the year. Prices keep quite steady. A somewhat larger volume of trade is passing in quinine. Opium is on the quiet side.

Flour and Grain.—Ninety per cent. patents sell usually now at $4.40 to $4.50, extra good brands a little more. Manitoba flour is firm. No particular change has occurred in bran or shorts. Offerings of Ontario wheat are still small, and it is very firm. Barley is firm. Some enquiry is being made for corn. Peas are unchanged at steady prices.

Fruits and Vegetables.—The demand for fruit continues brisk in spite of very heavy receipts. Peaches have sold at high prices during the week, but some of those offered are poor quality, and these drag. Prices may be quoted about as follows: Lawton berries, 7 to 7½c.; huckleberries, basket, 90c. to $1.10; peaches, white flesh, basket, 40 to 50c.; peaches, yellow, 50 to 75c.; Peaches, Crawfords, 75c. to $1.25; apples, basket, 15 to 25c.; apples, barrel, $1.50 to $2; pears, 25 to 30c.; pears, open baskets, 50 to 60c.; plums, 50 to 85c.; Canadian cantaloupes, 35 to 50c.; grapes, Moore's early, 30 to 60c.; grapes, champions, 20 to 40c.; grapes, wardens, 30 to 60c. Foreign fruits: Oranges, California Valencias, $4.50 to $4.60; oranges, Jamaicas, barrels, $6; lemons, Messinas, $3 to $3.50; lemons, Verdillis, $4; lemons, St. Nicholas, $4; bananas, 1sts, bunch, $1.25 to $1.75; bananas, 8's, bunch, $1.10 to $1.25; bananas, red, $1.50 to $2.25; watermelons, each, 20 to 25c.; Delaware peaches, one-half bushel, $2; California plums, $1.25 to $2; California pears, $2.50 to $3; California peaches, $1.25 to $1.50; Tokay grapes, $1.50 to $2.50; tomatoes, 20 to 30c.; cucumbers, basket, 10 to 15c.; beans, basket, 20 to 25c.; green peppers, basket, 25 to

Extracts from Report of the Directors for the Year Ending 31st December, 1903.

The Premiums received during the year, less Re-insurances, amount to $7,105,935, an increase of $27,725.

The Expenses and Losses (paid and outstanding) amount to $6,123,130, a decrease of $488,795,

The result of the year's working, including Interest, provision for Unexpired Risks, and Balance brought forward from the last Account, and allowing for Interim Dividend, leaves a Balance at the Credit of Profit and Loss of $1,412,335, out of which the Directors propose to declare a final Dividend of $5.75 per share, to be paid on the 30th April.. This, with the Interim Dividend of $3 per share paid the 31st October last makes the total of $8.75 per share for the year.

SWEET CAPORAL

CIGARETTES

STANDARD OF THE WORLD

SOLD BY ALL LEADING WHOLESALE HOUSES.

30c.; red peppers, 75 to 80c.; egg plant, basket, 35 to 40c.; Can. green corn, doz., 9 to 11c.; Canadian celery, doz., 40 to 60c.; sweet potatoes, $3 to $3.50; Spanish onions, case, $3; Spanish onions, small case, $1.

Groceries.—No changes have occurred in sugars, though the movement continues pretty fair considering that not so much is being required for preserving purposes. In general lines, trade is only fair, and it is without feature. Some enquiry is being made for dried fruits, and currants are quite firm. Canned goods, both fruits and vegetables, continue strong.

Hides and Skins.—Offerings of hides are up to normal, but there is a weakness in the C[illegible]go market which to some extent is reflected here, and prices are a little easier. For lambskins 65c. is the prevailing price. Receipts are fair. Calfskins are steady. Tallow is now a little firmer. For leather the prospects are said to be improving.

Provisions.—Choice qualities of both creamery and dairy are in good demand, but for other grades the market is weak. Cheese is holding up fairly well. Not many eggs are coming forward, and prices are good. Receipts of poultry are lighter, and prices keep steady. The tone of the market for hog products keeps quite firm.

Live Stock.—The run of cattle at the market this week was quite heavy, but the demand was slow, and many animals went eventually at lower prices. Choice export cattle were the only ones wanted. Usual range of quotations, both for exporters and butchers', was about 25c. per cwt. lower. For good feeders and stockers the demand was fair. For calves, of which there were a good run, the enquiry was brisk. Export sheep were firm, while lambs were easy.

Wool.—Very little fleece wool is in the market, and the export enquiry is nil. For pulled, the demand is good from the home mills.

◆

MONTREAL MARKETS.

Montreal, Sept. 21st, 1904.

Ashes.—For the first time in many moons, an offering of pearls has been made in this market, a lot of five barrels having just come to hand, for which the maker asks $7.90. Pots are in fair request, and as receipts are small, makers could probably realize $5.75 to $5.85 for firsts, figures somewhat higher than a fortnight ago.

Dairy Products.—Cheese shipments to Great Britain continue to show a pretty steady falling behind in volume, as compared with the business of last year, the figures for last week being 76,081 boxes, as against 106,371 boxes for the corresponding week a year ago, and the total shortage to date aggregates about 405,000 boxes. On the other hand the exports of butter show a moderate degree of increase. The statistics for last week show shipments of 28,110 packages, as against 19,383 for same week of 1903, and the total gain for the season thus far is just about 116,000 packages. In this line the week has witnessed a strengthening in value of nearly a cent a pound, the present quotation for finest creamery being about 20¼c., with ordinary grades ranging down to 18½c. Cheese remains about steady at last week's prices, finest Westerns being quoted at about 9¼c.; fine Townships at 9 to 9⅛c., and Quebecs at 8¾ to 9c.

Dry Goods. — The premature cool weather has apparently been helpful to sorting business in fall lines to some degree, but not to any very marked extent, and the volume of wholesale business is just moderate for the season. Collections are generally reported as fair. A new list of the Canadian Colored Cotton Co., covering their output of fine ginghams, has just been issued, and shows that prices for the spring of 1905 are just about the same as before.

Flour.—The market is very steady at the recent rise, with a very fair volume of business passing. Quotations are as follows: Fine patents, $5.70 to $5.80; straight rollers, $5.40 to $5.50; strong bakers', $5.50.

Groceries.—The movement is not marked by any briskness as yet, and collections are described as about fair. California raisins are firmer, as the Seeders' and Growers' Associations are reported to have got together, and higher prices are naturally looked for. Prices of Malaga fruit by direct steamer are cabled at 5s. 6d. for London layers; Connoisseur clusters, 8s.; Royal Buckinghams, 11s. 9d.; Imperial Russian, 14s. From Smyrna, Sultana raisins are cabled as easier. Good demand is reported for Comadre figs. First reports of great shortness in the crop of French walnuts are somewhat modified. The "Jacona," the second direct Mediterranean steamer, has been delayed in her sailing from Patras, and is now timed to leave on the 25th inst.. The "Escalona," the first fruit steamer, is also delayed at Denia, her last port of call, orders for Valencia raisins from this side apparently not coming in very freely. The sugar market is virtually unaltered, though some cutting was reported in yellows in New York a few days ago, and local refiners still quote $4.65 for standard granulated. Trading in teas continues of a limited character. Rains in India are said to be delaying the crop, and the manufacture of Ceylon greens is still suspended, owing to the low prices.

DELAYS ARE DANGEROUS.

are by far the BEST, CHEAPEST and MOST COMPREHENSIVE in the market.
Full Information Freely Given.
A. C. C. DINNICK, Managing Directo.

Hides.—No recent change of any kind is noted. Beef hides are moving out fairly, there being no accumulation of stock in warehouse, and prices are steady at 9½c. for No. 1, dealers buying at 9c. Lambskins are steady at 70c. each.

Metals and Hardware.—Dealers in heavy metals report a little more activity, and the cool spell has induced a fair demand for heating apparatus supplies, but in general hardware there is no briskness to the demand, and orders in all lines are such as indicate considerable carefulness in buying. Copper and lead show some tendency to advance, 13¾ to 14c. being now quoted for the former in an ordinary way, and $3.25 to $3.35 per cwt. for latter; ingot tin is firm at 30½ to 31c.; spelter, $5.75 to $6; antimony, 7 to 7¼c.; sheet zinc, $6.25. Canada plates are rather more firmly held, $2.25 to $2.30 being quoted generally in a jobbing way, though offers have been made in round lots at $2.17½; black sheets, $2.20 to $2.25 for 28 gauge; galvanized sheets, Gorbals, $4.15; Queen's head, $4.30; Ternes, $6.25; coke tins, $3.65 for cokes, and $3.90 for charcoals of standard brand and weight. Boiler plate, $2; iron pipe easier at $4.30 for inch, or lower for round lots. Pig iron and bars are unchanged.

Oils, Paints and Glass.—The trade are beginning to appreciate the position with regard to the probable shortage in glass supplies, owing to the labor situation in Belgium, as referred to by us some weeks ago, and there is a general firming up in quotations, which are at present as follows: $3 per 100 feet for first break; $3.20 for second break, and $3.70 for third break. Turpentine is again a cent easier, at 81½c. per gallon for single barrels. Linseed oil, leads, putty, etc., remain as before.

Head Offices—Queen City Chambers, Toronto
SCOTT & WALMSLEY,
ESTABLISHED 1858.
Managers and Underwriters.

—The Ontario Wind Engine and Pump Company's foreign trade is increasing rapidly. They are now preparing for shipment to the Levant ten complete Canadian Airmotors, fitted with special drainage pumps. They are also preparing for shipment to Madras, India, a Canadian Airmotor for supplying two houses with water. Shipments are also being made constantly to England. It is gratifying thus to find Canadian goods establishing for themselves such a good name in distant parts of the globe.

—Canadian manufacturers and exporters are reminded that, by the new South African customs regulations, they are placed at a decided advantage over those of other countries. Several goods are on the free list, and with regard to others, it is provided that a rebate of customs duties shall be granted on any goods and articles the growth, produce or manufacture of Canada, imported therefrom into that colony for consumption therein to the extent following: In the case of goods and articles liable to customs duty under class I., II., or V., of schedule B, a rebate of 25 per cent. of any duty chargeable thereon at an ad valorem rate, but of no other duty; and, in the case of goods and articles liable under class III., of schedule B, to duty at an ad valorem rate of 2½ per cent., a rebate of the whole of such duty.

THE COMMERCIAL
The WEEKLY FINANCIAL, COMMERCIAL & GENERAL TRADE NEWSPAPER of the GREAT WEST.

Reaches direct 90 per cent. of the retail, wholesale and manufacturing trades of Northwestern Ontario, Manitoba, the Territories and British Columbia in advance of, and publishes more interesting commercial and financial news than any other similar newspaper in Canada.

Do you want to sell or increase the sale of your goods in these, The Best Buying Provinces in Canada?

Estimated that 200,000 new settlers will arrive this year. Will the retail merchant offer them your goods?

Our advertisers our best references. We beg the favor of an enquiry.

THE HUGH C. MacLEAN CO., Limited,
Publishers, Winnipeg.

Eastern firms should subscribe for The Commercial and keep posted on Western trade

FINANCES IN THE UNITED STATES

Henry Clews & Co., New York, in their weekly letter say: Compared with the lowest prices of the current year, which occurred in February and March, the leading railroad shares have risen about 15 to 30 points. Of course, these advances have been largely brought about by manipulation and inside support; important movements up or down always are, but the various cliques and leaders in the recent rise could not have been successful without a substantial basis of some kind. Such a basis has been found in the revival of confidence which developed after the drastic liquidation of 1903, in continued easy money, and finally in a satisfactory harvest. The question which now arises is: Will this advance be continued, or has is about reached its culmination? During the past week or ten days the market resumed much of its former activity, transactions running into the neighborhood of a million shares a day. This activity could hardly be attributed to outside buying, for while the public has been operating with rather more freedom than of late, the bulk of buying and selling was for professional account, and unquestionably has strong banking support. The market is consequently still in competent hands, and controlled by the big leaders who have plenty of stocks to sell, and who would probably like to put themselves in good shape to handle some of the important new issues which are known to be in contemplation and which have been held in abeyance since the setback of 1903. If the investment demand proves sufficient to relieve the market of its present surplus of securities all will go well and the upward movement may continue.

There are, however, sufficient elements of doubt in the situation to induce a very cautious policy. The fact that active shares have risen 15 to 30 points is the very strongest possible inducement for selling among those who have been carrying stocks for any length of time. The less active shares have, meanwhile, scored advances of 10 to 20 points, and even the industrials have risen from 5 to 15 points in spite of general neglect. The market, therefore, stands exposed to heavy realizing on every good rise, this risk increasing materially as prices go upwards. The wheat crop has been a disappointment, showing a decrease of about 100,000,000 bushels, and being the smallest since 1897. This is anything but a bull argument; for while the farmer may secure compensation through better prices, the country at large will lose through high-priced bread and a diminution of exports. A corn drop approaching 2,500,000,000 bushels and a cotton crop of 11,500,000 bales, together with better crops of rye, barley, hay and potatoes, will, however, more than make good the deficiency in wheat. Increased exports of cotton should also counterbalance the probable loss in wheat shipments. The money market may easily fall into a condition that will discourage bullish speculation, though there are at present no signs of disturbance in that quarter. Yet an expansion of $30,000,000 in loans in two weeks, when that item is already at record figures, and a decrease of $15,000,000 in surplus reserve in the same period—and that before crop demands have begun in earnest—are facts that should command more attention than they have received. As for the future of the market, its tendency, as already said, still seems upward, in spite of its high level and frequent reactions.

* * *

The Eureka Refrigerator Co. has received an Ontario charter authorizing it to manufacture and sell refrigerators and other appliances for cooling purposes, also butchers' supplies and kitchen utensils. Headquarters are at Toronto.

Last week each of the forty or more employees of H. W. Petrie, the well known machinery man, of Toronto, was pleasantly surprised to receive a bonus, based on the earnings of the year. Mr. Petrie decided to put this plan into operation. Each man's salary is assumed as capital in the business. The bonus to each man was based on his salary, and everyone from manager to office boy received his share. The plan has worked most successfully and is to be continued.

A winding-up order has been issued in the matter of the Huntingdon Mfg., Milling and Power Co., Limited, of Huntingdon, Que., a company which was incorporated in September, 1901, with an authorized capital of $100,000, to acquire an old established milling business and water power, on which a considerable expenditure was made after the purchase.——A meeting is also called for the appointment of a liquidator to the United Mineral Wool and Asbestos Co., of Montreal, under a winding-up order granted last week. The company was only incorporated in March, 1903, with an authorized capital of $20,000.

Agencies in Every Town and City in Canada.

—According to recent advices, the prices received for early crop Canadian apples in Liverpool have ranged from 8s. 6d. to 14s. 9d. per barrel, the general average being about 11s. 6d. per barrel. There is strong competition with the early English crop, which is a good one.

Mrs. A. Guimond, carrying on business at Montreal, in hardware, paints, etc., under the style of A. Guimond & Co., has assigned. Her husband failed previously in December, 1900.——Wm. Angus, carrying on the manufacture of paint cans and general tinware, at Montreal, under the style of the Standard Tinware Co., has assigned, and a demand of assignment has been made upon Mrs. Wm. Angus, doing business under the style of the Auld Mucilage Co.

—Mr. Alexander Finn, British consul in Chicago, in a recent letter to the Superintendent of Commerical Agencies, at Ottawa, points out that his office is always ready to do anything in its power to assist the commerce of any part of the British Empire, but that it is given little information from Canada, and few Canadians ever ask any information from it. On the other hand, it is flooded with enquiries from American firms wishing to send goods into Canada." He suggests too, that the Canadian Department of Trade and Commerce should regard a consulate as one of its agencies, and should make all possible use of its knowledge of the trade and capabilities of the district, and recommends Canadian merchants, manufacturers and others should call at the office when visiting Chicago. In this way they should be kept in touch with all that is going on, and hear what merchants and manufacturers are looking for, and be able to follow up enquiries for a visitor, which otherwise the consul would never have heard of.

30 Days of Grace

for the payment of Renewal Premiums is one of the many privileges the SUN LIFE OF CANADA grants its policy-holders. Should the Assured die at any time within the days of grace the claim would be promptly paid, even though the premium had not been paid.

THE WESTERN CROP.

Our Winnipeg correspondent wires as follows under date yesterday noon: "Generally favorable weather, warm with occasional light showers, prevailed throughout the West during the week just ended. Good progress has been made in threshing, which is now general. Receipts of wheat are becoming heavy, about 180 cars being inspected here daily. The grade is low, but farmers are realizing good prices for it. Threshing returns so far indicate a good yield; different districts report from twelve bushels to thirty-six bushels per acre. Localities where rust was worst are turning out better than expected, averaging around fifteen bushels to the acre."

CANADA AND MR. CHAMBERLAIN.

The truth of the proposition that men usually see just what they would like to see was never illustrated to better advantage than in the arguments presented both for and against Mr. Chamberlain's preferential trade scheme. As one example out of many, we note that in Sir Howard Vincent's eloquent speech before the Toronto Board of Trade last week he made the emphatic statement that in his own constituency of Central Sheffield, largely made up of workingmen, there was scarcely a man who did not wish the new proposals success. Within a very few days of the time when this opinion was expressed, the Trades Union Congress, in session at Leeds, adopted the following resolution by a vote which the dispatch says was almost unanimous:

> "That, in the opinion of this congress, any departure from the principles of free trade would be detrimental to the interests of the working classes, on whom the burdens of protection would press most heavily, and injurious to the prosperity of the nation as a whole; that protective duties, by increasing the cost of the people's necessaries, are unjust in incidence and economically unsound, subsidizing capital at the expense of labor, and that a system of preference or retaliation, by creating cause for disputes with other countries, would be a hindrance to international progress and peace."

Now, while we admit that the average trade union is not altogether so representative as its leaders would sometimes have it appear, yet the meaning of such a resolution as the above is quite clear. Leeds also is not so far distant from Sheffield that there is likely to be such a wide chasm between the desires of their respective workingmen as the two statements quoted would imply. So the inference must be that Sir Howard, who has done so much for the preferential tariff cause was, to a degree, blinded by his enthusiasm. Again, if it be true that British workmen are such a unit in favor of Mr. Chamberlain as some of the dispatches would have us believe, how comes it that so many of the bye-elections which have been fought already, with this great question of tariff reform as the battle-cry have gone distinctly against the reformers.

However, the primary question, so far as we in Canada are concerned, is, not how the working Briton looks upon the matter, nor even what course will be taken by the British Government. Canadians want to help the Mother Country in working out any economic course deemed desirable for her own good and that of the Empire as a political entity, but the primary consideration must ever be the best and quickest development of their own Dominion. And of this the British workingman is no judge whatever.

BANK STATEMENT.

We present below a condensation of the monthly statement of Canadian banks for August, 1904. It is compared with the Bank Statement for the previous month, and shows capital, reserve, assets and liabilities, average holdings of specie and Dominion notes, etc.:

Canadian Bank Statement.

LIABILITIES.	Aug. 1904.	July 1904.
Capital authorized	$100,546,666	$100,546,666
Capital paid up	79,458,433	79,267,773
Reserve Funds	52,320,981	52,318,691
Notes in circulation	$60,227,074	$59,979 830
Dominion and Provincial Government deposits	7,643,012	8,518,003
Public deposits on demand in Canada	119.137.382	118,331,939

Total liabilities	$559,781,428	$556,126,535
ASSETS.		
Specie	$16,286,923	$17 303,333
Dominion notes	34,669,012	32,049,188
Deposits to secure note circulation	3,328,771	3,327,618
Notes and cheques on other banks	16,847,212	17,161,541
Loans to other banks, secured	915,486	817,668
Deposits with other banks in Canada	5,422,266	5,617,022
Due from banks in Great Britain	9,771,971	9,395,427
Due from other banks in foreign countries	21,425,042	19,213,193
Dominion or provincial Govt. debentures or stock	10,880,176	10,865,878
Other securities	53,977,148	53,457,330
Call loans on bonds and stocks in Canada	35,710,410	36,711,597
Call loans elsewhere	42,597,582	34,924,405
	$251,831,999	$240,844,200
Current Loans in Canada	408,240,567	414,096,802
Current Loans elsewhere	17,869,809	19,821,390
Loans to Dominion and Provincial Governments	2,058,737	2,094,659
Overdue debts	2,260,972	2,133,146
Real estate	729,072	758,962
Mortgages on real estate sold	772,065	748,128
Bank premises	9,948,637	9,783,402
Other assets	7,918,306	6,128,566
Total assets	$701,630,340	$696,409,519
Average amount of specie held during the month	16,566,253	16,671,640
Average Dominion notes held during the month	31,648,136	31,076,172
Greatest amount notes in circulation during month	62,142,848	62,160,693
Loans to directors or their firm	10,098,809	10,168,288

There is nothing of especial moment in the figures of the Bank Statement for last month, as compared with July. Next month there may more likely be changes to write about. Circulation is a trifle higher, which is a change from August of last year and year before, when it was lower. Deposits are about $4,000,000 larger in August in Canada, while those elsewhere are about as before. Current loans show a decline both in Canada and the States. The total was $426,110,000 last month, and $433,918,000 in July. This is a slightly different state of things than in either of the previous years. Call loans made in Canada are less, while elsewhere they are nearly eight millions larger. It is not easy to see why this is the case for there is no such profit in the New York or Chicago market as to induce the transfer of this amount of money, nor is there in London. An item that is worth mentioning is that a slight increase is shown in overdue debts in the month. In 1903 and in 1902 there was a decline. If this increase were general instead of particular, it would not be a healthy sign. At any rate the amount overdue is not large, being only about one-half of one per cent. on the whole amount loaned.

ABSTRACT OF BANK RETURNS.

THE TEXTILE STAPLES.

A good deal of uncertainty still prevails in the market for cotton goods. The schedule of prices for staples issued two or three weeks ago and announcing a general 10 per cent. reduction has not been followed by further declines as was anticipated, and in the interim the feeling respecting raw material has become more bullish. It is recognized and admitted that the acreage under cotton is materially larger than last year, but at the same time it is pointed out that several conditions interfere to prevent this fact implying a sufficiently large yield to affect values very adversely. For example, not all the crop has been gathered in yet, and frost may yet have opportunity to do injury. Even in the portion of the crop already harvested rust and worms have in many sections caused a calculable percentage of mischief. On top of these factors comes the belief that the demand will be more than usually large, owing to the extent to which boom prices a year ago restricted consumption. There has been a good deal of holding-off in the matter of purchases of the staple for manufacturing purposes, both on this continent and in Europe, but this state of things cannot last for ever.

The high prices asked by the holders of Canadian wool have at last come to such a point that we hear of cases where wool has been imported into this country from Great Britain. There can be no doubt that prices here have been held up at more than a par compared with the world's markets, and this even without disputing the fact that values are at a high point everywhere. A dispatch from London on Tuesday, referring to the auction sales, stated that coarse cross-bred wools sold readily at unchanged prices, and that the market continued strong. Boston and other American advices tell of increasing firmness there. But there is no demand just now for Canadian wool for export, and, as intimated above, the chance for such is largely discounted while holders retain their present views. The domestic mills, at any rate those that make blankets, are actively employed, while the prices of tweeds and some other clothing materials are quite strong, with an advancing tendency. Reports from travelling salesmen in some of the country districts speak not very buoyantly in a few cases of stocks of woolen goods held over in part from last winter, the unusually bad roads at that season having hindered consumption and interfered with the turnover. Prospects are, on the whole, however, fairly good for the next few months.

COMMERCIAL TRAVELLERS' ASSOCIATION.

This Association, now numbering some 6,400 members, was founded in 1871 mainly for the purpose of furnishing the members special transportation privileges in Canada. During all these years it has been the means of saving hundreds of thousands of dollars to merchants, securing protection to the railway companies, and being of material benefit to commercial travellers. After the Association had been in operation for a few years it was found that the management had been so excellent and careful that the funds of the Association were accumulating. The question as to how these funds should be applied became a live one with the directors. Finally, it was determined to provide with them and with the available balance of future subscription fees benefits to become payable upon the death of the members. This decision was a wise one, for it relieved the merchant from obligation to provide for the family of deceased travellers, and at the same time secured to the traveller's family at his decease a fund independent of his employer. The annual subscription fee of $10 has been invariably paid by the merchant; while the merchant pays the fee, the benefit to him is in the reduced transportation charges for his travelling salesmen, and the doing away with the necessity of giving a bonus, etc., to the family on the death of the employee.

At the last annual meeting of the Association it was pointed out that the balance of the subscription fee for mortuary benefit purposes was $8 per member. In the past, great iniquities and injustices had been done to existing members by paying a full mortuary benefit of $1,200, and later $1,000, to the families of those who had died. It is self-evident that a uniform fee of $8 per annum per member cannot possibly secure any such benefit to a group of men ranging in age from 18 to over 70. At that meeting the Board of directors brought in a by-law having for its object the placing of the Association's mortuary benefit upon a sound and permanent basis, but it is regrettable to record that it failed to carry by a very narrow margin. Remarkable to say, the Association throughout the whole of its past history never had a valuation of its liabilities made until the close of last year. When it is recalled that at the close of 1903 its outstanding obligations amounted to $5.773,000, and that its accumulated funds to but $406,000, it will be seen that it is quite time the directors should take steps to put their affairs in shape. An assessment scheme has been proposed by some to meet the deficiency disclosed by the valuation just mentioned. We have no hesitation whatever in saying that such a plan is impracticable, and that it will ultimately end in disaster, and we trust will not be countenanced by the Board. There are numerous instances of this kind of thing in Canada, the most notable and most recent being the assessment scheme of the Mutual Reserve.

During the past months readers of the daily papers have noticed the many agitations of fraternal and assessment societies to increase their rates and multiply their assessments, simply because the foundational structure of the scheme upon which these assessment societies have been working is unsound and faulty. There is, perhaps, no body with whom the assessment system would prove so unsatisfactory as that of commercial travellers. They are constantly moving about, and notices of assessments would only reach them irregularly. Of course, if assessments were not paid promptly the members' mortuary benefits would have to be cancelled. Would failure to pay assessments also cancel the members' connection with the Association, including transportation privileges? What would our merchants who are paying the subscription fee say as to this?

We are strongly of the opinion that the members of the Commercial Travellers' Association will be advancing their best interests by adopting some such scheme as was proposed by President Ellis at their last annual meeting, and which, after careful deliberation and much thought, was adopted by the board of directors and embodied in the by-laws referred to.

The Commercial Travellers' Association represents an intelligent body of men—men who associate and trade with those who do business on sound, safe and conservative lines, and we would therefore expect that in a matter which is of such vital importance to them and their families they will see to it that the affairs of their Association are placed upon such an absolutely safe and sure basis that there will be no question about their mortuary benefit scheme standing the test of all time and being thoroughly sufficient and adequate to pay the last claim that may be made upon it. This can, and should, be done.

MUNICIPAL FIRE INSURANCE.

Under the pressure of parsimony, or fear, or perhaps of resentment at the raising of insurance rates, there is apparent in various communities in Canada of late a disposition to favor municipal insurance. Which is to say, that any village, town, or city, even a county or a State, may with economy do its own fire insurance and pay its own losses. At first thought this scheme is an attractive one. The argument in its favor usually runs thus: "This town or city has paid out, in twelve years, sixty thousand dollars for the insuring of property against fire. In all that time the fire losses have only amounted to forty-eight thousand. Therefore we have expended $12,000 in buying indemnity from insurance companies which we need not have done if we had been our own insurers." Many people are so captivated by this short-sighted argument that they do not stop to consider further, but are carried away in favor of municipal fire insurance.

It may be that a municipality, small or great, will for a long time escape serious loss by fires. And this not unnaturally leads its residents to believe that they have some sort of patent which secures them safety. But the law of average reasserts itself. Fires *will* come— we can never tell when, and the meagre fund which a single municipality has laid by against possible isolated fires is swept away, and property worth ten times as much besides, by a conflagration, a forest fire, or by an ordinary fire with which in a gale of wind, or on a cold night, or in very dry weather, their fire brigade cannot cope. Then, when the ashes of the town hall and the bare walls of destroyed stores meet the eyes of householders or merchants who had trusted to municipal insurance, they are likely to say to themselves: "Oh, if I had only $10,000 insurance in a good English company, or even in a home mutual company, I could have gone to the city instantly for more goods. But, as it is, what have I left after all my years of hard work?"

Instances of the result of State or municipal fire insurance are numerous. In the Aalesund conflagration in Sweden, months ago, the loss was $1,600,000 or more. The Swedish Government was its own insurer. If this huge loss had fallen upon European insurance companies they would have paid it at once out of reserves consisting of insurance premiums collected from all over the world. But the Swedish Government institution had only one or two hundred thousand dollars on hand, and the Government had to raise some £300,000 sterling by loan to pay the loss. Again, take the case of the State of Wisconsin. For many years its authorities had insured the State capitol against fire for $600,000 in various good companies. But the latest Legislature thought they could do better by having the State insure the handsome building, and so they let the policies lapse: some $510,000 of them lapsed in June, 1903, and $90,000 in December. Early in the present year the capitol took fire and was almost destroyed; the loss was $800,000. All that the State has put aside against this was an insurance fund of $6,000, *six thousand dollars*. The State, therefore, loses $594,000 which it might have had if the policies for six hundred thousand had been maintained in the sound insurance companies. But they chose to experiment with State or municipal insurance, and we see the result. Another instance occurred last month in one of the districts of London, England, which is giving the municipality (which lost $150,000) much searching of heart on the subject of self-insurance.

A COMING "QUEEN CITY."

Regina, the capital of the North-West Territories, is now very busy evolving itself. The city is fast losing that sprawling, all-over-the-place look, as if trying to "spread itself." Somebody once described Regina, formerly named Pile o' Bones, as a mushroom kind of village that was giving itself airs. The swagger air complained of was imparted by the presence of so many Government officials in the place, and by the gallant boys in red of the North-West Mounted Police, whose jingling spurs, as they "do the town," were mildly intoxicating.

The early dreams of the city promoters are now being realized, and one can find every justification for the presence in its midst of quite a strong metropolitan feeling. Regina has fine public buildings, but they again, like the Lieut.-Governor's residence, the police barracks, etc., are away out on the limits of the place, and these boundaries are wide. The traveller, who has to visit the post office of Regina, growls because the blankity-blank building is away out in the country, and if the weather happens to be rainy, great is the power of Regina mud, he can slip and slide right up to Sir William Mulock's deputy portals.

Great schemes are afoot just now. A water and a sewerage system are being installed at a cost of nearly $200,000. The city owns its own electric plant. A new power house is being erected. The value of new buildings that have gone up this year is no less than $311,730. The population, which four years ago was only 2,500, has grown until it is today about 7,000, and here we can see, as Mr. Dooley puts it, "expansion expand." And notwithstanding the rapid growth of the place, in very many things, it is lacking in some. There is opportunity here for enterprising men who would start a confectionery and candy business, a wholesale grocery, a cold storage place, and an up-to-date pork-packing establishment. There is an extensive and fine country, tributary to the town, with an abundance of coarse feed growing that could be turned into fine pork. And right here you have a rapidly developing home market, close at hand. Any of the enterprises named should pay from the start; assistance will, I am told, be forthcoming to capitalists who are prepared to make a venture.

All the leading agricultural implement manufacturers are represented here, not in an ordinary way with a small office, but they have erected large warehouses with big staffs. Commercial travellers are now in Regina in great numbers, making it their headquarters because it is central and convenient. With the opening this fall of the Arcola extension of the C.P.R. and next year the Canadian Northern Railway coming in will give needed competition to the city on freight rates. The Union Bank is putting up substantial buildings; the Bank of Hamilton has a fine block recently occupied that would be a credit to any city. The banking business of the district is well looked after by five chartered banks. Regina has three newspapers; one of them has recently branched out into the daily field, another evidence of enterprise. There is good reason to believe that Regina will be a considerable city, indeed, what may fairly be implied in its name, a "Queen City" of the Canadian North-West.

Regina, Assiniboia, 26th Sept. RAMBLER.

—The discovery of oil in paying quantities is reported from the eastern end of Manitoulin Island, and Mr. W. P. Bullard, of Chicago, has, we are told, formed a company to develop the fields. Five thousand acres of land have already been taken on a two-years' lease. Four wells have been bored, and oil discovered in good quantities at a depth of 400 feet. The company purposes to build its own nitro-glycerine factory on the island, explosives being difficult to obtain.

—The Soo industries have resumed activity in earnest. The steel plant has been turning out 500 to 600 tons of steel rails daily, and these are said to have come up to the test in a highly satisfactory manner. The two furnaces are turning out 400 tons of pig iron daily, and this quantity will be increased to 500 tons shortly. The mechanical pulp mill also is in operation, but the sulphite mill will not be worked till more wood can be brought out.

OUR ST. JOHN LETTER.

Some of the leading wholesale grocers of the province have secured incorporation of a company known as the New Brunswick Importing Company, with a capital stock of $25,000. The prime object of the combine is said to be to engage in the importation of molasses from the West Indies, for the dealers themselves. Heretofore practically all the molasses sold here has been imported by two concerns, Baird & Peters, and R. G. Crosby. The merchants in the new company are said to have become convinced that they can secure their supply of molasses more conveniently and perhaps more economically than at present. It is understood they do not intend going into the business with any idea of competing for trade, but will import only for their own demand.

A considerable amount of New Brunswick money was lost by the failure of the International Mercantile Agency. It is figured that Sackville capitalists alone lost between $30,000 and $40,000, and that as much more was dropped by Moncton parties. St. John men who were in the company are said to have got out in time.

The suspension was announced a few days ago of the big house of C. Flood & Sons, St. John, carrying on the largest fancy goods trade in the Maritime Provinces. As yet, no statement of the firm's affairs has been made, but it is generally understood that their liabilities will be heavy. Everybody hopes they will be able to so arrange that they can continue the business.

New Brunswick stockholders have secured a controlling interest in the McAdamite Metal Company, of New York, and have appointed E. G. Evans, C.E., lately manager of the Central Railway, to manage the factory at Staten Island. Mr. Evans spent six weeks investigating the metal and the company's position, and his acceptance of the office is thought to indicate that initial difficulties have been overcome, and that better days for the concern are ahead. The local owners are confident they have a metal that will largely take the place of copper and brass, and to some extent supersede steel.

The Maritime Auer Light Company, a local syndicate controlling the Auer light on this market, has gone into liquidation, and the business is offered for sale.

While digging a well on his farm, at Notre Dame, Kent County, a few days ago, Wilfrid Cormier uncovered a seam of coal that is now being explored, and will, it is thought, lead to some mining operations in that section.

J. R. Ayer, of Middle Sackville, has a force of fifteen or twenty men at work picking and canning mushrooms. His factory is said to be the only one of the kind in the Dominion, in fact on the continent. The mushrooms grow in abundance on the marshes near Sackville, and Mr. Ayer puts some of them up whole and some as catsup.

The Premier of New Brunswick, Hon. L. J. Tweedie, left a few days ago for British Columbia. He is interested in a gold mine on Princess Royal Island, and his son is manager of the business out there. It is understood that Attorney-General Pugsley, who is president of the mine company, while in England recently, secured a promise from English capitalists that they would send an expert out to look over the property, and if the report is satisfactory, will invest in it.

Plans and preparations are now being made for the coming winter's trade through St. John. The trouble of last winter is already looming big on the horizon, and the city fathers are face to face with the question of how to provide berth accommodation for all the boats that want to come. The Allan Line will probably be compelled, as last winter, to send some of their steamers to Halifax. All the other lines of last winter will be here, and it is likely that some of them will try and improve on the services given.

There is nowadays much political talk, and New Brunswick is chiefly interested in the moving that it is alleged is being made by David Russell, of Montreal, to secure the nomination of Hon. Wm. Pugsley as one of the St. John candidates for Ottawa. Mr. Russell is the owner of The Telegraph newspaper, and to-day it is announced that he has bought The Gazette, an evening paper that he will call the Times. It is believed that both these will boom Mr. Pugsley, to whom Mr. Russell is to give a big banquet at the Caledonia Springs Hotel on October 6th, furnishing free trains and dining-cars, with free accommodation at the hotel to the hundred or more he is inviting from St. John. People here want to know what it all means?

St. John, N.B., 27th Sept. * * *

DEATH OF HON. JOHN F. STAIRS.

A prominent and valuable man passed away on Sunday night last in the person of Hon. John Fitzwilliam Stairs, of Halifax. Widespread sorrow was caused by the announcement, not only in Halifax, but all over Nova Scotia, for in commercial, religious and political circles of that province, the deceased gentleman was respected and beloved. His death was caused by pneumonia; he had taken cold early in September, while on a journey from Halifax to Toronto, and died in the General Hospital of the latter city.

John F. Stairs was one of the men who should have lived longer. He was only 56, but his life had been an active and a useful one. He had been identified for years with the financial and business interests of Halifax and Nova Scotia. He was connected in various ways with many of the leading business institutions. For years he has been the president of the Nova Scotia Steel Company, president of the Eastern Trust Company, president of the Trinidad Electric Company, and president of the Royal Securities Company.

Entering commercial life as a member of the firm of Wm. Stairs, Son & Morrow, shipping and general merchants, he soon found a place outside of the firm's business for assisting in the development of the various local industries and enterprises. After serving Halifax and Dartmouth municipally, he was returned to the Nova Scotia Legislature as a Conservative in November, 1879, and became a member of the Holmes administration without portfolio and continued to hold the position up to the resignation in 1882. In July of the following year he was elected as a member of the House of Commons for Halifax, and continued to sit until the close of the seventh Parliament in 1896. He was president of Dalhousie College. Whether in politics or any other sphere, Mr. Stairs was always the honorable business man and the courteous gentleman.

A COLOSSAL INDUSTRIAL ENTERPRISE.

The project of "harnessing Niagara," when first broached some years ago, was deemed both absurd and presumptuous. Scientists, those irreverent radicals in the sphere of things material, seemed to orthodox eyes to have reached the limit of arrogance, when they proposed to transform the power of the renowned rapids near the great cataract into electric energy and carry it scores of miles to industrial centres. But this very thing was done by the Niagara Falls Power Company on the United States side of the river, which for several years past has supplied the city of Buffalo and various enterprises at the Falls and within a radius of forty miles with electric power and light derived from the force of that great mass of rushing water.

Canadians are doing a yet more wonderful thing of the same kind and on a larger scale on the Canadian side of Niagara river. Three electrical companies have franchises there, close to one another above the Falls. Our attention will be given in the meantime to one of these, the Electrical Development Company, of Ontario, Limited. It seems an incredible thing that workmen could have been found to risk their lives putting down wooden cribs upon the bottom of Niagara river 500 feet from the shore, in the midst of boiling currents and billows 18 feet deep and rushing toward the brink of the Falls at the rate of thirty miles an hour. But there at this moment are the cribs, there is the coffer-dam, and there is the ancient river bed, with its fissures and masses of eroded rock that look like boulders, never before 1903 exposed to the air and light of day. You look upward and outward from the shore 1,500 feet to see a mass of derricks, timber, detritus, stone, men and steam machinery, collected in a space, fourteen acres in extent, of what was the bed of the Niagara river, covered for countless years with tumbling masses of rapid water fourteen to nineteen feet deep. It was the bed, we say and will be again, for when the power house is completed, this area now exposed to gaze will resume its natural appearance, the present structure being only temporary, or what is called "false work" to enable the construction of the concrete dam. But meanwhile, here are thousands of men and scores of machines at work on solid rock, which has been "unwatered," as the engineers call it, by means of a coffer-dam 2,100 feet in length and from 20 to 50 feet wide. We stood upon that crib-work, some scores of us visitors, gazing alternately at the ferociously swift water on one side and the rocky bed from which it had been fenced off on the other, and marvelled at the power of science and the audacity of man.

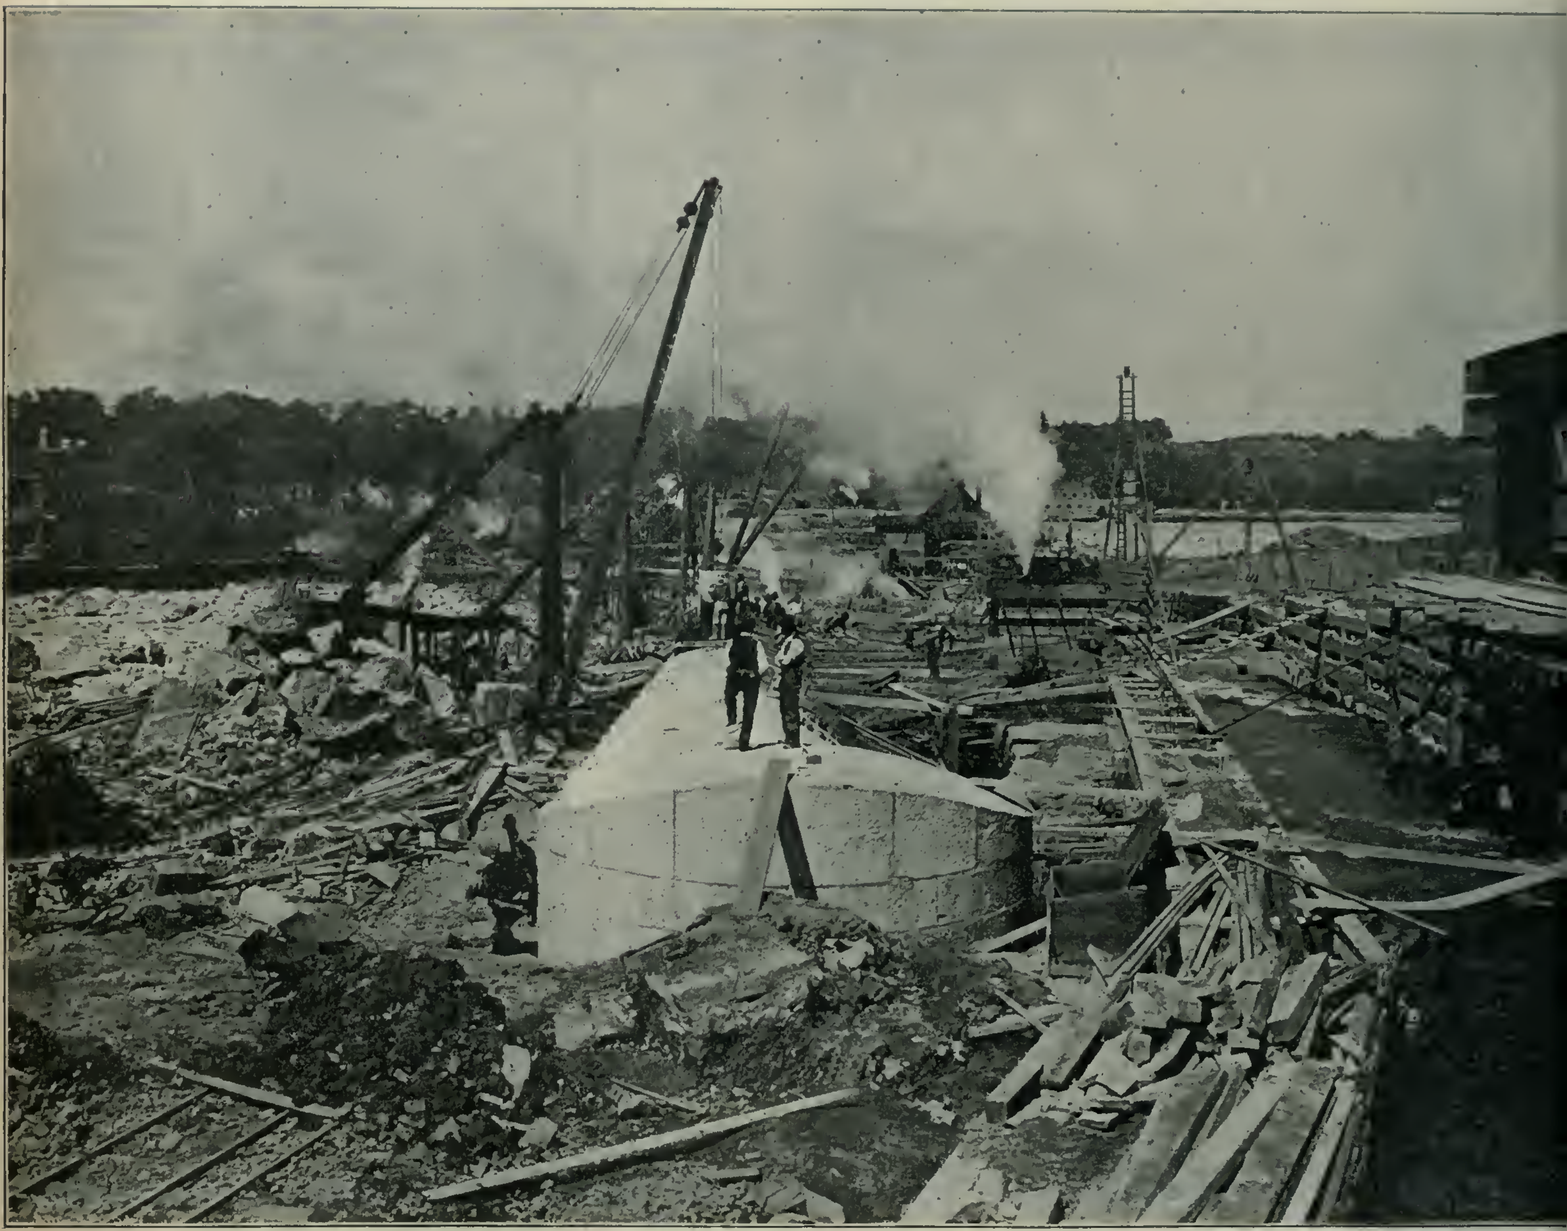
One of the most wonderful works of modern days is proceeding at Tempest Point, between Chippewa and Niagara Falls, Ontario. If our readers could see for themselves this vast enterprise, its boldness would impress them more than any printed description. But having been privileged to witness what has been already accomplished, we desire to assist in making known what the capitalists here engaged propose to do, for it has an important bearing upon the industrial future of Ontario.

They propose to develop 125,000 horse-power from the energy of Niagara rapids. This power they intend to transmit to Toronto and other industrial points, besides constructing an electric tramway from the Falls to Toronto. A private right of way 80 feet wide has already been secured by the Toronto and Niagara Power Company, between these places for the transmission of power by metal cable.

They have already pushed back that foaming water, twenty odd feet deep, and have laid bare the bed of the river over an area of fourteen acres, on which they will erect their power works to transmit electric energy.

A wheel-pit 416 feet in length and 144 feet deep is being cut in the solid rock (it is already 120 feet deep), where immense turbines will receive the water whose force, a million cubic feet per minute, concentrated by a gigantic dam, which is the subject of an illustration in our pages, is presently transformed into electric energy. The generators are of 12,500-h.p. each, and there are eleven of them. The power house is 500 feet long, handsome enough for Neptune's palace instead of an electric station. The main tail-race tunnel, now being excavated 150 feet under the bed of the river, and emptying below the Falls, will be 1,935 feet long and 26 feet high. There is a town site nearly two miles long on the Welland river on which to locate prospective industries.

In attempting to describe, in a series of articles, so important and far-reaching an enterprise, it is fitting that the fact should be kept prominently in view that the people at the head of it are Canadians. The best known of them are Frederick Nicholls, H. M. Pellatt, Wm. Mackenzie, James Ross, Hon. George A. Cox. These men are capitalists, but practical men as well, for every one of them has had experience in railway building or electrical work. And there are some Canadians on the staff of engineers, which, large as it necessarily is, has at the head of it men whose abilities are known all over this continent. Wherever observation and experience could suggest an improvement upon former methods of construction, the engineers have been prompt to adopt it. The number of men employed upon the works is at present not less than 3.300, and it has averaged



Bull-Nose of gathering dam. This dam which is of granite and concrete, will be entirely submerged but will act as a huge arm to draw the water into the wheel pit. The foaming rapids outside the present false work can be seen in the distance on the right.

about 2,000 for the past two years. Not the least astonishing feature of the work thus far has been the extraordinary rapidity of it. The contractor for the tail-race tunnel has beaten all records in quickness of work.

PHOENIX ASSURANCE COMPANY, LIMITED.

Space was lacking in our issue of last week to comment as we wished to do upon the figures exhibited in the report of this well-known English company for 1903. The revenue account shows net premiums of $7,105,935, and income from investments $257,010; to this add $2,831,285 reserve for unexpired risks from 1902, and there is a total of $10,194,230 to be dealt with. The net losses were $3,832,650 or at the rate of 53.93 per cent. of the premiums. Commissions and management expenses absorbed $2,290,570, equal to 32.23 per cent. of premiums, leaving 13.84 per cent., or nearly a round million dollars, as the underwriting profit—a very satisfactory figure. And the amount now declared, added to the October dividend, ought to prove contenting to the shareholders.

Turning to the balance sheet, we find the assets to be $9,934,975; of which $1,200,000 is in British Government securities; $1,249,000 in United States railway bonds; $308,000 in United States Government bonds; the remainder consisting of debentures, mortgages, real estate, and foreign securities of various kinds. The company has between $500,000 and $600,000 deposited at Ottawa for the security of Canadian policyholders. The capital of the Phœnix is $13,444,000, of which $1,344,400 is paid up. The general reserve and the investment reserve amount to $3,391,345; the reserve for unexpired risks is increased (over 1902) to $2,842,375; and there is carried at credit of profit and loss $1,412,335. It is further to be remarked, with respect to the transactions of the year, that while there are increased premium receipts over 1902, the expenses and losses show a decrease of close upon half a million dollars from those of that year.

The facts and figures of the report here reviewed ought to prove an object lesson to the business men of Canada—merchants, manufacturers, underwriters. Here is a company doing business for a hundred and twenty years in all parts of the civilized globe, meeting, of course, with reverses, conflagrations on a great scale, besides the usual losses incidental to fire insurance, and yet, after paying twenty shillings in the pound of every obligation, building up reserves of more than six millions of dollars.

"QUESTIONABLE LIFE INSURANCE TACTICS."

Editor, Monetary Times:—

Sir,—I notice an article in your issue of July 29th last, under the heading: "Questionable Life Insurance Tactics," and regret very much that I, as a subscriber, have not looked into the same before. The representative of the State Life Insurance Co., of Indiana, therein referred to, called on me a few days ago and represented his policy exactly as you have it, but instead of paying the premium after the ten years, I was to receive a cash income from their policy, which in ten years would amount to $830.91.

The net premium on a State Life Insurance Policy, age 34, is $135.50 per annum, but with ten years net premium it would only amount to $865.94, and with the policy dividends would bring it down to $404.19 of a cash investment, but the policy had a guarantee of $648.25, providing the inspector's contract was lived up to according to their statements.

I looked into the matter as well as I could, they having a number of bank managers in different Canadian cities, and letters from a number of responsible people in Detroit, and being assured that the policy was all right, I took out a $5,000 policy and gave my note for same. Now I have received the policy and Inspecter's contract, but on the face it is the same as an ordinary life policy. The Inspector's contract is a separate proposition, and upon looking over same closely, I find it dated differently from the policy, and it reads: Only good for ten years, whereas the policy is a straight life policy, and I will have to pay premiums as long as I keep it up.

Is there any way that I can get out of paying the note, which does not mature for two months yet? After figuring out the Government reserve and the insurance company's expenses, I cannot see how this Indiana concern can make the results they claim.

You are at perfect liberty to use this article in any way you see fit. I would appreciate very much if you can forward me any other issues of your paper that deal with this matter other than the other one referred to, as several copies of the Monetary Times since have been mislaid.

I am, yours truly,

ONTARIAN.

26th September, 1904.

NEW YORK LIFE EXAMINATION.

There has been lately issued in pamphlet form the report made by Mr. Isaac Vanderpoel, chief examiner of the New York State Insurance Department upon the affairs and condition of the New York Life Insurance Company at the close of 1903. This report is remarkable both on account of the minute examination to which the company's affairs were subjected and the extensive character of the transactions examined. Not only the books and documents of the head office in New York were looked into, but the branch offices in Paris and London. As an instance of the close scrutiny by the examiners it may be noted that in the case of bonds and mortgages (first liens on property) to the number of 455, representing an aggregate of $24,531,000 under this heading, the counsel and accountants employed by the Department found all mortgage loans within the excess marginal value required by law, and on this great sum only $28,319 of interest was past due.

Taking Government, State, municipal and railway bonds, the par value of which was $248,159,000, their market value was found to be $250,140,000, and they were carried on the company's books at $247,994,000. These were all counted and their purchase traced, and it was found that no interest was in default on any of them. Policy loans, policy liens, collateral loans to the extent of $36,000,000 in round figures were reported valid, and there was found to be cash in banks and trust companies $21,996,654, of which more than eighty per cent. was drawing interest. To go no further into detail, there were found to be in the company's possession $336,850,000 of admitted assets, while the net reserve on policies in force was $284,601,581. Such a splendid surplus as this represents is the best testimony of the thoroughly sound position of this splendid life office.

We have had the curiosity to turn up the Ottawa blue book to see the proportions of the Canadian business of the New York Life. It has over $39,000,000 at risk in Canada and more than $1,418,000 of annual premiums.

Some words of commendation are due to the good work of Mr. Richard J. Kearns, agency director of the Toronto branch, which takes in all of Western Ontario, who has enlarged the business of the company greatly during his six years' management. The volume has so increased as to make it necessary to remove the company's quarters to the Manning Arcade, where the office accommodation will be nearly double that of the present premises. If any one should desire the full report, only a part of which is reproduced in our pages to-day, it can be had, we are told, by application to the head office in New York.

BANKING AND FINANCIAL ITEMS.

What appear to be startling travesties of justice occur at times in all countries, but in none more frequently than in the United States. A man is charged with counterfeiting. He is arrested, and more than $10,000 in counterfeit $2 bills and a complete outfit for manufacturing bogus bills was found in his home. But a jury found him of unsound mind, and he was sent to an asylum. The man's name was Dr. Sanft, of Boston.

We understand that the underwriting of the issue by the Nova Scotia Steel and Coal Company of $1,500,000 six per cent. bonds, to be used for the building of new plant and for other purposes, has been accomplished with satisfaction to all concerned.

The Toronto Mortgage Company has taken over the Ontario mortgage interests of the Trust and Loan Company of Canada, Limited. A story gained currency that the latter had sold its handsome building on Toronto Street to the former company, but this, we learn, is not the case.

A seat on the New York Stock Exchange was sold the other day for $75,000, an increase of $3,000 on the previous sale. For a while, following the collapse in the stock boom, the valuation of such seats showed considerable decline. The public, who wished to speculate, or who were feverishly ready to be shorn, were not so numerous.

The Dominion Government has granted a charter to the British Canada Bank Note Company, with a capital of $500,000, and headquarters at Ottawa. Among those connected with the enterprise we note the names of Mayor Laporte and Messrs. W. McL. Walbank, R. Wilson-Smith, Robt. Bickerdike, and S. Carsley, all of Montreal.

A new plan for its preference shareholders is proposed by the Securities Holding Company, the concern which was organized last winter to take over and protect the unrealized assets of A. E. Ames & Co., Toronto. The company offers payment for certain of the shares by transferring to them individually their proportions, or as nearly their proportions as possible, of the shares mentioned.

It is interesting to learn more fully, as we do in the Havana Post of 15th instant, about the contract made by the Cuban Government with the Royal Bank of Canada for the payment of the checks that are to be issued to the holders of the certificates of the army of liberation. This contract, says the Post, was signed on September 14th by Mr. J. Garcia Montes, the Secretary of the Treasury, on behalf of the Government of the Republic of Cuba, and Mr. F. J. Sherman, the manager of the bank in Havana. The payments of the checks are to be made in Havana, Pinar del Rio, Matanzas, Cienfuegos, Santa Clara, Santiago de Cuba, Baracoa, Gibara, Guantanamo and Remedios by the bank's agents in those cities. It is understood that the distribution of the first $10,000,000 will begin on October 1st. A branch is to be opened at Camaguey (where are situated the offices and workshops of the Cuba company) under the management of Mr. R. W. Forrester, formerly assistant manager of the Havana and Santiago branches of the bank. This will prove a great convenience to the Province of Puerto Principe, which needed a bank. The action of the Cuban Government in making the Royal Bank of Canada its depository for the proceeds of the $35,000,000 loan, and entrusting it with the distribution is a great tribute to the strength and popularity of the institution.

Last week Canada had a distinguished visitor from England in the person of Mr. H. E. Holden, managing director of the London City and Midlands Bank, a very important institution. In Toronto he was tendered a banquet at the King Edward Hotel by Mr. Duncan Coulson, general manager of the Bank of Toronto, at which many representative financial and business men were present. Mr. Holden, in speaking of the money market in London, told how the great destruction of resources by the South African war has depleted that market very largely. But at the present time this has been made good by the employment of German and French capital.

At the scientific congress held at the World's Fair, St. Louis, several Canadians were given prominence in the proceedings. Prof McFadyen, of Knox College, Toronto, prominent in religious studies, dealt with the influence of religion on personal character, showing it affected the mind life of a man and his worth to society. On Friday, Mr. B. E. Walker, general manager of the Canadian Bank of Commerce, presided in the section of Money and Credit. At the dinner given on that evening to the members of the congress by the president of the Exposition, Mr. James Bryce spoke on behalf of Great Britain. It was interesting, and at the same time calculated to make one in such peaceful surroundings realize the tremendous folly of war to hear the eloquent representative from Japan assert that in this field his country and Russia could meet as friends.

LIFE AND ACCIDENT INSURANCE.

On Tuesday evening last, one of those little social events which it is always pleasant to record, took place at the head office of the Union Life Assurance Company in this city, when the presentation was made of a handsome Morris chair by the head office of the company to Mr. F. C. A. Fosbrooke, who has recently entered the ranks of the benedicts.

We are told that the Empire Accident and Surety Co., of London, Ont., now has its stock subscribed for, and is arranging details preliminary to beginning business. It is expected that the company will be ready before the beginning of the coming year, and will write accident, sickness and surety insurance.

A very regrettable occurrence was that at London on Monday last by which George R. Hamilton, district manager of the Imperial Life Insurance Company at that city lost his life. Later particulars show that the first suspicions that Mr. Hamilton had taken his own life deliberately were not true. He had been handling a revolver, left with him by a visitor, and remarked to a typewriter in the office that it was loaded, and he would take out the bullets. It is now believed that in doing so he accidentally discharged the weapon, and thereby shot himself fatally. The deceased was an estimable man, and, according to the managing director of the company, Mr. F. G. Cox, had served them well and faithfully for six years. There is no known reason that he should commit suicide.

Not every down-town merchant is unsettled in his mind with respect to the ability of our brigade to handle a fire. Here is one man—a very important man, too—who gives them a distinctly favorable certificate. Mr. W. G. Gooderham, manager of the Gooderham & Worts Co., wrote on Monday last to the Chief: "As a contribution to the Benefit Fund of the fire department, we have much pleasure in sending you herewith our cheque for $50, and we take this opportunity of complimenting you and your staff upon the efficient manner in which you handled the fire in our premises on Wellington Street a short time ago. At the same time we desire to express our surprise and pleasure at the success of your efforts to limit the damage resulting from the water, considering the large volume required owing to the combustible nature of the articles causing the fire."

Very satisfactory reports come to hand respecting the improved conditions prevailing in the Lancashire cotton industry. A late dispatch said that the American crop coming to the market so quickly and liberally already gives considerable relief to the cotton famine in Lancashire, and the Indian and Egyptian crops promise well to spinners and manufacturers, who expect plenty of material ready for the execution of large orders.

CLEARING HOUSE FIGURES.

The following are the figures of the Canadian Clearing Houses for the week ended with Thursday, 29th September, 1904, compared with those of the previous week:

	Sept. 29.	Sept. 22.
Montreal	$21,118,961	$21,306,292
Toronto	15,500,574	17,344,340
Winnipeg	4,934,303	4,729,382
Halifax	1,577,340	1,793,151
Hamilton	1,116,512	1,128,017
St. John	1,087,414	1,051,894
Vancouver	1,479,241	1,730,511
Victoria	1,081,903	565,650
Quebec	1,466,189	1,541,957
Ottawa	1,896,824	2,297,543
London	764,405	840,100
Total	$52,023,666	$54,333,437

NORTH OF ENGLAND LETTER.

A new and a plausible suggestion is made in the columns of The Textile Mercury, the English weekly paper of the textile manufacturing trades. The idea will perhaps appeal to a larger circle, and at its briefest the idea is that Colonial, and in especial Canadian, tariffs should be the means of placing insular and Canadian manufacturers on the same fair basis of trade. The journal recognizes that Canadian effort is entitled to its fair field, but contends that the English ought to suffer from no disfavor. It is argued that within the Empire all manufacturers should have an equal chance and that the Canadian mills have no greater right to the Canadian market than have mills in the Old Country. Hence, it follows that Canada has no justification for barring out the competition of our mills. And it is claimed that the sole degree of protection to which the woolen industry of the Dominion is entitled is that tax which should off-set the undoubted advantages in economy that producers of woolens at Home undeniably possess.

The Ottawa Free Press has acquainted us with the design of some interested parties to increase, if possible, the tax on woolens to 40 per cent., ad valorem, and 10 cents per lb. added in specific duty. What the effect of this would be it is not necessary to enquire; nor is it necessary here to expound the words of The Textile Mercury. But it occurs to one to ask whether the agitators for more protection would not remonstrate in such tones as this English paper uses, supposing that a reversal of Great Britain's fiscal policy were to hurt them? It seems not unlikely that some of them would turn to thoughts of Live and let Live, in those circumstances. If they have forgotten this valuable principle of conduct temporarily, perhaps the quotation will serve to refresh their memories of the maxim's worth. Whatever the result, no harm can accrue from a consideration of the feelings of Britons who try to be Imperialistic and at the same time to exist by trade.

To attach too much importance to a new symptom is perhaps easy. But what think Canadian readers of such talk as this, which proceeds from Mr. Arnold White, who seeks the suffrages of the electors of Londonderry:

> "Four hundred recent talks with Irish farmers and others confirm the view long held that in any change of our Imperial arrangements, Ireland must precede Canada. Irishmen are taxed seven millions of pounds sterling for their Government, while Scotland costs only four millions. But Irishmen pay to protect the Canadian coasts and even specially to safeguard Canadian salmon, while Canadians contribute nothing to support the monarchy, the navy, or our system of diplomacy."

The wrongs of Erin and the defaults of the Dominion bear no necessary connection, it may be observed. Yet here we see the mind of Ulster. Irish farming must receive a first or a major preference in any fiscal scheme adopted. It is believed, too, that the rest of Ireland, represented by the Home Rule party in Parliament, will have some similar claims to prefer when the time comes.

Nothing very complimentary has been said in response to the edict of the High Commissioner, who this week tells shippers to prepare to use new forms. One column of the certified invoice is to give the actual or bargain price, and the other "the fair market-value as sold for home consumption." To weak mortals, this ordeal may well prove trying. Dare anyone confess that he might have made a copper or so more out of selling similar stuff to the home trade? Or, as I have heard it asked, will the prices be given the same air of perfect propriety as are the answers to Uncle Sam's interrogatory to travellers? No doubt the queries: Are you an anarchist? Are you a polygamist? etc., have aroused derision in Canada as they have here. Opinion goes that the new arrangements will not solve the trouble at which it aims, and that shippers will hear more of some of their declarations whether those were truly or falsely made.

All metalliferous countries are interested to an extent in the success of the new electrical ore-finder. In Westmoreland the other day, this ingenious piece of telephonic apparatus located hematite at 88 feet down. The ore was found below a formation that was held to preclude any likelihood of payable metal. To the Barrow Steel Company, the experiment means a virtual windfall of not less than two million tons of precious iron. Lead in Wales and copper in Cornwall have also been located by means of properly-attuned instruments. Mexico and Australia are both about to employ the new marvel in prospecting work.

Manchester, Sept. 16th. NORTH COUNTRY.

VERY MODERN INSURANCE.

For twenty years popular papers have been giving away accident insurance benefits to their readers. Two English journals are now distributing life insurance policies, not gratuitously, exactly, among readers. To win a policy a reader has to do something arduous in the way of collecting subscriptions. Apparently, he then acquires cover for one year for £100 or so. Whether the performance has to be repeated annually to keep in benefit one does not know. Whether the paper will live two years in these days of sudden births and early deaths is not always certain. But to "insure" nowadays, says our Manchester correspondent, the insurance company is scarcely necessary. We have a savings Investment Corporation that describes itself as: "Progressive yet Prudent;" that issues "no better or safer definite guaranteed bonds;" that adjures the world to "make money, make money," by buying its installment system securities. You pay 5s. a month and receive a bond for £50 to which are attached 10 coupons of £5 each. These are to be redeemed "as rapidly as the business of the corporation allows." Periodical drawings redeem a few coupons at a time. In ten and one-half years, payment is achieved in full. Should you unfortunately die, the directors for a small fee will transfer your title to your personal representative, or even refund the money you have paid. This curious blend of a lottery and a deposit bank claims to be better than an insurance company. Its savings in medical examination fees alone are made to seem tremendous by the reminder that one life office paid £600,000 in ten years to medical examiners. Admirable as all the foregoing is, there is the fact to acknowledge that the corporation is exceedingly economical in the supply of its own statistics. Except for saying that it has powers to raise £50,000 in capital and has redeemed at its terminal drawings coupons worth £350, an eloquent silence as to its resources is maintained.

OUR AUSTRALIAN LETTER.

The Labor Government of the Commonwealth is still in power, though threatened by the combined genius of the experienced state craft of Australia. It may be that threatened Governments, like threatened men, live long. The affairs of the country go on much as usual, too, and I am not sure that the country does not breathe easier than it did before the Labor Government's accession to office. Their management of affairs in Parliament has been clever and their official management is not complained of. It is too soon to judge what the result will be, as the Government is practically only carrying out the policy of their predecessors and with slight changes passing, or trying to pass, their unfinished bills. If they continue it will upset all traditions respecting the conditions of education and training required for statesmanship.

The Premier was sixteen years ago assistant to the ostler in the Governor's stables, and is now the Governor's chief adviser. Fewer years ago the Leader in the Senate was digging ditches, and he is now half blind at that. He threw down his pick and shovel to run for Parliament, against a knight of the realm, and one of the wealthiest and most popular citizens of Adelaide, and beat him. Still fewer years ago the third man in the Cabinet was obtaining a precarious living by mending umbrellas in the streets of Sydney. To his credit, be it said, he studied as he worked, and is now a barrister. And so the biographies of these governing folk might be continued. Other countries have witnessed elevations from the low to the lofty, but not many quite so rapid nor under more unpropitious prospects. It is most unlikely that it could occur outside of Australia, and not very often even here.

An election was held in this State on Saturday last. The

result is not completely known, but it appears to be: Opposition, 46; Labor Party, 25; Government, 15, and Independents, 4. The Government has sustained itself for three years by the aid of the Labor Party, and the result has been the unhappy condition of affairs. It would have been far better if the Labor Party had been responsible for carrying on the Government. The Opposition should be able to govern even with its unsatisfactory majority. The fear of a dissolution will for two years, at least, give it a supremacy in Parliament. It has an opportunity to adopt sound principles of administration. If it does it will lead to an improvement in business.

The business outlook is brightening generally. The rains have been widespread, and the conditions so far favor a good crop. Canadian travellers, and they are not many, report good orders in Adelaide, moderate in Melbourne, poor in Sydney and Brisbane. New Zealand is pronounced all right. The harvest turned out better than was estimated. In political matters there is a possibility, but not a probability, that the Seddon Government, which has so long ruled, may meet trouble. It has for a long time cleverly juggled with the Prohibitionists, but the worm has turned and threatens to join the Opposition Party. It did so in a recent by-election, and the result was a bad surprise for the Government. Even if the Government is beaten, it will not affect business in the tight little islands.

The great drawback to an increase in Canadian business is the very uncertain fashion in which orders for merchandise have been filled. Most of the representatives of Canadian industries would like to visit the trade twice a year, but they are afraid to go until goods previously ordered have arrived, and it has taken over six months on the average for this to be done. In view of these delays, they are necessarily nervous as to the reception they may get amongst Australian purchasers.

Negotiations are still under way looking to the Vancouver steamers going to New Zealand. It does not do to trust to rumors or one would have to believe that the obstacles in the way were not creditable to certain prominent New Zealanders.

New Zealand has a State Life Insurance organization, and its workings are keenly watched here. It has not quite fulfilled expectations, the results being a little behind the best companies. I enclose a statement of two policies bearing on the matter, which illustrates the difference, and which may be of interest to Canadians.

Though the Queensland sugar crop promises to exceed the official estimate, there will be none to export. It will release a larger portion of the Fiji crop, and the "Manuka" will take five hundred tons on this trip for Canada. The Australasian list of exports promises to increase in both quantity and variety. Another portion of the same steamer's cargo is two hundred and fifty tons of salt. Previous steamers had some tons of maize and a good deal more would go if it can pass the weevil test of the British Government. Vigorous attempts are being made to introduce Australian dried fruits into your country, such as raisins and apricots. Very excellent in quality they are, and the growers think they need not fear California competition. Cocoanut oil for soap making and oil cake from Copra are other items of some extent in the cargo besides the usual lines in the season of wool, skins, hides and pelts.

There is no such increase of Canadian imports. Even the timber is failing. Of thirty-five vessels loading or on their way from Pacific Coast lumber ports, but one, and that the smallest of the craft, is from British Columbia. Timber is very low in price here, and Sydney is a bad port to ship to in such times as there is then trouble over the quality of the cargo. If the British Columbia millmen can find a market elsewhere, this is a good port to avoid for the time being. The usual cargoes of spruce are on the way from New Brunswick ports for Melbourne.

The Premier made a speech last night, in which he repeated his adhesion to our Imperial preferential policy, but thinks it useless to hold another Imperial Council until England shows its willingness to adopt it too. The real fact is that the Government is weak politically, and knows not what a day may bring forth. It takes strong governments to deal with such questions.

Sydney, New South Wales, 9th Aug., 1904. F. W.

NORTH-WEST CANADA.

A considerable group of directors and officials of the Grand Trunk Pacific Railway Company have been spending some weeks in the Canadian North-West, visiting portions which their line will traverse and taking note of the physical and climatic conditions. They have just returned; and one of the directors, Mr. E. R. Wood, in an interview with the Globe, describes graphically the impression made upon his mind by that vast and fertile region. This gentleman dwells upon several phases of the progress made in recent years in Manitoba and the Territories, and was earnest in his insistence upon the necessity of providing for their future.

"When one sees," said Mr. Wood, "the progress made in the Territories and British Columbia in those regions lacking railway facilities, and the astonishing development of the districts that already have railway communication, he begins to realize what a period of prosperity awaits this Western country, when it is provided with railway connections with the East, proportionate to the vastness of its agricultural and mineral resources. That the C.P.R. is alive to the fact is shown by its extraordinary expenditure in terminals at Winnipeg, which will provide a far better yard than even Pittsburg has. Why, away down at North Bay the company has spent $180,000 this year on yard facilities. Anyone travelling as I did through the West must declare that a new transcontinental line with a Pacific fleet is a necessity for this country."

As vice-president and general manager of the Central Canada Loan and Savings Company, Mr. Wood was deeply interested in the loan and mortgage business in the West. He found that the property all through the West was appreciating; that the companies earned a fair return, and that the mortgages were as liquid as the promissory note of a bank. There was a time in Eastern Canada when a farmer thought he was doing well if he paid the interest on his mortgage, and something extraordinary if he paid the principal. But in the West the ledger sheet of a loan company changes every day.

"That is the loan company's point of view?"

"It shows also the condition of the farmer. He could not pay off both interest and principal unless he had crops. He does that year after year, and invests in new land and new machinery. The property is appreciating continually. The Winnipeg wholesale men told me that they had occasionally to carry a man one year or possibly two years, because there was a hailstorm within a certain area or an early frost within another area; but these areas are limited, and the wholesalers carry their customers because they know the disasters are sporadic and the general outcome is good."

Being asked about the Western crop, the reply was that "from close investigation, by loan companies and banks, I believe the crop of wheat will be not less than 50,000,000 bushels. The general belief is that though the crop may be smaller, the better prices will send far more money than last year into the West."

Mr. Wood had not visited Winnipeg for four years previously, and was amazed at the progress made by that city. The banks evidently had faith in its future, for the Dominion, Union, Merchants, and others had put up superb buildings, and the remaining banks were contemplating following suit. The Bank of Commerce alone has to-day 53 clerks to do its business. One wholesale hardware house has a warehouse 225 feet long, 85 feet wide, and six stories high. This gives an indication of the business done there. But there is nothing to show that the business of the West was monopolized by Winnipeg. Everywhere they went was the same story. Brandon, Regina, Prince Albert, Calgary, Edmonton—all are prosperous and growing.

"How about coal and coke?" was the next question asked. "No one who has not visited the Kootenay district can have

any idea of its progress," said Mr. Wood, who, being a director of the Crow's Nest Pass Coal Company, left the other G.T.P. directors at Dunmore Junction on the return trip to run through the coal district. Fernie, he found, had recovered from its disastrous fire last spring, but unfortunately the town was not incorporated soon enough to prevent the re-erection of wooden buildings. "Six or seven years ago," said Mr. Wood, "where there was a wilderness there are now the towns of Michel, Fernie, Coal Creek, and Morrissey, with a population of at least 7,500, and the monthly wages of the coal company to their employees exceed $125,000. This is no visionary gold mine scheme, but based on a paying business proposition. The company has quite recently been able to realize its aim; that is, to be able to supply the demand. It has now 1,140 coke ovens turning out 1,500 tons of coke daily. Through the extension of the Great Northern Railway, it has obtained a market in the State of Montana, the greatest for coke in America, outside of Pittsburg. The company is now supplying coke to the smelters at Great Falls, Butte, Anaconda, Helena and Northport, as well as to all the Canadian smelters at Nelson, Trail, Greenwood and Grand Forks. There are no complaints about the quality of the coke, and, so far as Canadian smelters are concerned, none that they do not receive sufficient supply."

FOR GROCERS AND PROVISION DEALERS.

Canners in the Picton districts report serious damage to the corn and tomato crops from frost, and estimate that the pack will be only 60 per cent. of an average.

We hear from Montreal that some Pacific and Malaga style California raisins have been offered at ¼c. below standard prices. The quality, however, is said to be inferior, lacking sweetness, while the toughness of the skin renders the fruit unsuitable for seeding purposes.

More interest is being taken in dried fruits. California raisins are firmer, the various associations being reported as having come together. Prices of Malaga fruit coming by direct steamer to Montreal are quoted at 5s. 6d. for London layers, 8s. for connoisseur clusters, 11s. 9d. for Royal Buckinghams, and 14s. for Imperial Russian.

The salmon pack along the Northern British Columbia coast has now begun moving in quantity. Every steamer coming from the northern cannery ports for the next month is likely to be heavily laden with cased salmon. Much of the salmon from the Northern British Columbia coast will go to the United Kingdom, but it is reported that a large proportion of the pack of the Finlay, Durham & Brodie canneries is to be sent east by rail.

A Japanese firm in Vancouver has purchased some old hulls which have been lying in the False Creek mud flats for years, and will use them as floating salteries in connection with the gathering of humpback salmon for the Japanese markets. They have been renovated, houseworks are being erected on the decks, and will be occupied by Japanese engaged in fishing or salting. It is expected that several thousand boxes of salt dog salmon will be put up by the close of this season.

The conscience of the railroad companies—or whatever stands for them in lieu of a conscience—seems actually to have been affected by the strong evidence of excess and unfairness in railway rates presented by the fruit-growers before the Railway Commission a few weeks ago in Toronto. The companies, without waiting for any decision on the part of the latter, now announce a new schedule for fruits, which indeed has already been put into operation, whereby the rates for transportation are materially reduced to all the large centres. It is calculated that from the average point in Ontario to Montreal or Quebec the reduction amounts to about $10 per car, and to Winnipeg $36 per car. Several other valuable concessions are made.

Mr. J. Cowie, the fish-curing expert from Scotland who has been experimenting on Canadian herring in the Maritime Provinces, reports successful tests. A shipment of fifty packages of herring was sent to the Russian capital, and proved to be high-class fish, realizing prices as high as the best Scotch. A previous shipment to New York brought $11 to $13 per barrel, much more than ordinary Nova Scotia herring command in the same market. While, however, the herring cured at Canso are equal to the best Scotch, the fishermen have not so far been very successful in catching. This is partly due to the small size of the nets used on the steam drifter brought from England, and partly due to the absence of a record of the movements of the herring on the Atlantic coast. In order to give the experiment a fair trial the operations at Canso will be continued for three years, and it is probable the Government will purchase the "33" and equip her with nets better suited to our coast fishing.

ORDINARY AS COMPARED WITH STATE INSURANCE.

Our readers will be interested in perusing the undermentioned comparison of results of policies in our own society and the New Zealand Government Life Insurance Department. The following are the actual results of whole-life policies issued by the Australian Mutual Provident Society and the New Zealand Government Life Insurance Department on the life of John Manchester, Esq., of Waimate, South Canterbury, by whose permission we are enabled to publish the figures:

A. M. P. Society.

WHOLE LIFE POLICY NO. 31,357, ISSUED 1872.

Age 39, sum assured	£500	0	0
Yearly premium (paid by quarterly instalments)	16	1	8
Original sum assured	500	0	0
Bonuses added for 30¼ years to 31st Dec., 1902	483	2	0
Total sum at risk at 1st January, 1903	£983	2	0
Total premiums paid (30¼ years)	£486	10	5
Percentage of bonuses to premiums paid	99.3		

N. Z. Government Life.

WHOLE LIFE POLICY NO. 3,174, ISSUED 1873.

Age 40, sum assured	£500	0	0
Yearly premium	13	13	4
(The Government Life now charge £15 6s. 3d. for a similar policy.)			
Original sum assured	500	0	0
Bonuses added for 30 years to 31st Dec., 1902	179	19	0
Total sum at risk at 1st January, 1903	£679	19	0
Total premiums paid (30 years)	£410	0	0
Percentage of bonuses to premiums paid	43.9		

The proof of the pudding is in the eating, and we do not need to enlarge on the favorable showing in our own case, as above, and in an article on the subject in our June issue. —The Mutual Provident Messenger, August, 1904.

◆

—These are days of much activity of movement among scientific men and literati. A week ago members of the British Institution of Electrical Engineers and other British and foreign electrical experts made a memorable visit to Canada, where they visited Shawinigan Falls, in the Province of Quebec, and Niagara Falls, in the Province of Ontario, after spending two days in Montreal. On Thursday of the same week a three days' session of the Society of Chemical Industry, the first meeting the body ever held outside of Great Britain, was begun at Columbia University, New York, Sir Wm. Ramsey, K.C.B., the president, in the chair, and many eminent chemists from all over the world being present. At Washington the first session of the Eighth International Geographical Congress was called to order by Commander R. E. Peary, U.S.N., president of the congress. Paris, Berlin, London, Berne, Vienna, and Buda-Pesth were all represented. Both Geneva and Buda are anxious to have the session of 1908 held within her borders.

Mercantile Summary.

A haberdasher, at Halifax, named D. C. Gillis, is reported in deep water, his stock having been taken possession of, under a bill-of-sale, by a firm of Montreal creditors.

—It is satisfactory to learn from the report of the city auditor for 1903 that Toronto's municipal receipts from all sources amounted to $8,317,144. The disbursements were $7,659,066, leaving $658,078 to the good.

The shipments of ore from mines in the Kootenay-Yale district of British Columbia for the month of August totalled 100,368 tons, as compared with 74,626 in the previous year, and with 89,687 tons in August, 1903.

The Montreal Clothing Co., a style adopted by Simon & Miller, of Montreal, who started a small clothing manufacturing business a couple of years ago, has become involved, and a demand of assignment is reported. The liabilities are stated at about $15,000, on which they intimate an offer of 30 to 35 per cent. may be made. Miller also runs a small country store at Avonmore, in Stormont County, Ont., and Simon has been a journeyman tailor.

Minor Montreal failures for the week are as follows: A voluntary assignment has been made by J. Cousineau, tailor, who has been in business only three years in a small way. He owes $1,500.——Three demands of assignment have been made upon G. J. Dibs, also a tailor in a small way.——Napoleon Fortin, a hotelkeeper, has been asked to assign.——W. H. Hope & Co., picture dealers, have assigned, owing about $2,000.——P. Goldblatt, dealing in coal, has assigned voluntarily, owing but a small sum.

We regret to hear of the suspension of the very old established Montreal trade auction firm of Benning & Barsalou. The business of the firm has of late years been carried on, under the old style, by Arthur Barsalou, a son of one of the late original partners. It is reported that the absconding of the firm's office manager led to an investigation showing a considerable defalcation, and this with a falling off in business, and it is hinted some speculative losses, has necessitated an assignment. The liabilities are approximated at $50,000 to $60,000.

—A well-known Baltimore society man was recently spending a few days with his wife at Atlantic City, and in connection with his visit he tells the following story: When he seated himself in the dining-room on the evening of his arrival he discovered that he could not read the menu as he had left his glasses in his room, and his eyes were useless without them. When he passed the bill of fare to his wife, she exclaimed that she was in the same predicament. At a loss to know what to do, the gentleman called the waiter to him, and, pointing to the menu, said: "Read that to me and I will give you a dollar." Quick as a flash the waiter replied: "'Scuse me, boss, but I ain't had much ejication maself!" — Philadelphia Public Ledger.

Mercantile Summary

There seems to be considerable doubt as to the working out of the municipal telephone scheme for Brantford. The by-law recently passed has been withdrawn, and the question left open till October 17th. In the meantime, offers will be received from independent companies.

Messrs. Osborne & Francis, bond and investment brokers, in the Mail Building, have enlarged their premises so that now the offices extend from the front to the extreme rear of the building. Other alterations, such as decorating, installation of additional lighting facilities, etc., improve the chambers, so that the whole affect is most pleasing, not only to the occupants but also to customers.

It has been questioned for years by the theatrical managers of New York whether displaying lithographs in shop windows was an effective method of advertising plays. They have now concluded that it is not. At the beginning of the 1904 season the Managers' Association decided to confine their advertising efforts almost entirely to newspapers and abandon the display of lithographs in store windows. They did so. In consequence one month's trial has convinced them that the value of advertising through lithographs hung in store windows has been decidedly overrated, and that newspapers are a much better medium through which to reach the public.

On Sunday last, the well known and wealthy baker and philanthropist of New York, Louis Fleischmann, died of paralysis, aged 68. He was a soldier in Europe until 1874, when he resigned to emigrate to America. He opened the Vienna Model Bakery at the Centennial Exposition and later transferred it to New York, and at Christmas, in 1876, he established the unique charity, known as "The bread line," and ever since has distributed unsold bread nightly to all who have applied. The "Bread Line" of applicants grew until as many as 5,000 loaves a night were handed out, and in the winter cups of coffee were given with the bread. He was a man with a large heart as well as a good head.

We have just learned that it is the intention of Mr. J. B. Martin, of the important wholesale grocery firm of Laporte, Martin & Co., Montreal, to retire from business owing to ill-health, and to spend a long vacation in the south of France. It is likely that Mr. L. H. Delorme will succeed Mr. Martin in the financial direction of the firm, and that the position of secretary-treasurer will be filled by Mr. Joseph Ethier, who has for years been one of the managers. Our correspondent adds that Messrs. Delorme and Ethier have been in the firm for twenty-two years, and the fourth member, Mr. J. O. Boucher, has been associated with Mayor Laporte since he started in business 34 years ago. The business has lately been transformed into a joint stock concern, under the name of the Laporte-Martin Company, Limited. The present worthy Mayor of the city, Mr. H. Laporte, is the senior member of the house.

LIMITED
105 King St. West., - TORONTO

From St. John's, Que., we learn of the failure of D. Godin, dealing in coal, flour, etc., who is said to owe about $12,000.——T. Pelletier, painter, Fraserville, Que., is reported insolvent, owing about $1,200, and J. A. Marchand, boots and shoes, of the same place, lately gazetted as insolvent, is offering his creditors 60 cents on the dollar.——R. McGibbon, an agricultural implement agent, at Dundee, Que., has assigned with small liabilities.—An offer of compromise, at the rate of 60 cents on the dollar, is being made by S. E. Adam, general merchant and lumber dealer, of D'Israeli, Que., whose failure was noted in a late issue.——Alfred Tremblay, of Hebertville, Que., doing business in general merchandise and lumber, under the style of Savard & Tremblay, is reported in embarrassed shape, and makes a proposition to pay 40 cents on the dollar of liabilities. The business has been managed by his brother, Joseph Tremblay, who failed in 1901, as the result of his taking a contract to build a church, which turned out disastrously, and who did not get a discharge. Alfred Tremblay is a farmer, and it has been generally understood that the business is really Joseph's.——S. Fortin, also a general dealer of Hebertville, lately insolvent, is offering 40 per cent. on liabilities of $3,700, or thereabout.

Mercantile Summary.

The by-law imposing a tax of $500 on commercial travellers doing business in Quebec City directly with the consumer, has been revised, and the tax will be only $60 in future.

On the 25th of September, fire broke out in the Cecil Hotel, at Dawson, Y.T., and destroyed that entire block, besides several buildings on the opposite side of the street. Total loss about $200,000.

The Owen Sound, Georgian Bay Park and Summer Resort Co., Limited, have decided to sell their steamship "Canada" by public auction. The vessel's dimensions are: Length, 123 ft.; breadth, 24 ft.; and depth, 8 ft.

Mr. C. D. Haines, of Kniderhook, N.Y., proposes to build an electric railway from Hamilton to Brantford, at a cost of $225,000 to $300,000. A charter was granted to a company for a similar purpose some time ago, but not used.

The Builders' Supply Company's works, in London, Ont., have been destroyed by fire. It started in the burning kiln and rapidly swept over the entire premises. The loss is placed at $25,000; insurance, $8,000.

Park, Blackwell & Company's pork-packing establishment, in Toronto, was on Saturday damaged by fire, and a large quantity of hams and other goods destroyed or spoilt. The loss is placed at $25,000, covered by insurance.

Only a short while ago came the announcement of a $50,000 donation from Lord Strathcona to McGill University, Montreal. Now he and Sir William Macdonald each promise $25,000 towards the erection of a gymnasium which, it is estimated, will cost about $100,000.

Mr. C. M. Bostwick has transferred his extensive holdings of lumber land, at Great Salmon River and Martin's Head, in New Brunswick, to the Penepscot Paper Co., Brunswick, Me. Included in the sale are a well equipped sawmill at Great Salmon River, several operatives' houses, two schooners, and other properties. The timber tract is estimated at 100,000 acres in area. The price is said to be between $250,000 and $300,000.

A report is extant that the United States Steel Corporation are seriously contemplating the formation of a subsidiary company in Canada, and the erection of a factory to cost, with equipment, between $8,000,000 and $10,000,000. It is believed that not only would a large amount of Canadian business be obtained, but that by so doing special facilities would be taken advantage of for the carrying on of the export trade.

We hear from St. John's, Que., that rapid headway is being made with the erection of the Singer Sewing Machine Company's big factory. Within the last few days, over one thousand carloads of material have arrived on the grounds. In the course of construction, some 9,000,000 bricks will be used, besides 100,000 barrels of cement.

NOTICE TO SHAREHOLDERS.

The Twenty-Third Annual Meeting of the Shareholders of this Company for the election of the Directors to take the places of the retiring Directors, and the transaction of business generally, will be held on Wednesday, the 5th day of October next, at the principal office of the Company at Montreal, at Twelve o'clock, noon.

SPECIAL MEETING.

The meeting will be made special for the purpose of considering, and if approved, of authorizing an increase of the present Ordinary Capital Stock of the Company by an amount not exceeding $25,500,000 for the purposes of the Company—such increase of Stock to be issued from time to time according to the requirements of the Company and as may be determined by the Directors—and of adopting such resolution or By-law as may be deemed necessary in connection therewith in order to enable the Directors to give effect thereto.

The Common Stock transfer books will close in Montreal, New York and London at 3 p.m. on Thursday, September 1st. The Preference Stock books will also close at 3 p.m. on Thursday, 1st September.

All books will be re-opened on Thursday, 6th October.

THE MUNICIPAL CONVENTION.

The chief subject discussed at the Union of Municipalities Convention, at London, Ont., last week was a system of insurance for municipal buildings. Mayor Ellis, of Ottawa, started the ball rolling with an outline of his scheme of this nature to cover the entire Dominion. Starting with the premise that the fire insurance rates at present charged by companies were altogether too high, he thought there was no doubt as to the benefits to be derived from municipal insurance. Again, the contention was, the wider the risks were distributed, the less would there have to be paid out in proportion. "If," said he, "they could get a fair number of municipalities interested in his scheme, they would run very little risk of having their funds wiped out by a large fire." But this was just where Mr. Ellis struck a snag. One speaker rose to say that the smaller municipalities should not be called upon to assist the larger in matters of this kind. It sounded very nice, he thought, but in practice it would not be satisfactory. Some towns might go into the business for a time and then withdraw, and this would be disastrous to those remaining. And Mayor Drake, of Windsor, expressed the opinion that a corporation going into a business such as the one proposed would find its credit destroyed. Mayor Laporte, of Montreal, acknowledged that there were much greater risks in big cities, like Montreal, Ottawa, and Toronto than in small towns and villages, and that the smaller should not be bled to pay for the larger. The final upshot was the passing of an amended resolution to the effect that "this convention does not approve of a co-operative municipal insurance association."

◆

THE ONLY WAY TO SAVE.

A strong argument for life insurance is found in the scanty record of those who have been able to save out of their earnings enough to make provision for their bereaved families. There are multitudes of men to whom this is impossible, as their income is all required for the decent maintenance of their household, or, the margin for saving is too narrow to allow of a fund being accumulated out of it. Then, there are all manner of misfortunes to which men are liable, which drain away any savings that have been laid aside. Yet the great bulk of such persons could pay the premium on a life policy by exercising special economies. A gentleman who was lately visiting a statistician employed in the Census Bureau at Washington, was complaining that he had little or nothing to show for the money he had earned during the course of a lifetime. Through mismanagement of his affairs and unfortunate investments it had nearly all been lost.

"Do you know," asked the statistician, "how many men succeed in saving any large part of the money they have earned? In the Eastern Middle States, only about 2 per cent., in New England, 3 per cent., and in the West about 4 per cent." Such is the slender record of ultimate business success in this country. More than 95 per cent. of those whose earning powers or money-making abilities promise to place their families above want, die poor in this land of exceptional opportunities.

TORONTO MARKETS.

Toronto, Sept. 29th, 1904.

Chemicals, Drugs, Etc.— Prices continue firm, with a normally good trade going on locally. Opium is moving in some quantities, but it is only barely steady. Quinine is very firm, as a result of the 10 per cent. advance in prices at the London bank sales, but no great business is being done, the demand being slack. Carbolic acid is firm, while citric and tartaric acids are less so. Camphor shows an upward tendency. Sarsaparilla is rather dear.

Dry Goods.—Travellers are now busy with the sorting trade, and with spring woolens. The cotton market appears to be a little stronger, the expected further reductions not having been made. Woolen goods are, as a rule, moving out well, though some retailers in the sections north and west of Toronto claim they are still feeling the effects of last winter's severity, and that some of their stock is still in hand. On the whole, a good average season's trade is expected.

Flour and Grain.—There is no great

Sale of Debentures.

Tenders wanted for the purchase of $42,000 Debentures at 4% of the Brandon School District No. 129, as per by-law passed by the ratepayers of said city, and approved by the Department of Education. Same repayable in twenty years.

All tenders to be in the hands of the undersigned on or before 1st October, 1904.

Wm. WALKER,
Secretary-Treasurer

Box 549, Brandon, Man.

change to report in the flour market, which is quiet but steady. Ninety per cent. patents sell at $4.40 or a fraction higher, in buyers' bags, with extra brands slightly higher. No change has been made in rolled oats. Millfeed is steady, without any noteworthy feature. Wheat remains the same as last week. Barley is 1 to 2c. higher. Rye has gone up a cent to two cents. Not much business is being transacted.

Fruits and Vegetables.—The end of the season for domestic fruits and vegetables is now in sight, as is evidenced by the lighter offerings. These this week have been snapped up quickly. Some carload lots of cranberries have reached the city, and prices are a little easier. Jamaica oranges are to be seen now, for which the prices keep steady. We quote: Lawton berries, 5 to 7c.; peaches, white flesh, basket, 30 to 50c.; do., yellow, 40 to 75c.; do., Crawford, 75c. to $1.35; apples, basket, 15 to 25c.; do., barrel, $1.50 to $2; pears, 20 to 35c.; do., open baskets, 40 to 50c.; plums, 50 to 85c.; Canadian cantaloupes, 24-quart, 35 to 50c.; grapes, 18 to 35c.; cranberries, per barrel, $8; per box, $3. Foreign fruits: Oranges, Jamaicas, box, $3.50; lemons, Messinas, $3 to $3.50; do., Verdillis, $4; do., St. Nichols, $4; bananas, 1sts, bunch, $1.25 to $1.75; do., 8's, bunch, $1.10 to $1.25; do., red, $1.50 to $2.25; California peaches, $1; Tokay grapes, $1.50 to $2.50; tomatoes, 20 to 30c.; cucumbers, basket, 10 to 15c.; beans, basket, 20 to 25c.; green peppers, basket, 25 to 30c.; peppers, red, 75 to 80c.; egg plant, basket, 35 to 40c.; Canadian green corn, dozen, 9 to 11c.; Canadian celery, dozen, 40 to 60c.; sweet potatoes, $3 to $4; Spanish onions, case, $3; do., small case, $1.

Hides and Skins.—In sympathy with the lower prices in Chicago, values for hides here are weaker, though old prices still hold good. For lambskins, the demand is pretty good at 65c. Prices are steady for calfskins. Firmness prevails in the tallow market. In leather there is no special feature. Prices keep about as before, and greater activity is now looked for.

Groceries.—While prices for sugar at present are just the same, the movement is good, and the market strong. Apart from this, trade may be described as average. There is a fair to good demand for dried fruits. Currants are somewhat easier in the primary market. For teas there is not much of a demand for the movement, but values are firm. There is considerable strength in the market for canned goods.

Provisions.—An upward movement seems to have set in for butter, for which the export demand has improved a little. Stocks of cheese here are somewhat large still, and although in Britain they are on the light side, there is an easy tone to the market. Eggs are becoming still scarcer, due, some say, to the more than usually large consumption in the country. They range around 18½ to 20c. The market for hog products is good. Prices in England are especially high, due partially to the Chicago packers' strike.

Wool.—While the demand from the United States for Canadian wool has been almost nil for some time back, prices keep well up. In fact, the views of holders, compared with buyers, are too high to admit of much business being done. Offerings of pulled are light, but not much is needed apparently.

$7.75 to $8. Receipts of all kinds are small, and stock in inspection stores is very light.

Dairy Products.—While the butter market is fairly steady at the late advance, with moderate demand, the reports of a large fall make are causing a hanging back on the part of some buyers. For choicest Townships creamery quotations are made at 20 to 20¼c.; fine creamery, 18½ to 19½c.; dairy, 15 to 15½c. per lb. In cheese, the cable enquiry is rather disappointing, but a fair volume of local buying is reported at 8¾ to 8⅞c. for Quebecs; Townships, 9 to 9⅛c., and finest Westerns at 9⅛ to 9⅜c. per lb. The shipments of butter last week were fairly large, aggregating 28,602 packages, making the total for the season to date 368,568 packages, as against 254,069 packages for the same period last year. Of cheese, 77,794 boxes were exported last week, as against 79,504 boxes for the same week of 1903. The total of the present season's shipments to date is 1,410,772 boxes, being 407,500 boxes less than the figures at this date a year ago.

Dry Goods.—Orders have been more numerous since last writing, owing to the unseasonably cold weather of last week, which makes people think of warm clothing, but the general calculation appears to be that there will be a shortage in the volume of sorting business. City retailers report sales as still somewhat on the slow side. The general verdict with regard to collections is that they are about fair. With regard to values of textiles, no changes of any kind are reported.

Groceries.—There is no special briskness to the demand, though a fair aggregate of moderate orders is described, and next month is expected to be a busier one, as shipments of winter stocks of heavy goods to river points will then be in order. Some moderate supplies of new Valencia raisins are now to hand, via Liverpool, fine off-stalk being quoted at 6½ to 7c., and finest selected, 6¾ to 7¼c. The first direct steamer left Denia on the 24th, and is due here about the 13th or 14th prox. The "Jacona," the second direct steamer, left Patras to-day, but has yet to make the round of Mediterranean ports, besides calling at Halifax, and will hardly be here till well on in November. California raisins are now in good supply at low prices. Some Pacific and Malaga style California raisins have been offered at ¼c. below standard goods, but the quality is inferior, lacking sweetness, while the toughness of the skin renders the fruit unsuitable for seeding purposes. New shelled walnuts for November shipment are offered at 30 francs higher than September shipments of freshly cracked 1903 crop. Sicily filberts are advanced. The sugar market is without recent change, standard granulated being quoted by refiners at $4.65, and yellows at proportionate figures. Canners in the Picton district report serious frost damage to corn and tomatoes, and estimate the pack will be only 60 per cent. of the average.

Hides.—The offerings of beef hides are said to be about fairly absorbed by tanners, who pay 9½c. per lb. for No. 1 dealers buying at half a cent less. In

ACTUARY.
J. K. MACDONALD,
MANAGING-DIRECTOR.

Strong Endorsation of President McCall's Management of the New York Life.

On December 9th, last, President John A. McCall, of the New York Life, desirous of having all the claims of the management verified by disinterested experts, asked the New York Insurance Department to extend the usual annual checking of policy registers into the security and other accounts of the Company.

In doing this the examiners not only made a most thorough investigation of affairs at head office, but also personally examined the records of the European branches.

Under date of August 4th, Supt. Francis Hendrick, of the New York Insurance Department, forwarded to President McCall a copy of the report of the examination in which he expressed himself as being perfectly satisfied with the result of the examination, and that it confirmed the correctness of the annual statement to the insurance department for the calendar year ending Dec. 31, 1903, and likewise verifying the annual returns for the four previous years, succeeding the prior examination made to December 31, 1898.

Extracts from the report follow:—

REAL ESTATE.

The abstracts of title to all real estate owned have been examined by the Insurance Department, and in every case the titles are shown to be sound and properly vested in the company.

BONDS AND MORTGAGES.

These to the number of 455 were also examined and the reports thereon show that titles to the various properties mortgaged are clear, and that the company's investment on this class of securities is a first lien in every case.

BONDS OWNED.

Government bonds, State and municipal bonds, railroad bonds and other bonds of the par value of $248,159,010.27, were counted *seriatim* during the month of March last. These securities are carried upon the company's books at a "book value" of $247,994,383.06. This book value represents, in the main, the percentage basis upon which bonds were purchased, and is adjusted from time to time so as to mature these bonds at their par value, the adjustment in question being credited or charged to interest account in order to maintain the true balance of net or ledger assets at the close of each calendar year. The market values placed upon these securities have been authenticated by several of the most competent authorities on such matters in New York city, and the quotations used by the company December 31st, last, were regarded by them as being conservative and safe. The aggregate market value of bonds, excluding accrued interest, was $250,140,939.79. The interest accrued thereon was $1,714,342.83. There was no interest in default on any bonds. In addition to counting them in their entirety, the further fact that the company held absolute title to them was shown by tracing their purchase through security ledgers to cash books, check books, returned checks, etc., etc.

POLICY LOANS.

The amount of loans made to policyholders upon the security of their policies assigned to the company as collateral was found to be $28,202,073.32. All loans were found to be within the cash surrender values of the policies assigned.

OTHER POLICY LIENS.

"Lien notes" to the amount of $2,202,591.12 were found to have been executed by policyholders, and in force at the close of 1903. A special register is kept for the entry of these items. The accuracy of this register was proved from the lien notes in force December 31st last. The notes run in numerical order upon the register, and a liberal verification was had by a comparison of the notes with the entries in the register.

DEFERRED AND UNCOLLECTED PREMIUMS.

The total of these outstanding credits was found to amount to $7,958,357.39 exclusive of unpaid premiums on new business for which latter no credit was claimed.

LIABILITIES.

The reserve liability of the company's 812,711 policies, representing $1,745,212,899 of Insurance in force, including additions by dividends, December 31st, 1903, was computed by the Insurance Department, and certified by it as being $284,601,581. From this is deducted reserves on policies of reinsurance in companies authorized to do business in New York, $271,420, making the net reserve on policies in force $284,330,161.

RECEIPTS AND DISBURSEMENTS.

A general review in the nature of an examination involving an audit at random of the receipts and disbursements of the company since its last examination by the Insurance Department of the State of New York has occupied the greater portion of the time. Receipt vouchers to a considerable number, covering disbursements on every account, have been examined and traced through all subordinate books of initial entry, from cash to ledger. Check books and returned checks were also liberally examined in connection with these receipts for the payment of moneys by the company. The result of this work, I believe, amply justifies the conclusion that all disbursements found to have been incidental to the expense of conducting business, were in no instance excessive, unreasonable, or not warranted. The officers and representatives of the company gave your examiners full and free access to all its records, and aided them in every way in their endeavor to accomplish the work thoroughly and expeditiously. Not only was this true at the New York office, but also at the Paris and London offices. These were visited during the months of May and June of this year, and the total figures for Europe were examined in the company's annual returns to the Insurance Department since 1898. Taking its condition at the end of that year as certified to in report of examination by Insurance Department, dated October 16th, 1899, and bringing the condition of the company down to December 31st, 1903, as has been done by the examination just completed, gives the following:—

Condition, December 31st, 1903, net or ledger assets December 31st, 1898, as found on prior examination	$203,496,049.45
Total income from January 1st to December 31st, 1903	$349,466,265.67
Total	$552,962,315.12
Total disbursements from January 1st, 1889, to December 31st, 1903	$208,663,666.53
Total admitted assets, December 31st, 1903	$352,652.647.57

Over against these figures are given the liabilities, and the result is satisfactory. These are subdivided with the various classes of policies, dividends, etc.

The accuracy and thoroughness of the examination is attested to by the following certificate:—

State of New York,
County of New York, ss:

Isaac Vanderpoel, being duly sworn, deposes and says that the foregoing report, subscribed by him, is true to the best of his knowledge and belief.

ISAAC VANDERPOEL.

Subscribed and sworn to before me this 2nd day of August, 1904.

JOHN J. CUNNINGHAM,
Notary Public for Westchester County.

(L. S.). Certificate filed in New York County.

SWEET CAPORAL

CIGARETTES

STANDARD OF THE WORLD

SOLD BY ALL LEADING WHOLESALE HOUSES.

lambskins a fair seasonable business is reported, with the quotation remaining at 70c. each.

Leather.—Although local business for the month has not been very brisk, the aggregate of trade shows up fairly, and shipments of sole to Britain have been quite large. There is a pretty good demand from jobbers at the moment. Values are steady; manufacturers No. 2 sole leather is quoted at 23½ to 24c.; Western splits, 20 to 21c.; Quebec splits, 17c.; grain, 14c.; buff and pebble, 12c.; harness, 28 to 30c.; chrome calf, 20 to 22c.

Metals and Hardware.—The improvement in the demand for heavy metals is a little more pronounced, with some fair-sized orders reported from large consumers, and more enquiry with regard to goods required for future delivery. Little new is reported with regard to prices, which are fairly held, as a rule. Ingot tin is rather firmer at 31 to 32c.; lead, $3.25 to $3.30; copper, 13½ to 13¾c.; antimony and spelter as before. Canada plates incline to firmness, some dealers asking $2.30 in a jobbing way. All other lines of sheets and plates remain as quoted last week. Pig iron is steady at about $19 per ton for Summerlee; bar iron, $1.65 to $1.70; bar steel, $1.90 to $2 per hundred.

Oils, Paints and Glass.—Orders are coming in a little more freely, and the aggregate of business is fair for the season. The firmness in glass, referred to in last report, is becoming more pronounced, and all dealers are now said to be quoting $3, stiff, for first break, with the probability of further advance freely asserted. Turpentine is about steady at 81½c. Linseed oil remains easy at 43 to 44c. for raw, and the usual advance for boiled. Fish oils are dull and more or less nominal; cod oil is quoted at 35 to 38c.; steam refined seal, 60 to 65c.; whale oil, 45 to 50c. The nominal quotation for pure white lead is $4.50, but this figure is under-cut.

ECHOES FROM THE C.M.A. CONVENTION.

After welcoming the coming, Montreal speeded the parting guest at a memorable rate. The special train provided by the Grand Trunk for the Ontario manufacturers who wished to enjoy the banquet, left that city at two in the morning and was in Toronto before eight, making parts of the 333 miles at the rate of over 60 miles per hour.

Mentioning the banquet, it was annoying that while the hour of dinner, as put down in the menu, was eight o'clock, we never sat down till a quarter to nine, and never rose till 2.20 in the morning? It was eleven when the chairman began his introductory address, and it was eleven thirty when Sir Wilfrid Laurier, the first of the speakers, rose. This was not the fault of the Association; it arose from a failure of waiters to respond to an emergency appeal by the hotel people; the difficulty being in fact a matter of labor union tactics.

True, the gathering was a large one, for there were 438 sat down. But it was unfair to some of the best speakers in Canada, and unfair to those who went on purpose to hear them, that half what they said could not be heard because of the noise in that big dining-room.

The Premier spoke with his usual grace, and was quietly listened to; what he said did not at the time of its delivery sound so enigmatical as some newspapers on both sides of the Atlantic have since found it. Sir Howard Vincent, having a strong voice and knowing how to use it, was fairly well heard. Most of what Hon. Mr. McCarthy, of Trinidad, said was entirely lost to half the audience. Premier Ross, of Ontario, whom there was great curiosity to hear, not only on account of his deserved renown as a speaker, but also on account of recent circumstances, had to speak very late, and to a half-empty but still very noisy house. Hon. Mr. Foster, eloquent, as usual, almost forced his shrill tones to the ends of the room through the din by reason of his earnestness. Hon. Wm. Paterson, who has the most ponderous voice of all, did the sensible thing, when, at two in the morning, he acknowledged in a sentence the invitation to be present, and sat down. But his reticence disappointed many, who remember that he always says something when he speaks. The gem of the evening was the speech of F. D. Monk; its matter was good, its diction elegant, its delivery admirable.

Out of the 140 who made the trip, not one is likely to forget the truly sylvan welcome we received at St. Bruno, the summer residence of Mr. George E. Drummond—the "Bienvenu" and arches and streamers—the school children drawn up in line with little tri-colors and a big Union Jack—the fantastic rigs in which the habitants drove us up to the house—the piping and dancing—and oh! such a delightful lunch for a hungry crowd. The other proprietors of this fine old seignory of St. Bruno, Mr. E. L. Pease, Mr. B. Hal Brown, and Mr. T. J. Drummond, vied with each other to make our visit delightful.

Full Information Freely Given.
A. C. C. DINNICK, Managing Directo.

A well known man in Montreal, D. R. McCord, writes as follows to the Gazette of that city:

"Sir,—As I read the proceedings of the Canadian Manufacturers' Association, I was proud of being a Canadian. I am not always so. I saw that the traditions of the great English man of business were growing among us. The proverbial reproach of the nation of shopkeepers was contradicted. Breadth of view prevailed. While the fisc must be the measure of such an association, there was a fine dominant Imperialism. And Imperialism, to be possible and permanent, must be hand-and-hand with the fisc. Politics must be often shaped to business, and business not subordinated to theory. There was a ring of true politics about the meetings. We heard a practical expression of the value of the present by men whose commercial existence is bound up with it and a fine appreciation of our great future. We listen with pleasure, after dinner, to the politician reminding us of such, but with much greater pleasure to the words of those who are most actively part of the development of this present, and whose eye must be ever on a widening business horizon to achieve success. And their success is that of Canada.

"As your commercial circulation is happily wide, I sign rather fully, so that no mutual admiration can be attributed to me.

DAVID R. MCCORD, M.A., K.C.

GREAT NORTH-WESTERN TELEGRAPH COMPANY.

The annual general meeting of the shareholders of the Great Northwestern Telegraph Company was held on Wednesday, 28th inst., at the head office of the company, Toronto. The report submitted showed that the company had had a good year. Earnings were not quite so large as in 1902-03, which is to be accounted for almost entirely by the fact that stock speculation had declined. The receipts from commercial and industrial business were well maintained. Directors were re-elected as follows: President, H. P. Dwight; vice-president, Adam Brown; vice-president and general manager, I. McMichael; directors, James Hedley, W. C. Matthews, H. N. Baird, Toronto; Hon. Wm. McDougall, C.B., Ottawa; Col. R. C. Clowry, J. B. Vanevery, New York. The secretary-treasurer of the company continues to be Geo. D. Perry, and the auditor, A. C. McConnell.

ESTABLISHED 1858.
Managers and Underwriters.

—A report from Liverpool this week states that the demand for apples is slightly better. Greenings, No. 1, sell for 9s. to 11s.; No. 2, 7s. to 8s.; Colverts, 8s. to 10s.; Gravensteins, 14s. to 16s.; Blenheim, and King pippins, 12s. to 14s.

—Mr. Robert Melvin, of Guelph, Ont., president of the Montreal Life Assurance Company of Canada, vice-president of the Guelph and Ontario Savings Society, etc., also Mr. George Wegenast, of Waterloo, Ont., general manager of the Mutual Life, have been on a visit of inspection to Winnipeg and the West, where the latter company has large interests. These gentlemen are very enthusiastic with the progress which has been made already, and as to prospects for the future.

—The entire assets of the Canada Woolen Mills, including the plants and buildings at Carleton Place, Hespeler, and Waterloo, the site at Lambton Mills, and the stock of manufactured goods and raw materials, have been sold to Mr. William Long, of Hamilton, for $253,000 cash. In addition to being one of the largest shareholders in the company, Mr. Long was, after the bank, the largest creditor, having a claim for some $180,000. His intention is either to reopen the mills himself, or to form a company for that purpose.

Eastern firms should subscribe for THE COMMERCIAL and keep posted on Western trade

Accidents vs. Fires

It is said that 20,000,000 Accidents and Illnesses occur each year, but only 80,000 fires.

A business man protects his property against the loss that rarely happens—fire. He can replace his property, but he can never replace his time or his damaged arm.

The most liberal accident and sickness policies are issued by

THE METROPOLITAN LIFE INSURANCE CO.
(INCORPORATED BY THE STATE OF NEW YORK.)

The Company OF the People, BY the People, FOR the People.

ASSETS, $105,656,311.60

Proof of Public Confidence

This Company has more premium-paying business in force in the United States than any other Company, and for each of the last 10 Years has had more New Insurance accepted and issued in America than any other Company.

The Number of Policies in force is greater than that of any other Company in America, greater than all the Regular Life Insurance Companies put together (less one) and can only be appreciated by comparison. It is a greater number than the Combined Population of Greater New York, Chicago, Philadelphia, Boston, Toronto and Montreal.

Significant Facts

This Company's Policy-claims paid in 1903 averaged in number one for each minute and a third of each business day of 8 hours each, and, in amount, $89.00 a minute the year through.

THE DAILY AVERAGE OF THE COMPANY'S BUSINESS DURING 1903.

359	per day in number of Claims Paid.
6,297	per day in number of Policies Issued.
$1,303,559.06	per day in New Insurance Written.
$98,582.76	per day in Payments to Policy holders and addition to Reserve.
$53,841.18	per day in Increase of Assets

Full particulars regarding the plans of the Metropolitan may be obtained of any of its Agents in all the principal cities of the United States and Canada, or from the Home Office, 1 Madison Ave. New York City.

Amount of Canadian Securities deposited with the Dominion Government for the protection of Policy-holders in Canada, $1,800,000.00.

Summary 464-473

THE WESTERN CROP.

Our Winnipeg correspondent wires us as follows yesterday at noon: "The weather during the past week throughout the West has been generally fine, and about forty per cent. of the threshing is finished. The average yield is good in the majority of districts, running from 15 to 23 bushels of wheat per acre, and grading one, two and three northern."

◆

CANADIAN TRADE WITH AUSTRALIA.

We have just been made acquainted by our Sydney, New South Wales, correspondent of the fact that the trade reports for 1903 of the Australian Commonwealth have been published. Fragments of these reports of the trade of Australia for 1903 are given out, and they do not quite agree, but the following summary of the trade of the Commonwealth for the year is nearly correct:

	Imports.	Exports.
1902	£67,388,100	£71,082,800
1903	67,264,800	77,415,000

The trade of New South Wales, inward and outward, has been given in greater detail, and was as under:

IMPORTS.

	1901.	1902.	1903.
From other States	£9,368,011	£10,949,675	£12,792,252
United Kingdom	10,102,941	8,572,370	6,651,820
Other British countries..	2,010,703	1,994,901	1,875,633
Foreign countries	5,446,563	4,457,264	5,450,464
Total	£26,928,218	£25,974,210	£26,770,169

EXPORTS.

	1901.	1902.	1903.
To other States	£9,140,497	£7,568,922	£7,876,898
United Kingdom	7,647,963	7,102,596	7,559,795
Other British countries .	2,829,388	2,006,275	3,306,379
Foreign countries	7,733,276	6,866,258	7,995,075
Total	£27,351,124	£23,544,051	£26,738,191

The remarkable factor in the above résumé is the falling off in the import from Great Britain and the increase of that from other States. The exports from Australia have not varied much in the three years in any direction, but her imports from England went down from £10,102,000 in 1901 to £6,651,000 in 1903; while her imports from other Australian States went up from £9,368,000 to £12,792,000 in the same period. This shows that Federation is doing its expected work in increasing inter-State trade. The States of the Australian Federation are not only growing, but they are growing towards each other.

The Canadian share of the Australian trade is given as follows in 1902 and 1903 respectively:

	1902.	1903.
Imports from Canada	£346,580	£352,011
Exports to Canada	33,372	24,770

The Canadian trade with New South Wales was in three years:

	1901.	1902.	1903.
Imports from Canada	£143,599	£155,373	£212,039
Exports to Canada	35,712	26,051	23,850

These figures are rather curious. They show an increase last year of Canadian exports to New South Wales of nearly fifty-seven thousand pounds, and an increase to all Australia of less than five thousand. There must, therefore, have been a heavy decrease in the Canadian exports to Victoria, South Australia and Western Australia. As it has been stated, there was an increase to Queensland. When the details are published this anomaly may be explained. The great drop is in the Canadian exports of timber. It is a curious thing, our Sydney letter tells us, that when the prices of wood go down the United States mills push their hardest for trade and the Canadian miller simply quits. There are stated to be over thirty cargoes of timber on the way to Australia from the Pacific Coast of the United States and not one from Canada. Canadians who visit Sydney assert that British Columbia has the most marvellous reserves of Douglas fir close to the seaboard; but nevertheless she is not "in it" with Washington and Oregon as far as trade goes with the Australians. Otherwise the volume of general trade with Canada appears to have been fairly maintained.

As compared with these figures given above, reducing them to dollars, the Canadian Blue Book gives a much larger scope to merchandise going from the Dominion to the Australian Commonwealth. The Ottawa Government states the exports from Canada to Australia in 1902 as of the value of $2,586,554, and in 1903 of $2,892,528, which is one-third greater in the one case and almost forty per cent. in the other than the Australian official statistics thus far made known.

It will prove instructive to cite from the Ottawa Blue Book some particulars showing what kind of merchandise Canada sends to Australia and receives from her. The dozen articles in the subjoined list of exports amounted to over $2,600,000 in 1903. Besides these we exported to her: drugs and medicines, clover and grass seed, household furniture, spirits and wines, machinery, gunpowder and other explosives.

Canada's Exports to Australia, 1903.

Wheat, flour and grain	$587,597
Bicycles	112,998
Carriages and wagons	79,976
Cotton goods	228,275
Canned salmon	78,484
Leather	24,635
Boots and shoes	12,928
Agricultural implements	982,201
Musical instruments	36,248
Paper of various kinds	386,593
Provisions	76,451
Lumber	138,579

When we turn to the Canadian Blue Book to find what Canadian imports from the Australian Commonwealth are, the difficulty confronts us that they are lumped in the tables under the general heading "Australasia," which includes New Zealand, etc. The aggregate is, however, very small, something like $150,000 in all in 1903. The following are the main items: Flax goods, $16,907; fruits, $2,250; fur goods, $9,853; hides, $15,264; metal goods, $33,953; oil, $1,836; provisions, $12,612; settlers' effects, $12,500; wool and manufactures, $9,318; fertilizers $5,182.

◆

We are informed that Mr. W. A. P. Wood, B.A., A.I.A., has been appointed assistant actuary to the Canada Life Assurance Company.

OPENINGS FOR TRADE IN JAPAN.

Contrary to what might have been anticipated, the war with Russia does not appear to have retarded Japan's foreign trade; in fact, this has shown increasing growth and prosperity since the war began. As an illustration of the confidence of the Japanese themselves in its early and successful completion it may be remarked that the Yokohama Specie Bank, the leading native financial institution, has opened a branch at Dalny, and is reopening its branch at Newchwang, both which places have lately figured in Manchurian history. The prospects are that the commerce of Japan with foreign countries will show astonishing growth from this time on, which makes it important that Canada ought to put herself in readiness to do her share. Some facts and remarks gathered from a report recently to hand from Mr. Alex. McLean, Canadian trade agent in Yokohama, should prove of more than special interest.

Attention is being called to the bicycle trade of Japan. At first the "wheel" was, for some reason unexplained, not taken kindly to. But this condition is changing now, and many believe it has a great future before it in Japan. In 1902 the number of bicycles imported was 11,782, and their value $232,132, while in 1903, though the number was somewhat less, namely, 10,978, their value was $239,171. This coincidence of a decrease in number with a rise in valuation is attributed to a decrease of imports from the United States and a growing appreciation of the higher-priced, more solid and valuable bicycles from Great Britain. In fact, those coming from the latter country increased in the year from 197, worth $5,714, to 730, worth $21,930, while from the United States the falling off was noteworthy. It is regrettable, however, that there was a similar falling off in respect of Canada, which country shipped 209 wheels in 1902 and only 74 in 1903. It looks as if our manufacturers were not following up any advantages they may have gained.

Another article for which there would appear to be a fair outlet is sole leather, as to which several enquiries have been made of Canada. Total importations of sole leather into Japan have for the past three years averaged nearly $300,000 per annum, while for the first half of the current year this amounted to $277,755, chiefly from the United States. The qualities mostly in request are worth, f.o.b. San Francisco, from 19 to 26 cents per pound, of which the second quality, selling wholesale at Yokohama for $40 gold per 133 pounds, seems to be most in demand. The present duty amounts to $5.07 per 133 pounds. There is also some importation of leather belting.

A material which finds increasing demand in Japan is wood pulp. Last year the importation was over 16,000,000 pounds, worth about $313,569, most of which came from Great Britain, Scandinavia and Germany and the United States. Canada, perhaps the world's greatest pulp-producing country, at any rate in the future, figures but slightly so far as a shipper to Japan. The grades of pulp mostly sold cost, laid down in Yokohama, $147 and $62 per (long) ton respectively. It should be sent in sheets, thoroughly dried before packing, and put up in bales of eight or ten to the ton.

The consumption in Japan of wire nails is increasing every year. In 1903 the quantity imported was 39,104,000 pounds, valued at $754,462, mostly from the United States and Germany, whose manufacturers, it is believed, have an understanding as to prices. Great Britain does not send very many nails, only 473,000 odd pounds, but they are the best. Jobbers' prices in American nails range at present from $2.90 per keg for 12 gauge, 2½ inch, to $2.75 for 5 gauge, 7 inch. This includes the duty of 29 cents per keg. Nails for the Japanese market should be packed in extra strong kegs, 134 pounds net, lined with pitch paper to protect against rust, which causes them to sell as damaged stock.

THE CATTLE TRADE.

The cattle trade seems to be suffering in activity from the large proportion of medium and even poor-grade animals offering. For such the demand is very moderate; indeed, the large number on the market has a noticeable effect on the sale even of good-class stock. At both Toronto Junction and the Toronto markets this feature has resulted in a general easing off in prices, especially for exporters. The few really good lots offered were taken up pretty quickly, though with no stiffness of prices discernible, while ordinary ranchers' cattle were quite weak, and sold with difficulty. The general sale for extra choice exporters was at about $4.50 to $4.75, while at the Junction yards a few realized as high as $5; good to medium went at $4.25 to $4.40 per hundred. For butchers' the demand was better, but really choice animals were scarce, and the others affected the market adversely. Quotations ranged from $4 to $4.50; the bulk of the stock went for $3.40 to $4, while for rough and common as low as $2.25 was reached. Stockers sold at $3.40 to $3.65 for heavy and $2 to $3 for light, and there was no briskness in the demand at those rates. Milch cows have been fetching from $25 to $50, and for ordinary stock the enquiries were slow. Calves continued unchanged at 3 to 5c. per pound. The market is easy. Sheep and lambs have declined, export sheep being quoted at $2.75 to $3.65, and as low as $2 for culls. Lambs realized around $4.10. For hogs, which are a little higher, the present price is $5, with 25c. higher for selected.

In Montreal, too, there has been little or no improvement in the export trade for live stock. At the prices obtainable in the Old Country Canadian shippers have often lost money lately, and so the business being carried on is limited to immediate needs. Complaint also is heard about the quality of the animals which have been coming forward, especially from Ontario points. Freight rates are still somewhat irregular, those to London being usually 32s. 6d. per head, and sometimes a shilling or two lower. Liverpool and Glasgow rates remain at 40s. The few choice cattle on the market have been selling at 4½ to 4¾c., fair at 3¼ to 3½c., and common at 2 to 3c. Sheep and lambs have been more active and prices have ruled steadier. Hogs are quite firm.

A recent report from Liverpool says that trade in live stock is in only a middling condition. The best beeves have been bought by London buyers at 11c., though a commoner price was 10½c. A weaker feeling has been manifest for sheep owing to the adverse conditions in the beef trade. At Deptford the major portion of the Canadian offerings last reported sold at 11½ to 12c., with 12¾c. for American.

It will interest our readers to know that, owing to the large increase of importations of cattle by way of the Manchester Ship Canal, the facilities for receiving, storing and slaughtering animals at that port are to be considerably increased.

CO-OPERATION AND COMPETITION.

In an advancing market, when manufacturers can get almost anything they ask for their products, and workingmen for their labor, combinations either of capital or labor are exceedingly powerful. But it is shrewdly pointed out by the New York Journal of Commerce that when markets are sagging and there is barely enough business to go around, competition is not long in making itself felt. And the rub is just here, because it is at precisely such a time as the latter that co-operation would be of prime value. Labor unions in Chicago confess to a decrease in membership within the past few months from 240,000 to 140,000. In spite of the prominent, and it was claimed predominant, position of the Steel Trust, competition in steel products began some time ago, and a cut in steel billets has just been followed by one in tin plates. So it goes on. When combination is most needed is the time when it is least in evidence.

DOLLARS AND ROMANCE.

This continent does not contain so many vestiges of the "hallowed past" that we can afford recklessly to rid ourselves of those that remain. Yet there is scarcely a building of historic interest in Canada which, at some time or another, has not received its share of abuse in the name of what is called progress from people to whom nothing but plain utility can appeal. For such as these, no doubt, the ruins of Pompeii are absurdly untidy and out-of-date, though possibly they might in some cases be utilized for the foundations of a modern hotel or business block. In like manner the Chateau de Ramezay in Montreal might be pulled down, thus opening up a fine site for a market or some civic building. The La Salle windmill on the Lachine Road, too, is an anachronism—not nearly so effective as a twentieth century air-motor. To preserve the Plains of Abraham is a shocking waste of space, while the narrow streets of a city like Quebec would never be allowed to remain by a self-respecting community. So say our Canadian iconoclasts.

We shall not place before such people any argument which appeals to love of the picturesque for its own sake or to a frame of mind which finds irresistible charm in traces of great personalities long gone by. In such argument, where the two view-points have so little in common, one is simply laying himself out to be worsted. The only point likely to be allowed entrance into the mental receptiveness of this not inconsiderable proportion of the community is the one that refers to dollars and cents. Show them that historical associations are worth something of a tangible nature, that there is "something to them," as they themselves would say, and the sentiment which urges them to "preserve their monuments" immediately becomes less absurd. And this can be done; romance most certainly has its cash value, even in this enlightened age. It is safe to say that for the thousands of Americans and others who come every year to Quebec and other Canadian cities, the great attraction is, not climate, nor even landscape, but the fact that here they can see the links which visibly bind the Present with the Past, and bear the imprints of a time when man, even if he did not build so quickly, yet knew better what he wanted and built "more sure." Millions of dollars are spent in Italy every year in the gratification of this not unworthy spirit—and many thousands in Canada. Why should we kill the goose that lays the golden egg at the behest of people who want all our surroundings to be of a dead level of uniformity so as to save space in a spaceful world?

◆

FIRE INSURANCE SUGGESTIONS FROM MONTREAL.

Mr. Benoit, chief of the Montreal Fire Brigade, made some remarks the other day which are well worth the consideration of fire insurance companies and the public generally. One suggestion he made was that thousands of dollars might be saved and many fires would be prevented if there were a better system of inspection for insured properties. The chief found that many of the worst fires that occurred in the winter time were caused by over-heated furnaces or stoves and pipes that were not properly protected. If the underwriters would inspect the heating systems of their patrons with deliberate care, and either refuse to insure or to pay the insurance placed on property carelessly heated, and a clause to this effect were inserted in all contracts a salutary effect would soon be evident. Many people, the chief said, paid little attention to the terms of their contracts; hence the need of careful and regular inspection.

It was also, he declared, a notorious fact that risks on goods in stores were taken by insurance companies with little regard to the inventory or to the keeping up of the stock in such stores. "It was not uncommon for first negotiations for insurance risks to be made by telephone. The agent urged the proprietor, when he visited the store, to place the valuation as high as possible, because the former's percentage would be higher and the latter's return in case of fire, would be much greater." It was also surprising how soon a bona fide heavy stock could be reduced; how by neglect it could remain low, and some night the furnace became overheated, pipes fell down, electric wires became deranged, or something else occurred that need not have occurred, and there were heavy losses to pay. The chief ventured the opinion that if the insurance companies would pay as much attention to these things as the city council was giving to the improvement of the fire department there would be fewer fires and smaller losses.

The indictment here brought is a severe one, and affects not only the insured but the companies. As a responsible official, with much experience, Chief Benoit would hardly make such charges of laxity with regard to inspection and to the manner of negotiation by insurance agents unless prepared to substantiate them. If they are true, the companies should have something to say, and that quickly.

◆

TORONTO'S BURNED AREA REBUILDING.

It is encouraging to find such a general air of activity in the portion of Toronto which was devastated by fire in April last. On the west side of Bay Street from Melinda to Wellington the Debenham building is practically finished, and every lot shows men at the work of reconstruction. Farther on, towards Toronto Bay, the extensive Brock building is steadily rising. We are pleased to hear that this warehouse is not to be taller than four stories. Sky-scraping buildings in the narrow streets of the business quarter are a dangerous fad. The report got abroad that the Merchants Bank of Canada had purchased and was about to build upon the lot on the south-east corner of Wellington and Bay, formerly occupied by the Wyld-Darling warehouse, a lofty building, partly for the business of the bank and partly for renting. Upon enquiry at the bank we are unable to confirm the story.

South of Front Street is still a dreary expanse of bricks and mortar; here levelled and below the street—there in the shape of fragments of walls still standing. The expectation that the Union Station and approaches will cover practically all this district from the Queen's Hotel up to near the Custom House prevents, of course, any rebuilding of warehouses upon it. The north side of Front Street west of Bay shows, however, excellent progress in reconstruction. And but for the folly of strikes among bricklayers and allied trades, which consumed so many valuable weeks, various buildings should have been roofed by now. The Gordon-Mackay warehouse is three stories above ground, and two of these are occupied by the firm, who have put on a false roof to permit them to do business and yet allow building to go on above them. W. J. Gage & Co. and the Copp-Clark Company have their buildings in a very good state of forwardness. So also, on Wellington Street at the back of them, the Brown Brothers' building is slowly proceeding. Going towards Yonge Street one finds the Kilgour building nearly reconstructed and the Bradshaw building alongside being roofed. In three months more, if strikes can be avoided, this sorely spoiled portion of Toronto will be transformed into a fairly regular and attractive series of business blocks of a generally better character as to fire risk than before.

◆

MOOSE JAW.

Moose Jaw, Assiniboia, which has a population of more than 2,500, has begun the construction of a system of waterworks, sewage and electric lighting at a probable cost of $150,000, and the erection of a city hall to cost $25,570. The first of these is to be financed by the issue of 5 per cent. debentures for $150,000, repayable 1910 to 1954. Only $10,000 needs to be raised, it seems, to build the city hall, because the old one and other city real estate can be sold. Power to incorporate the city was given last year by the Government of the Territories, who at their session of September, this year, gave authority to a city by-law for the construction of these works. Contracts amounting to $125,000 have already been let on the waterworks, sewage, etc., the engineer for which is Willis Chipman, C.E. The place shows civic assets valued at $20,242 in fire equipment, city hall and park, lots on market square, and cash, and all it owes is $8,666 debentures, which have been reduced from $20,000 borrowed at 5 to 8 per cent. The tax roll for 1904 shows an assessment of $1,662,000, or deducting exemptions, $1,161,000. The waterworks service should be particularly well patronized as Moose Jaw, which is in an excellent country, and is a divisional point of the C.P.R., has hitherto been served by the primitive and expensive system of water carts and pails.

ACTIVITY IN THE FAR WEST.

Upon leaving Regina the other day for a trip up north on the Prince Albert branch, which runs through Lumsden, Dundurn, and Saskatoon, my attention was drawn to the activities around the railway station. Crowds of passengers bound north with all their varied belongings are awaiting the incoming train from the east. Until it arrives, our train will not pull out, so its arrival is not without interest to those of us who want to be off. One cannot but help note the changes that are so rapidly being brought about; new railway sidings with miles of extra trackage, a round-house to accommodate the growing needs of a fast developing traffic. Freight cars are here by the hundred, the platforms and sheds are laden with every kind of merchandise; light binders, traction engines, and separators are sufficiently in evidence to establish something of the value of this country to the manufacturer, the wagon and the hay-fork men get their portion. After all, the filling up of the West is more than a phrase. The vivifying influence of the new arrivals affects advantageously every form of commercial enterprise.

This train on this branch used to go lazily north only twice a week: a more humdrum ride one could not imagine. All the way from Regina to Prince Albert there was nothing that one could dignify with the name of village. On that 249 mile stretch the passengers were invariably few in number; drummers spoke to each other of the trip with dread because it was so much like going out of the world; card parties were organized to while away the time, and grateful expressions have been heard when the trip was over.

Now what a change! A daily train, and besides the ordinary coaches, a Pullman is attached and well patronized. The ordinary cars are crowded with a bright and bustling lot of passengers. One soon finds the reason of all this change as our train climbs up the steep ascent on and through the beautiful Qu'Appelle Valley. One descries broad acres of grain stooks flanked here and there with neat and comfortable-looking farm buildings; miles of khaki-clad fields. The heart of the reaper has been made glad this year by an abundant crop of a fair sample at a good price, and there is no despondent tone in his voice. The first stop we make is at Lumsden, which has a well-to-do air about it. We note the fine, new residences of solid brick.

Astonishment at what he sees is expressed by an American fellow passenger who has come to spy out the land—a new land, and who is hardly prepared to find such palatial homes at such a point. Lumsden possesses a large grist mill, several elevators, a chartered bank (the Union), and several fine stores. This young community is doing remarkably well. Faith is displayed in the future of the village by the number of fine structures going up. Our stop at Lumsden has been prolonged by reason of the great quantity of settlers' effects being put off. The train hands make themselves busy, and we are presently away. The American land-seeker, before mentioned, is very observant; nothing escapes his vigilant eye. A field of wheat meets with unstinted praise; another of oats is on the honor roll. Such crops are far beyond his expectations. "A great country!" he says in all sincerity.

How very different the progress of the average Englishman in like circumstances. When travelling he buries himself in a cheap novel, is bored to death by the length of the journey, and kills time as best he can in a lounging, idle, criticizing way. One cannot help noting, on the other hand, the bright, alert, practical man from over the border, interested at every turn, and who seems so easily to grasp, as he goes along, the pith and gist of things. All this wilderness that was is now a fruitful field, and much credit is owing to the men from over the United States border, and these men are becoming good Canadians, too.

Carberry, 3rd October. RAMBLER.

DOMINION EXHIBITION AT WINNIPEG.

It must be gratifying to the people of Winnipeg to find that the great Fair of 1904 held within her borders is shown to have been financially successful. To those responsible for its conduct this result must be especially gratifying and they are to be congratulated heartily upon it. At a large meeting of the Exhibition board held on the 28th ult., it was shown that the association has a cash balance after all expenses to date are covered of $6,482.38. There is still owing to the association, $2,678, making a total of $9,160. In addition, the directors have repaid to the Imperial Bank an overdraft from last year of $12,413, have paid other accounts from last year amounting to $2,600, have refunded $12,000 to the city for the erection of the colonnade, and have further expended $10,000 on improvements to the grounds and buildings. The receipts amounted to $168,302.20, and disbursements to date have been $146,805.69.

The president of the Exhibition board, J. T. Gordon, M.P.P., in addressing the directors at the meeting, congratulated them, the manager, the city council, the citizens of Winnipeg and the West, for the loyal support they gave the Dominion Exhibition, that in every branch the receipts exceeded the estimates. "Everything has run smoothly," he said, "and the board appreciates the splendid service rendered them by our manager and his staff." Mr. Gordon also congratulated the citizens of Winnipeg who made such a splendid exhibit, and the members of the Canadian Manufacturers' Association, also the press of the Dominion, and the railway companies. He referred also to the splendid service rendered the board by the Street Railway Company. "It is no mean complaint to those who first conceived the idea of the holding of the Dominion Fair in Winnipeg, that the total attendance exceeded 200,000."

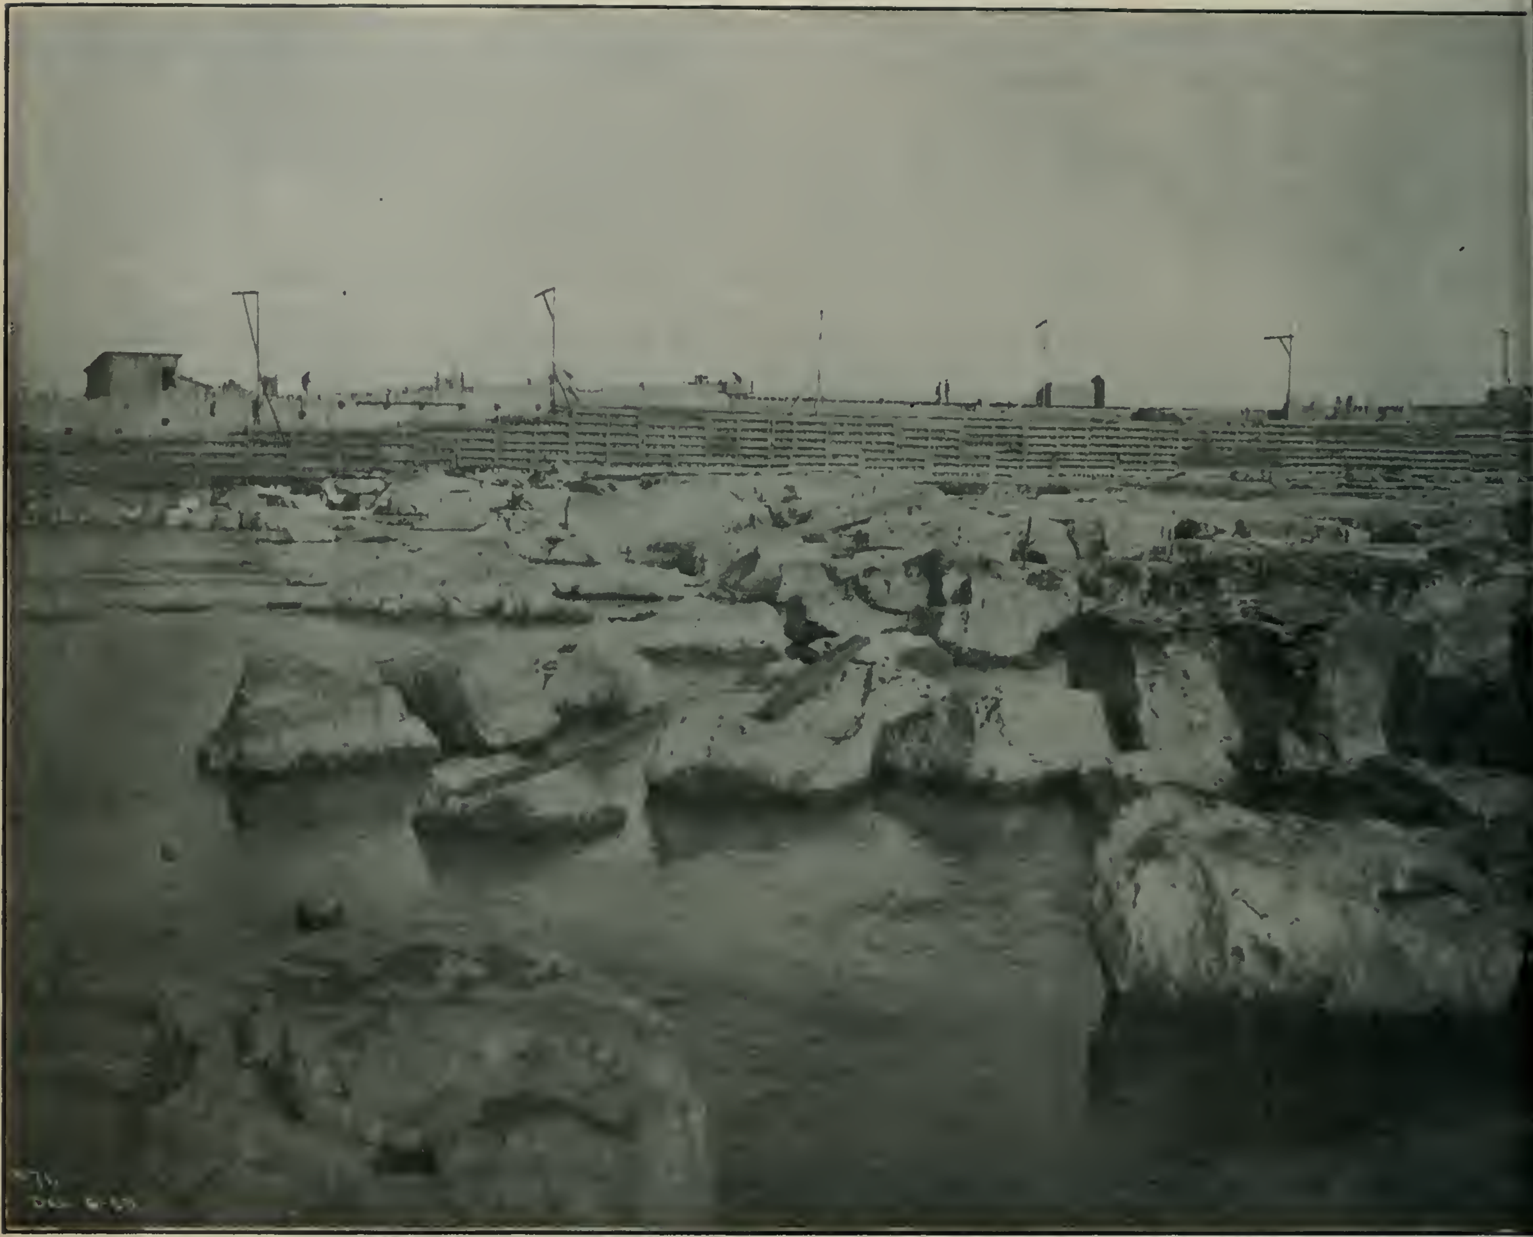
It will, we are sure, be learned with regret by all well wishers of the Winnipeg Summer Fair that two of the best-known and most valuable of its officers are this year leaving its direction. We refer to Mr. Gordon and the general manager, Mr. F. W. Heubach. No one could have shown greater devotion than Mr. Heubach has done for years to this fair, and there are very few who could have done as well in his place. Much of the success that the Winnipeg Exhibition has attained has been the result of the unremitting labors of a few public-spirited men.

A COLOSSAL INDUSTRIAL ENTERPRISE.

Second Paper.

Our readers will, we feel sure, wish to learn more of the work of the Electrical Development Company at Niagara Falls, after having read our brief résumé on September 30th, of the company's achieved and intended operations. Naturally, on seeing a photographic picture of the surface works, one wonders at the daring of the scheme. To build a crib-work coffer dam was of the first necessity if the work of construction was to be carried on. Some engineers declared it could not be done, because the combination of current and boulder-strewn river bottom was one which forbade the successful placing of cribs. But the company's engineers determined to make the trial. A contract was given, and the first crib was put in place early in April, 1903. For four hundred yards from the shore the work was comparatively easy, and the cribs were built into position.

Then the work got out to where it had to be carried on at right angles to deep water flowing at a high velocity. This was a most difficult business. A platform was suspended out for sixteen feet from the end of each last crib, and standing on this the engineers had to sound every inch of the river bottom with an iron rod, the cribs being built to fit afterwards. An idea can be gained of the force of the water when it is mentioned that frequently the sounding rod was bent almost at right angles. And an idea of the character of the bottom can be gathered from the photograph of the river bed, taken when unwatered. This curious-looking piece of the earth's surface is where the fierce Cascade Rapids used to toss their manes in air before the crib work at top of the picture was put down. What look like boulders are not boulders, but jagged parts of the rock which have been hollowed out into these curious shapes by the action of rapid water for many thousands of years. Behind the crib-work in the distance are the boiling rapids, fifteen feet deep; and they boiled just as deep over the rocks in the foreground of the picture before this crib-work was put down.



BED OF THE CASCADE RAPIDS, BETWEEN THE MAIN AND SUBSIDIARY COFFER DAMS. THE DEPTH OF WATER AT THIS POINT WAS FOURTEEN TO FIFTEEN FEET.

It is an instance of how not only man but animals can get accustomed to gaze upon the most appalling sights of Nature unafraid, to see that old horse at the upper right-hand corner of the picture quietly munching his oats on the coffer-dam, with deadly rapid water within three feet of his nose on one side and a gulf of grotesque rock-masses twenty feet below him on the other. Some of the feats performed day after day by the workmen on this exposed crib-work equal in daring if not in agility the world-renowned feats of Blondin on the tight-rope a mile below.

That this perilous work was done so successfully is a testimony to the ability of Mr. Hugh L. Cooper, the chief hydraulic engineer, and Mr. Beverley R. Value, the resident engineer. It is certainly an undertaking as great as has ever been designed or constructed in that line of work. While there are many novel engineering features about the enterprise, the general plan does not partake of the experimental, but follows the best engineering precedents, with such variations as failures and partial successes elsewhere have dictated.

About two thousand feet above the crest of the Falls an immense hole has been sunk into the solid rock for the wheel-pit. This huge incision into Nature's side is 415 feet long by 25 feet wide, and at present is 120 feet deep. When completed the bottom, on which the turbines will rest, will be 150 feet below the original surface. The formation of ice during the winter months is one of the serious problems which confront the hydraulic engineer at Niagara Falls. The site selected for the power house is believed to offer less trouble from this cause than any other plant at the Falls. The ice goes down, as a rule, on the United States side, and the site for the power house is at a point where the little ice which goes down on the Canadian side will not be troublesome. Before the water reaches the turbine chamber it has to pass through two rows of submerged arches and then through a rack, by which means all ice and floating debris will be kept clear of the pumps. A large gathering dam will ensure a supply of close on 2,000,000 cubic feet of water per minute, the needs of the station being estimated at 700,000 cubic feet. The overflow will pass over the top of this dam in a cascade, adding to the picturesqueness of the Falls.

The water thus gathered will be conveyed downward through steel tubes to the water wheels located in the bottom of the wheel-pit, and the differences of level provided by the design are such that, after deducting losses from friction and the velocity of approach and discharge, there will remain an operating head of 143 feet to be used by the turbines. This wheel-pit is provided with masonry lining, the provision that the turbines and all the machinery above them shall rest upon solid rock foundations, instead of artificial supports, is an element newly adopted for this construction, the value of which is apparent.

The eleven generators will be installed on masonry foundations at the level of the power house floor, and the connection between the generators and the turbines at the bottom of the wheel-pit will be made by the use of a hollow shaft, travelling in a vertical position, and having a total length of approximately 115 feet, supported at three intermediate points by solid masonry bearings.

INCENDIARISM IN MASSACHUSETTS.

Not very long ago there was established in Massachusetts the office of fire marshal. The beneficial results of this appointment are clearly set forth in a paper read a few days ago by Mr. F. R. Cutting, commissioner of insurance for that State. In Massachusetts, incendiarism is looked on, and no doubt rightly, as the cause of a large proportion of the fires which occur there. According to the commissioner's report for 1903, there were in that year 209 incendiary fires and 64 convictions. Prior to the establishment of the office of fire marshal, the number of convictions was less than 18 per cent., while last year these numbered over 80 per cent. Besides this, there can be little doubt that the actual incendiarism has been largely reduced by this plan of detection and prompt punishment. To show to what a dangerous extent this crime may grow, it may be stated that within eighteen months, two young men were discovered to have set no fewer than 38 fires, with an aggregate loss of $1,500,000. One 12-year-old boy set twelve fires with a loss of $70,000. A man of 74 years was found to have collected insurance fifteen times on practically the same furniture in his dwelling. Of the incendiary fires 35 per cent. were found to be frauds on insurance companies, 11 per cent. were from pyromania, 5 from revenge, and 2 to conceal crimes. Of the insurance frauds 11 per cent. had had more than one fire and one case had had 17 fires.

BANKING AND FINANCIAL MATTERS.

The Sovereign Bank of Canada has opened a branch at Jacob's, Ont., with Mr. L. P. Snider in charge.

An office was opened in Woodstock by the Crown Bank of Canada on 1st October. Mr. S. B. Fuller is manager of it.

An issue of $40,000 of 4 per cent. bonds of the Southern Judicial District of Manitoba has just been successfully made at par. The money will be used in the erection of judicial buildings at Morden.

Two new branches are announced by the Traders' Bank of Canada. One is at Cargill, on the Wellington, Grey and Bruce division of the Grand Trunk, between Walkerton and Paisley; the other at Elora, near Guelph.

For the month of September the total capitalization of corporations chartered in the eastern States was $66,000,000, or more than twice as much as in August. The latter month, however, was the lowest on record for a number of years. While there is manifested a certain revival of productive energy, there is evidently no desire to lengthen the list of those huge consolidations of capital which figured so largely in the public eye a year or two ago.

We learn from the Gazette that the new Eastern Townships Bank building at Richmond is completed at a cost of twelve thousand dollars. Also that a branch of the same bank was opened last week at Thetford Mines, Mr. F. A. Briggs, of the Waterloo branch, being acting manager.

A recent despatch from Windsor, Ont., said that the finance committee of the city council had arranged the sale of $25,000 debentures to capitalists without the usual form of advertising, and have secured better than 96 per cent., which is said to be one of the highest figures paid to any municipality in Ontario.

Messrs. Ussher, Playfair & Co., the Toronto stock and insurance brokers, have entered into a partnership with Mr. A. H. Martens, who was formerly with Messrs. A. E. Webb & Co., and Robert Beaty & Co., both stock-broking firms of the same city. The new firm, which will be known as Ussher, Playfair & Martens, has purchased the seat on the Toronto Stock Exchange formerly held by the late Mr. C. C. Baines, and now, under promising auspices, is opening out a business in buying and selling securities on the 'Changes of Toronto, Montreal, New York and Boston.

LIFE INSURANCE NOTES.

Advantage was taken of the presence in Toronto of Mr. Richard Teece, F.I.A., F.S.S., by members of the insurance fraternity to entertain that gentleman at luncheon at McConkey's. Hon. George A. Cox occupied the chair, and there were present Messrs. F. Sanderson, L. Goldman, E. W. Cox, F. Sparling, C. H. Fuller, T. Bradshaw, J. J. Junkin, R. Junkin, P. C. H. Papps, J. K. Macdonald, E. Marshall. Mr. Teece is general manager and actuary of the Australian Mutual Provident Society, the largest of its kind in the British Empire, and for thirty-nine years he has been connected with its management, which is among the most successful known in the profession. Mr. Teece has left for his Australian home via C.P.R. to Vancouver.

Mr. B. F. Steben and Mr. A. H. Vipond, of Montreal, are what may be called the champions of a section of the insurance agency world. The New York Life, the company which they both represent, maintains an association, known as the $200,000 club, membership in which is restricted to agents securing at least $200,000 of new paid business in the year. The official positions in this club are, it is needless to say, eagerly competed for, that of president being looked upon as a very high distinction indeed. This is what has been achieved by Mr. Steben, the result having been made known at the recent convention of the club, at West Baden Springs. In the last twelve months he secured no less than $1,107,000 new insurance, certainly a remarkable showing for a Canadian agent acting for a foreign company. Mr. Vipond's championship is that for the Eastern Department of the same company's business, which makes him vice-president.

GROCERS AND PROVISION DEALERS.

A large fruit canning factory is to be erected at Hull, Que., at a cost of something like $50,000.

The Regina Board of Trade invites correspondence on the subject of establishing a live stock market at that place.

Mr. P .A. Barry purposes to start a fruit canning factory near Kamloops, B.C., together with a plant for turning out tin cans under an improved process.

Prices for apples in the Old Country are a little better this week. A cable from Liverpool says Kings No. 1 were selling at 11s. to 14s.; No. 2's, 9s. to 10s. 6d.; Greenings, No. 1, 7s. to 8s. 6d.; No. 2, 5s. 6d., to 6s. 6d.; fancy sorts such as Blenheim Orange, Ribston and King Pippins, 7s. to 11s.; Snows, 13s. 6d. to 14s. 6.

A few days ago, a car of fall wheat was received in the Winnipeg market, which is said to be the first of its kind, for it is spring wheat which is grown in our North-West as a rule. It came from Claresholm, in Southern Alta. No decision has been arrived at as to its grading, so far as we have heard, but the general opinion is that it will class with No. 1 white winter.

Among the enquiries relating to Canadian trade, which the Canadian Government Office in London received during the week ending 16th September, were the following: A London firm desires to hear from reliable manufacturers in Canada of pure maple dowels, rounded and smooth, 32, 34, and 36 inches long, and 7-16 to 14-16 diameter. A firm making yarn, twine, line and cordage from hemp, flax, cotton, jute, etc., are desirous of getting into communication with buyers in Canada. A British house, who say they cannot obtain sufficient supplies of amber mica for their requirements, would communicate with Canadian exporters of the same. A Canadian maker of clothes pins has sent samples of his goods to the Canadian Offices, Victoria St., London.

DRY GOODS NOTES.

John Macdonald & Company, Toronto, have at present a particularly well assorted stock of house-furnishings, linoleums and oilcloths, in all sorts of colorings and designs, carpets of all makes, rugs, squares, etc., which may be seen to advantage in their large and well arranged showrooms.

Mrs. Farmer Prosper told her husband one day, says the Kansas City Journal, that she was going to town to buy a new parlor carpet, and asked what kind she should get. The reply of Farmer Prosper was: "Any kind ye like, Belindy. It makes no diff'rence—bustles, ex-minister, croquettes or ingrate. Suit yourself."

We understand that the sale of the Canada Woolen Mills properties to Mr. W. D. Long, of Hamilton, is being contested by Mr. G. F. Benson, of Montreal, the owner of a large amount of stock, on the ground that the former should not have been permitted to profit from his position as an inspector of the estate. Mr. Benson, it is said, has practically made an offer of $275,000 for the properties, which is $22,000 more than the price to be paid by Mr. Long.

Work is progressing quickly on the plant of the Drummond Cotton and Bleaching Company, Limited, at Drummondville, Que., which will devote its entire attention to the bleaching of high-class cotton goods. At present a large proportion of the high-grade cotton goods used in Canada comes from England, and as a matter of fact the grey and unbleached cottons used in the new factory will continue to be imported from there, but they will be finished in this country.

TRADE ENQUIRIES.

Curiosity at least; something more, let us hope, is shown in the following dozen enquiries received from France and the Mediterranean by the French Chamber of Commerce in Montreal. A Parisian firm wants to be put into communication with the Canadian buyers of cod liver, whale, seal and generally industrial oils. A French manufacturer of modellers' tools is desirous to be put in touch with a good agent in this market. A cold storage warehouse wishes to get into communication with fruits and fish exporters. A French firm wants reliable agents in Canada to sell engravings and frames. A big proprietor of vineyard plots in Tunis and Algiers, wants a good representative in Canada for the sale of his wines. A manufacturer of rice-starch in France is desirous to correspond with dealers of like products in Canada. A French firm exporting sardines and canned goods wishes to communicate with like buyers in this country. An important Parisian firm manufacturing instruments of precision for marine and observatories, wants to open up with Canadian houses. A French manufacturer of shirts and underwear wants an agent to sell his products in the Dominion. A man expert in the silk trade, speaking French and German, wants an employ as seller or buyer in a good Canadian house. Good references. An experienced man wants to buy laces in France for Canadian houses. A cognac firm wants good representatives in Canada.

The new requirement of the United States post-office department that all the clerks in the railway mail service shall give $1,000 bonds, went into effect on September 1st. It is probable that the American Surety Co. will get the bulk of the business, says the Investigator, as it has offered a 50 cent rate. Few of the other companies care to compete at this figure, their rates being $1 to $2. They admit that it is possible for a company to be safe at this low rate provided it can get practically all the business, so as to secure a general average, as any careful inspection would be impossible at such a figure.

—The seriousness of industrial conditions at the cotton manufacturing town of Fall River, Massachusetts, on account of the prolonged strike of cotton operatives, is thus referred to by the Dary Goods Economist: "Fourteen thousand are said to have left the city, and numbers of those who remained have applied to the authorities for relief. Most people would regard half a loaf as better than no bread at all. The Fall River operatives had considerably more than the traditional half loaf, but they blindly followed the advice of their leaders and now find themselves on the verge of starvation. On the manufacturers, however, falls a considerable share of the blame, and it looks as if they, too, would not come off scatheless, seeing that cessation of production aids Southern manufacturing centres in wresting the palm from their great New England rival."

—Improvement of some sort is badly needed in the railway arrangements in the western part of Toronto. Inconvenience, ugliness, and danger are all incurred through the present style of level crossings at Sunnyside and the entrance to High Park from the Lake Shore Road. We are glad to see, therefore, that the Grand Trunk authorities are keeping the question in mind. Mr. Somerville, the company's resident engineer, states that the plan proposed is to raise the tracks about twelve feet from the west side of the Humber to Sunnyside. There is no grade on that section now. This would allow of running all the streets going north from the Lake Shore Road, including both entrances to High Park, under the tracks. Then from a point about opposite Roncesvalles Ave. the tracks would be lowered to Strachan Ave., and bridges would be required for all the crossings in South Parkdale. Between Dufferin street and Dunn Ave. the tracks would be lowered about fifteen feet. The clearance required by the law for a bridge over a railway track being twenty-two feet six inches, the bridges in South Parkdale would have to be raised seven or eight feet. Mr. Somerville was inclined to agree with the suggestion made by City Engineer Rust that a bridge should be built over the tracks from Queen street, south to the Lake Shore road, at Sunnyside, extended to about where the old Parkdale waterworks are situated.

CLEARING HOUSE FIGURES.

The following are the figures of the Canadian Clearing Houses for the week ended with Thursday, 6th October, 1904, compared with those of the previous week:

	Oct. 6.	Sept. 29.
Montreal	$24,184,164	$21,118,961
Toronto	19,790,488	15,500.574
Winnipeg	5,619,492	4,934,303
Halifax	1,717,382	1,577,340
Hamilton	1,227,134	1,116,512
St. John	1,142,094	1,087,414
Vancouver	1,684,337	1,479,241
Victoria	542,360	1,081,903
Quebec	1,942,129	1,466,189
Ottawa	2,627,133	1,736,701
London	....	764,405
Total	$........	$51,863,543

THE TRUST AND LOAN COMPANY OF CANADA.

Editor Monetary Times:—

Sir;—My attention has been drawn to certain statements made in the Toronto local press, to the effect that our Toronto office premises have been sold to the "Toronto Mortgage Company," and that the same company had purchased our Ontario mortgage interests en bloc.

Will you kindly allow me to give both statements an entire contradiction.

L. EDYE, Commissioner.

Montreal, 5th October, 1904.

RETIREMENT OF MR. N. W. BETHUNE.

It has become known during the present week that Mr. Norman W. Bethune, who has been for many years district superintendent at Ottawa of the Great North Western Telegraph Company, has resigned from the service. Mr. Bethune is one of those whom the telegraph operators of the present day admiringly call "Old Timers." He has been 57 years in the service of this company and the Montreal Telegraph Company, having gone to Ottawa (from Montreal, where he had been local manager), while that place was yet known as Bytown. His record during this long period as a citizen, an official, and a man, is one of which any person might be proud. His friends will wish him all the comfort which retirement from a very responsible post can give him.

Having made enquiry as to the truth of the report of Mr. Bethune's resignation, at the head office of the company in Toronto, the Monetary Times was informed of its correctness. The president, Mr. Dwight, in his reply as a gratifying illustration of the regard which one of these forwarded the following interesting letter, which we print two distinguished "Old Timers" has for the other.

> "My business and personal relations with Mr. Bethune date from the year 1847, when we both began our careers as telegraph operators on the line of the Montreal Telegraph Co., which was opened for business between Quebec, Montreal and Toronto during that year. For forty years, Mr. Bethune has filled the position of telegraph manager for that company and the one which leased its wires, the Great North-Western Telegraph Co., in Ottawa, at which point, since the seat of Government was established there and it became the Capital and political focus of the Dominion, it has required special tact and judgment to conduct the business. I do not remember during the whole of this period to have received a single complaint as to Mr. Bethune's management, nor has any doubt arisen in any respect as to his entire competency and strict integrity in his position as local manager and superintendent of the Ottawa district. I have always looked upon Mr. Bethune not only as a faithful employee of the company, but as a personal friend, whose loyalty both in personal and business relations was never for one moment to be doubted. Mr. Bethune is a man of rare intelligence, and carries with him into his retirement the good wishes of all who have had the pleasure of his acquaintance."
>
> H. P. DWIGHT.
>
> Toronto, 5th October.

When the editor of this journal was writing, some ten or a dozen years ago, with the collaboration of a dozen or more of the brethren of the telegraph key, a series of papers on The Telegraph in Canada, he was fortunate enough to secure and was very pleased to print several contributions from Mr. Bethune's pen. These described his membership of the class in the art of Morse telegraphy taught by Mr. O. S. Wood in Montreal in 1847—his advent in Port Hope—the adventures of amateur telegraph repairers—his association with Gisborne, Torney, Ben Toye, and Dwight—his Grove battery experiences in Toronto—copper wire lines versus iron wire lines—and Sam. Porter's Buffalo to Toronto experiments. It was like his modesty to omit all mention of his own arduous work as manager of the Ottawa office and superintendent of the Ottawa district. In 1863, when he went to that city, there was but one telegraph line, namely, between Prescott and Ottawa. During the forty years that have elapsed since, Mr. Bethune has had a large share in covering the Upper Ottawa district with a network of electric wires.

THROUGH NEWFOUNDLAND BY RAIL.

Major Hamilton, of Brantford, has sent us his story of a trip to Newfoundland; and we cannot do better than make some extracts from it. He travelled over 4,000 miles in about thirteen days, and is enthusiastic over his voyage. Arriving at North Sydney by train at eleven one evening the Major went to his berth on board the steamship "Bruce" for Port au Basques, 92 miles away. Arriving before breakfast at the picturesque town, to be interviewed by customs officials, the passengers got ready for the long railway ride to St. John's. "The railway is narrow gauge, 3 feet 6 inches, and belongs to the Reid Newfoundland Co., which controls the electric and railway service of the Island. Our train consisted of one baggage and mail car, two second-class and one first-class car and two sleeping cars." The second-class resembled the Old Country thirds of long ago with their wooden seats. The train left at 8 a.m., on the journey of 548 miles to St. Johns, heading first north-east then east, then south, taking twenty-eight hours, and passing some eighty stations. "The road winds through a rocky country with little vegetation except scrubby cedars, wild flowers and grass. Here and there is seen a little cabin, likely occupied by railway employees. The first place of interest is Sandy Point, on St. Georges Bay, on the West Coast, where there is an extensive settlement, and it may be said that the coast here is a part of the so-called French shore. The inhabitants are practically all engaged in fishing." After two and a half hours' run, Bay of Islands was reached, half-way up the Island on the West Coast where the Bank of Montreal has a branch, and where it is noted that stores, hotels, and private dwellings give every appearance of prosperity. Farther on was Glenwood, with a large saw-mill, 233 miles from St. Johns, and still farther east, Benton, where there is also a saw-mill, but in disuse, and the workmen's dwellings all empty—a deserted town. Near here is a chain of lakes noted for salmon fishing, also much wooded land largely fire-swept. At Port Blandford is found the steamer "Dundee," which makes semi-weekly trips between eighteen ports on Bonavista Bay, lying to the east, Trinity Bay is next, to the southward, and when Placentia Junction is reached the party "saw for the first time what would be considered good farming land in Ontario." Here starts a branch line of railway to Harbor Grace and Carbonear. Shortly they reach Brigus Junction, and are presently running round Conception Bay. All along here are busy scenes, largely a fisherman's country. "Shortly afterwards we are in sight of Belle Island, where a large steamer is loading iron for Sydney, N.S. Near by are Little Belle Isle and Kelly's Island. After passing the villages of Manuels and Topsails, with their pretty summer-houses and good roads we pass the Octagon, a summer hotel and grounds"

Another half hour lands us, says the record, at the fine new railway station in St Johns. An electric railway, owned by the Newfoundland Company, passes the station. The fine harbor, land-locked, is fairly well filled with vessels of all sizes: ships-of-war, training ships, bankers, whalers and the new cruiser "Canada," just built at Barrow-in-Furness. Water Street, the principal business street, contains, in the district destroyed by the great fire a few years ago, many fine modern stores and warehouses which would do credit to any city. "A handsome new court-house of gray stone is being built, and when completed, will be the finest building in the city. Near by and on higher ground the new addition to complete the Episcopal Cathedral is

nearly finished. On higher ground beyond, the Roman Catholic Cathedral with its two towers, looks down over the city. St. Johns has no lack of churches, and this is true over the whole Island. Nearly every coast village has one or more churches and in these the Episcopal and Roman Catholic doubtless are the most numerous."

The writer of the sketch decided to return westward by boat in order to see the settlements on the south side of Newfoundland. Leaving St. Johns by train accordingly for Placentia Bay, 84 miles distant, to get the steamer, he had the pleasure of meeting Sir Robert Bond, Premier of the Colony, "a handsome and agreeable man in the prime of life," and Mr. A. M. MacKay, "who has been superintendent of the Cable Telegraph system here for many years. He has travelled extensively and I received much valuable information from him. Placentia, the ancient French capital of Newfoundland, is also historic for its connection with the Atlantic Cable." Here the Major went on board the steamer "Glencoe," a staunch steel steamer, commanded by Capt. Drake. On the westward run they passed Burin and St. Lawrence during the night, and passed at a distance of about eight miles the French islands of St. Pierre and Miquelon. On asking, says Mr. Hamilton, "if the French shore is opposite on the main land, to my surprise I learned that the so-called French Treaty coast extended from Cape Ray on the southwest coast to Cape John on the northeast coast, a distance of about 400 miles, or two-fifths of the whole coast line of Newfoundland. From this we can understand how galling this question must have been to the people of Newfoundland. Our next port of call is Fortune, a beautiful little town with a fine church and some fine buildings: then Grand Banks is reached a couple of hours later, an extensive fishing dépot. At St. Jacques, "a picturesque village, with some fine churches, stores and residences, a large quantity of barrels of flour were unloaded, all Canadian, among them the Ogilvie mills and the Woodstock mill brands."

Bellecoram, St. John's Island, and Harbor Breton, are passed in succession; then Hermitage Cove, Chaleur Bay and Balena, at which last point (well named for the business) are two whale factories, now idle. Having still a hundred miles to go westward along the indented shore of Newfoundland to reach Port au Basques and his steamer for Canada, the Major notes briefly several bays and islands. "Burgeo," he says, "is the next port to Ramea; Burgeo comprises a group of 365 islands, and the village has about 1,200 inhabitants. Our next stop was Grand Bruit, and here I was given samples of quartz and copper ore." At nine p.m. Port au Basques was reached. After some words of regret that the big island is not to-day a part of Canada, the Major concludes: "The trip to Newfoundland is a delightful one, and I hope that in the future many of our Canadian people will spend their summers in its splendid fishing and shooting grounds, and try the delightful trips by steamer on its numerous bays, inlets and rivers."

◆

AUSTRALIAN LETTER.

With the approach of spring, there is an improvement in trade, but it certainly is not phenomenal. The prospects are for a slow but steady improvement. Everything depends on the rainfall, and though during the last month it was below the average, it was sufficient and was well distributed. So far, the promise is of another good year for agriculture, dairying and wool. Sheep shearing is well under way and the new wool is of excellent quality.

The unexpected has happened, and the Commonwealth Labor Government was caught in a bit of a trap and beaten, very much after the fashion it had treated its predecessor. This is to be regretted, for it would have been interesting to have watched its efforts at making a paradise of Australia. Even in its short career, the ultra element in the Labor movement, outside of Parliament, was expressing its disappointment at its lack of fidelity to their ideals. Mr. Reid, the Free Trade leader, has formed a coalition with the leading members of the Deakin Party on the basis of letting the tariff alone, and though the ex-Premier is not in the new administration, he is supporting it. Mr. Reid has a hard task before him as some of the disgruntled Protectionists are seeking to form a coalition with the Labor Party. A new election has turned out the Government of this State. It was simply the mask of the Labor Party. The new Government has a clear majority over both the other parties, and has a good opportunity to give this State a safe administration of affairs and do much to increase the prosperity of the State.

There is now an exhibition in Sydney of the dairy products of the State. In it is a map of New South Wales divided into rain districts. I heard a prominent Sydney man point to a coastal strip and say: "There is more good land well watered in that little strip than there is in all New Zealand." He exaggerated; but even as it is, a humiliation exists in the map that the New South Welshman ought to see but does not. Out of eight million acres in this strip, less than one hundred and thirty-eight thousand have been brought under cultivation in one hundred years, and there are alleged to be twenty thousand men in the State either out of employment or so irregularly employed that they cannot get enough to maintain themselves. This State has been controlled for fifteen years by the Labor movement of one great city. It meant well, but nothing is needed beyond these facts to show how mistaken has been their policy. It is a question if affairs would have been much better had either of the other parties had free control. Neither of them had any grasp of the conditions required for the development of agricultural resources of the country. They vied with each other in passing alleged land laws which only added to the muddled system.

The Sydney Chamber of Commerce is against a preferential tariff, because it, as they allege, violates the principle of Free Trade. The other day the Premier sent a message to it to the effect that he had a report "that South Africa proposed to put on a duty of 2d. per pound on foreign meat, but only a penny on British." What should he do? The Chamber writhed between pocket and principle, but finally it resolved that without committing itself to a preferential tariff, it approved of South Africa giving a preference to British frozen meat. The Sydney Chamber is human—very. It is the same body that recommended the late Government to sign the dishonorable

contract with the Eastern Extension Cable Co. that has done so much to make the Pacific cable unprofitable.

Mr. Tait is doing good work on the Victorian railways, but he is beginning to feel the thorns that I advised him were in the rose. Already labor members are agitating against him on the ground that this imported "foreigner" does not do justice to the men, and advocating a union for common defence. The mass of the people appreciate what he is doing to make the railroads pay; nevertheless, I fear, Mr. Tait is in for an uncomfortable time. Mr. Eddy did a wonderful work for the railways of this State and everybody acknowledged it, nevertheless a labor member of party so worried him as to conduce, it is believed, to bring him to an early grave.

Sydney, New South Wales, 3rd Sept., 1904. F. W.

THE OTTAWA EXHIBITION.

The Ottawa Fair of September, as described to us by one who was there, attracted great crowds, and was the centre of admiring visitors from considerable distances. An extraordinary variety of "side-shows" characterized the Fair, and however it may have helped the receipts did not enhance the dignity of the Fair. Apart from the animals, which were sufficient in number and quality to elicit admiration from the bucolic visitors, there was not the customary variety of exhibits to attract the farmer in particular. For instance, there was not by any means the number of agricultural implements on view that one would expect, and there were but few carriages and wagons. A number of displays of furniture were made, some of it very fine. A particularly attractive and large array of skiffs was on view; also a few gasoline and other launches, and the display of automobiles was good. The manufacturers of soap had not spared pains and the Bell pianos were well advertised. All the methods so well known in other cities, the dwarf included, were employed on behalf of the tobacco and cigarettes. An exceedingly attractive exhibit was that of the Intercolonial Railway, consisting of views of the route "down by the Sea," and literature thereanent.

The exhibit of the International Portland Cement Co., Ltd., attracted a great deal of attention. This company is erecting a cement plant on the most modern system at Hull, Que., and the purpose of the exhibit was to direct attention to this, as well as to give the public an idea of the many uses of Portland cement, as applied to general building purposes. The process of making Portland cement by their system was fully explained. Here were also displayed samples of briquettes and boiling tests, showing uniformity of quality. In front of the exhibit were displayed roofing shingles, made out of cement, a chimney with cap complete, made of cement, and afterwards subjected to a fire test to show its fireproof qualities, and a wall fifty feet in length with circular bay window, erected entirely out of hollow cement blocks. The machine making these blocks was shown in daily operation, and also the method of coloring blocks to imitate sandstone. This portion of the exhibit was of such interest that since the Fair the company have been in receipt daily of requests to supply these blocks for private residences. A large machine shop, the Ottawa Steel Casting Company, is being erected in Ottawa out of this material.

QUEBEC WHOLESALE GROCERS' GUILD.

It has been in contemplation for some little time to form an association of the wholesale grocers of the province of Quebec. Accordingly a representative meeting of the wholesale grocers of the province was held in Montral last week. There were present Messrs. L. E. Geoffrion, president of the Montreal Guild; D. L. Lockerby and Albert Hebert, Montreal; Archibald Miller, P. J. Bazin, J. B. E. Letellier, A. Carrier and C. E. Langlois, Quebec, and A. Allard, Ottawa. The preponderance of French names is quite a feature of this list. The Mayor of Montreal, Mr. H. Laporte, Martin & Co., as president of the Dominion Guild, welcomed the representatives from other cities. The result of the gathering was the formation of the Quebec Provincial Wholesale Grocers' Guild, with a membership of twenty-five large firms of that province. The Guild is composed of the local guilds of Quebec, Montreal, and Ottawa, and is subject to the Dominion Guild, composed of the several provincial guilds. Mr. L. E. Geoffrion, Montreal, was elected president; Mr. P. J. Bazin, Quebec, first vice-president; Mr H. A. Bate, Ottawa, second vice-president, and Mr. J. Stanley Cook, Montreal, secretary and treasurer. It was the privilege of the members of the Montreal Guild to entertain the visiting grocers at an informal dinner at the Canada Club.

ANSWERS TO ENQUIRERS.

J. S. B., Stratford.—You can always find the weekly cheese and butter shipments from Montreal in the navigable season by looking at the dairy products item in our Montreal Market report. Sometimes we reproduce the figures in our "For Grocers'" column, but not always.

Stockholder.—Have written you replying to one of the questions you ask. With respect to the others, we learn, upon enquiry, that the National Portland Cement Company, at Durham, Ont., is in full operation and turning out from 900 to 1,000 barrels of cement per day, and the management expect to market 160,000 barrels during the 1904 season. They have been obliged to refuse orders recently, and have taken some of their salesmen off the road. At the last annual meeting there was some dissatisfaction expressed at the report brought in. A break-down of a portion of the machinery cost the company some $20,000, and they suffered from the railways being unable to deliver thousands of barrels of their cement, because of the severity of the winter. Moreover, there was no dividend. Our belief is that in spite of delays and drawbacks the company will yet succeed. Opinion is divided as to whether it is over-capitalized. It is claimed that it has expended not only $500,000, but more nearly $750,000 in plant. And then the president got a large block of stock for his experience and supervision. The secretary is John Ehrhardt, Durham.

F. C., Winnipeg.—For the most part in April or May. The Bank Statement shows you the dates.

—We note that the Vancouver School Board urges the amendment of the Public School Act so that trustees be given power to purchase text books at the lowest rates and sell them at cost to pupils attending the schools, or, if advisable, to furnish them free. Without going so far as this in the matter of cheapness, or of freedom from all cost whatever, it seems to us it would be a good plan for the teachers or other officials of rural schools of Ontario to keep a stock of text books on hand from which to supply the pupils at cost price or otherwise. At present, the children have to purchase them for themselves at various bookstores, and difficulty and confusion are sometimes experienced in obtaining the right ones.

—Major Moodie has reached Ottawa, after an extended trip through Hudson's Bay region, in order to establish the authority of the Dominion Government. He reports that properly constructed vessels should have no trouble in getting through Hudson's Straits in and out of Hudson's Bay from June to about the 10th of October. He was not able to get out of the Bay this season till July 18th, the spring this year being exceptionally late. He says that neither cod, herring nor mackerel is found in the waters of Hudson's Bay, although the coast abounds with salmon trout and Arctic salmon. The coldest point that the thermometer registered last winter at Fullerton, where the expedition wintered, was 53 below zero. This was in March. Before he left Hudson's Bay, in July, the temperature had already climbed as high as 67. Whales were reported to be scarce. Last year whalebone was worth $10,000 a ton. This year the price is said to have gone to $15,000 a ton.

Mercantile Summary.

The Queen's Hotel, at Meaford, Ont., has been destroyed by fire at a loss of $10,000; partially covered by insurance.

The Dominion Coal Company has made a shipment of an experimental cargo of 400 tons of coal to Mexico, to be tested on the Inter-Oceanic Railway.

For manufacturing 150,000 bottles of "wine" out of chemicals and exporting it as Hungarian wine, the firm of Abels & Sons, Budapest, has been fined £11,500.

The steamship "Taff" has sailed from Annapolis, N.S., for Hull, Eng., with a full cargo of apples (more than 8,000 barrels). She will be followed by the steamer "Ely," which will sail October 12th. The steamers are specially fitted up for the carriage of fruit.

The firm of Baillie Bros., bond and investment brokers, recently of 10 King St. West, Toronto, have moved into new offices in the Canada Life Building. This move was caused by the fact that the Toronto Daily Star intends to erect on the site at 10 King St. West a modern office building.

In four years the number of motor cars taxed in France has increased from 2,897 to 12,984. In the same lapse of time the total number of horses in the country has decreased by nearly 22,000, the present figure being 1,246,000, while that of horse-drawn vehicles has diminished by no less than 245,475. But there are still 1,875,554 of them in use.

The annual meeting of the Canada Atlantic Railway Company was held in Ottawa last week, and the old board re-elected, as follows: Messrs. C. J. Booth, William Anderson, John Christie, J. F. Booth, N. McIntosh, J. A. Seybold, and C. W. Mitchell, all of Ottawa. Mr. C. Jackson Booth will be re-elected president, and Mr. William Anderson, vice-president. At a meeting in London, on the 29th ult., of the shareholders of the Grand Trunk Railway Company, there was a somewhat heated discussion on the question of purchasing the first-named road, a resolution to buy it was finally carried.

What appears to be an important company is the Northern Construction Company, Limited, of Toronto, chartered by the Government to purchase the business of Mackenzie & Mann. The provisional directors are: Alex. R. Mann, Archibald C. McKenzie, W. H. Moore, Fred. Annesley and Albert Mitchell, and the capital is $200,000. Other charters granted are to the Canada Coating Mills, Limited, of Toronto; capital, $100,000; provisional directors: John R. Barber,, Georgetown; Edward Trout, John Waldie, and Robert Kilgour, of Toronto, and Charles Schumacher, of Kalmazoo, Mich.; the Hurndall Novelty Furniture Co., Limited, of Toronto, $40,000; the Nipissing Foundry and Machine Co., Limited, of North Bay, $20,000; the Hamilton Biscuit and Confectionery Co., Limited, $100,000; provisional directors: W. H. Schneider, T. W. Hand, R. A. Ptolemy, and W. H. M. Williams. A charter is granted to A. J. Young, Limited, of North Bay, general merchants, capitalization, $100,000.

—Candidate (on arriving at Plunkville to fill an appointment): Are there any evidences of campaign enthusiasm here? Local Politician: Nothing to speak of. The other fellows hanged you in effigy last night, but I believe that's about all.—Chicago Press.

◆

—"Bulls" are naturally in evidence where Irishmen converse. Here is a delicious comment on the state of Ireland: An Irishman was declaiming against the injustice done to his country, and instanced absentee landlordism as one of the worst. "But," said one of his listeners, "that evil has been considerably remedied in recent years. There are not as many absentee landlords now." "Sorr," was the reply, "the country swarms wid 'em."

MANITOBA

PROPERTY OWNERS

Residing in Ontario will find in the Corporation a prompt, efficient and reliable agent for looking after their interests at reasonable rates.

The Corporation's branch at Winnipeg is particularly well equipped to undertake the sale of real estate, collection of rents, payment of taxes, etc.

Mercantile Summary

A despatch of Saturday last from Cleveland, Ohio, announced that the wages of all the seamen employed on the Great Lakes, numbering upward of 10,000, would be advanced from 10 to 25 per cent. Oct. 1st. This advance is in accordance with an agreement reached last spring.

The United States Steel Corporation is opening an office in Montreal, and will place therein one of its own men, thus doing away entirely with agents and commission men. We do not know whether the report that the corporation will start a branch factory in Canada is also true.

The Egerton Tramway Company, composed mainly of Halifax and United States capitalists, has just completed the building of an electric road from Stellarton to New Glasgow, and Trenton, N.S. The road-bed is said to be first-class, and the equipment excellent. This is the first electric railway in Pictou County.

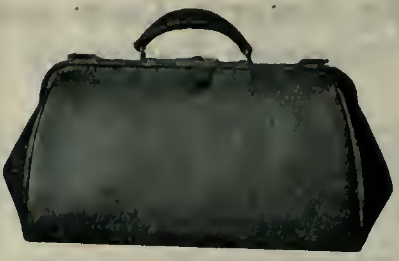
A very marked saving in grade on the mountain section of the Canadian Pacific Railway can be effected by a tunnel through part of the Selkirk Mountains at Rogers' Pass. And it is understood that the company will construct a tunnel through the mountain between Glacier and Bear Creek. The tunnel would be about three miles in length.

The Knox Church property, running from Queen street West to Richmond street West, has been sold to the Robert Simpson Company, the price, it is understood, being $1,500 per foot, or altogether a little over $200,000. The transfer will be made in 1908, and in the meantime the congregation will build a new church near Bloor street.

A company has been organized, under the name of the Great Northern Lumber Company, to engage in the lumber business in the Canadian West on a large scale. Branch offices are to be established along the main line of the Canadian Northern Railroad. The first president of the new company, which is capitalized at $100,000, will be H. J. Haskamp, of St. Cloud, Minn.

There is being installed in Cranbrook, in the Crow's Nest Pass, a water supply system estimated to cost $30,000 and to be ready for operation in November. The municipality is issuing $10,000 debentures to help pay for them, repayable at intervals, rate, six per cent. Cranbrook is one of the new towns of British Columbia, has from 2,000 to 2,500 people in it already, and is likely to grow. It is a C.P.R. divisional point.

A company has been formed in Victoria, B.C., to establish works on Sechart Island, near the mouth of the Alberni Canal, for the purpose of converting whales into fertilizer. Whales are to be procured in the water off the coast, where they are said to be plentiful. A schooner is being specially built in Norway for the purpose of catching them. The oil will first be extracted, and the remainder of the body of the animal converted into guano. Those interested are prepared to invest $50,000 in the enterprise, it is said.



BRIEF BAGS
When you see a man carrying a very fine JULIAN SALE bag it does not mean that it was expensive — the chances are that he paid less for it than if he had bought an ordinary bag. Here is our brief bag proposition:
For $5.00
we give the regular 18 inch size in the finest natural grain leather, sewed in frame with trimmings that will not tarnish. Heavy leather linings.
For $6.00
18 inch bag, wider than usual, and heavy frame.
For $7.00
18 inch bag, deeper and wider, with heavy frame. Gold lettered without charge. — Express paid in Ontario.
The Julian Sale
LEATHER GOODS CO.,
LIMITED

—Mr. Charles H. Coffin, secretary of the German-American Insurance Company, has been on a visit to Montreal, Toronto, and other cities, with a view to an extension of that well-known company's fire business with this country. So far, we understand, no decision has been arrived at as to whether a branch will be established here or merely the business managed from New York, with the assistance of a field force on the spot.

An extensive new plant is nearing completion on the works of the International Coal and Coke Company, at Coleman, in Crow's Nest Pass. It is designed to handle a daily output of 2,000 tons of coal. A battery of 104 coke ovens is now installed, and coke is being shipped to British Columbia smelters. Already the company has extracted 35,000 tons of coal from No. 2 seam into which it is now at a depth of 2,000 feet.

A Dominion charter has been granted to the Compagnie Generale d'Entreprises, Limited, Montreal, nominal capital, $1,000,000. Its object is to contract for and build public works for the Dominion or Provincial Governments and for other parties, to acquire timber lands and operate saw and pulp mills. Among the charter members are: Felix Allard, contractor, of Paris, France, and J. Nyssens-Hart, railway manager of Brussels, Belgium.

Mercantile Summary.

The Massey-Harris Company, Toronto, has purchased the plant and business of the Kemp Manure Spreader Co., in Stratford, Ont., and will enlarge the works.

A World's Fair is to be held next summer, at Liege, Belgium, and the Dominion Department of Agriculture will probably make an exhibit of Canadian products.

The municipality of Delorimier (Montreal), will borrow $50,000 to be used in macadamizing and grading new streets, and constructing sidewalks, laying down water pipes, etc.

The American Hotel, at Fort Erie, Ont., and two or three other buildings close by, have been destroyed by fire, supposed to have been of incendiary origin. Total loss about $13,000.

The Continental Contracting Company, Limited, of Ottawa, capital, $500,000, has received a charter from the Dominion Government. George Alex. Brown, of Ottawa, is among the members.

The Chatham Pulp and Paper Co., Limited, of Lachute Mills, P.Q., capital stock, $200,000, has been incorporated. James T. Griffith and T. H. and J. T. Ayers, all of Lachute Mills, are among the parties interested.

The Ontario Independent Telephone Company, Limited, capital stock, $100,000, headquarters at Windsor, Ont., has been authorized by the Ontario Government to carry on business. C. W. Taylor and J. A. McRae, of Detroit, are interested in the venture.

We hear that the Canadian Pacific Railway Company has awarded a contract to the Consolidated Lake Superior Company, Sault Ste. Marie, Ont., for 40,000 tons of steel rails, delivery to be made at the rate of 10,000 per month, beginning with next February.

The chief engineer of the C.P.R., Mr. W. F. Tye, has been telling a reporter of an important work on the Western part of that road, viz.: The reduction of the gradients between Swift Current and Moose Jaw, and between Winnipeg and Fort William. The grades have been reduced from 50 feet per mile to 20 feet per mile or more than half. The effect of that is to double the haulage capacity of an engine.

Mr. J. C. Coley-Bromfield, of Brighton, Eng., who represents English capitalists, is said to have obtained several options on Canadian charters and other properties. Included among these is one for a railroad from Dryden, in the Rainy River district, to Lac Seul, and the promoter's idea is to settle a large number of agricultural immigrants on the land given as a bonus. Other options obtained are upon some clay and marl deposits near Lindsay, on a short line from Halifax to Gaspe, a concession granting the right to obtain water from Lake Simcoe for developing electrical energy. A syndicate is being organized under British regulations, known as the London and County Trust, with a capital of £1,000,000, and borrowing capacity of £500,000.

the size made and used in New York and Paris, and put up in 50 and 100 lb. boxes.

The new C.P.R. hotel at Winnipeg will not be ready until 1906. But the station, subway, and freight sheds, are to be completed in 1905. In fact, the subway is almost ready now, and the alteration of the tracks in and near the city is shortly to be begun.

The ratepayers of Waterloo, Ont., have voted in favor of granting a loan for fifteen years of $15,000 to aid in the rebuilding of the furniture factory which was recently burned down, and also of raising $20,000 for the purpose of purchasing the present gas plant and extending it.

We were the other day looking at a little illustrated brochure of the International Portland Cement Co., Limited, Ottawa, in which there was a diagram setting forth with admirable preciseness the marvellous growth of the use of cement in this country during the past decade or so. The diagram portrayed twelve barrels of increasing size, proportionate to the increased consumption of this article. In 1892, the quantity of cement used in Canada was 215,542 barrels. In 1898 it was 556,797 bbls., which had increased by the next year to 768,303 barrels. In 1902 it reached the high total of 1,285,844 barrels, which last year improved to 1,496,507 barrels, of which quantity rather more than half had to be imported.

A London cable represents Sir Christopher Furness as saying at the annual meeting, on Friday, of the Manchester Liners' Company, that with respect to the unprofitable result of the year, it was well to bear in mind the causes which had led to that unfortunate trading, particularly with Canada. During the second half-year they suffered in their Canadian North Atlantic trade very severely, but they were not alone. One company, larger but not more energetic, lost £253,000, against their £20,000. Referring to preferential tariffs, Sir Christopher asked how was it that steamers from Manchester to Canada could only earn practically, in round figures, £300, while if the company sent their vessels to Hamburg and Antwerp, they could earn three or four times that rate in freight, in spite of the fact that Canada gave Britain preferential treatment.

Figures presented by the Department of Commerce and Labor show the total importations of wool at Boston, New York and Philadelphia to have reached a total of 170,401,040 pounds during the fiscal year ended June 30th last. This is the highest quantity for any of the past seven years, with the exception of 1903, when the importations of wool amounted to 171,994,458 pounds. By far the greatest quantity was brought into Boston, with New York next and Philadelphia third. As to the sources of supply, the largest quantity, namely, 28,168,060 pounds, came from Argentine, while the United Kingdom was next with 26,807,042 pounds, followed by British Australasia with 25,792,098 pounds, China with 24,912,491 pounds, Russia with 23,403,797 pounds, Turkey with 17,742,473 pounds, British India with 10,088,556 pounds, Uruguay with 112,208 pounds, and "all other countries" with 13,374,315 pounds.—Dry Goods Economist.

CANADIAN FLOUR IN JAMAICA.

It is satisfactory to learn, on the authority of Mr. G. Eustace Burke, Canadian commercial agent in Jamaica, that prejudice that formerly existed against Canadian flour, on the ground that it was unsuitable to the climate, going "off" shortly after arrival, is now a thing of the past, and Canadian flour now enjoys equal favor with that from the United States, which is the only other source of supply. Regarding the volume of imports, however, Canadian receipts occupy, proportionately, an insignificant position, and it is from such an important item in the list of possible articles for export on a large scale to the West Indies that it is perhaps worth while quoting his suggestions to Canadians as to how to increase the trade.

Canadian millers must first, he says, realize that the market is worth capturing, and especially catering for. They must be prepared to reasonably meet the views of those capable of successfully handling shipments, and comply with the requirements peculiar to the trade; be prepared to take the customary commercial risk of progressive producers and manufacturers desirous of successfully placing their products on a new market, by first shipping on consignment; thus, appointing reliable and energetic selling agents on a consignment, f.o.b. or c.i.f. basis, and as with flour so with other commodities; be prepared to fill orders, avoiding unnecessary, and in some instances, irritating delays; and not supplying "something just as good," or yet, something "superior," in supposed satisfaction for what is actually ordered, but to religiously, and as ex-

CANADIAN WEST INDIA STEAMERS

Sail from Halifax for Bermuda, The Windward Islands and Demerara every other Monday, and for Jamaica once a month.

The demand for Canadian goods in West India markets is constantly growing, and prospective exporters should inquire as to freight rates by this line.

PICKFORD & BLACK,
HALIFAX.

peditiously as possible, comply with the strict letter of the indent as to grade, brand, etc. Repeat orders for respective brands must be uniform in grade, comparing favorably with their predecessors. The grades in demand are what are known as "supers" or "straights," "90 per cent. patents," "strong bakers," and "75 per cent. patents," answers to similar United States grades on the market, the proportion of demand being in the order mentioned. It should be packed in barrels of 196 pounds net. The barrels should have a slight bilge, as of the United States type, broad hoops being preferred. A special trade brand, denoting grade, etc., should be attractively denoted on head, with the net weight.

◆

THE MANUFACTURE OF PEAT.

We are pleased to hear that the extensive peat plant, which is being erected at Caledonia Springs, Ont., by Mr. Alexander Dobson, of Beaverton, is almost completed. The field appliances were placed upon the ground last week, and the plant is reported to be daily taking in a large amount of dried peat. In the course of about two weeks it is expected that the presses will be installed, and that the pressing of briquettes will be commenced. The Beaverton plant has been in operation for four years, and has been successful. At the time of the scarcity of Pennsylvania coal, in October, 1902, the Monetary Times referred to Mr. Dobson's peat-making process as one of great importance to us. He can furnish and has furnished peat briquettes at from $4 to $4.75 per ton on track at various Ontario points. And this is a sort of fuel to which more attention is certain to be paid in the future.

◆

RAINY RIVER BOARD OF TRADE.

On the 23rd September, there was a large and representative meeting of the merchants and business men of Rainy River, Ont., called for the purpose of considering the question of forming a board of trade. It was decided to organize a board, and forty names were enrolled as members. J. A. Mathieu, manager of the Rainy River Lumber Co., was unanimously elected president; J. G. Clark, customs officer, was elected vice-president, and T. A. Love, editor of the Gazette, secretary-treasurer.

AMERICAN NEWSPAPERS.

The opinion of Sir Alfred Harmsworth, proprietor of the London Daily Mail, upon American newspapers is rather interesting. He considers that in point of profit-making, the New York field is a sample of competition gone mad. "More money is lost in that city by newspapers each year," he says, "than I would care to count. The spectacle of so great a number of business people engaged in thrusting on the public every morning and evening tons of paper for which they pay at least two and a quarter cents a pound, and which they send forth in a form that must bring a loss in each individual copy, astonishes me. In truth, I see no development or improvement in the newspapers here since my visit to New York three years ago. We may have much to learn on the other side in the management of the press, but you have more to learn in conducting newspapers as business propositions. There are exceptions here, but, as a rule, the extravagance of management, the lavish output of paper and practically the unrestricted distribution of unsold copies make one wonder if the American genius for business has not departed from the newspaper field. Generally speaking, it is not true that a large number of American newspaper publishers have made great fortunes. Profits in England, with a very few exceptions, are much larger than here. John Bull is slow, apathetic, but he is not giving away two cents for one cent."

◆

TORONTO MARKETS.

Toronto, Oct. 6th, 1904.

Chemicals, Drugs, Etc.—Opium is quiet, but steady. Quinine is holding its firmness, consequent upon the higher prices realized at the London bark sales. No large amount of actual business is being done, however. Camphor is quite firm. The New York market shows little change. British advices speak of a dull trade both for home and export requirements. Prospects are said to be fairly bright, however, for the future.

Dry Goods.—An average volume of trade is passing, and the indications noted by travellers on their rounds seem to point to a continuance of such conditions. As to prices they continue steady for the staple goods, particularly woolens. Regarding cotton goods, the uncertainty continues, and until it becomes more definitely known exactly what position the raw material market will occupy, it is of no use laying down dicta which any week may prove more or less misleading. There is a good demand for dress goods of all kinds, but the home-made article seems to be retaining its popularity well.

Cement.—The demand just now is a little slow, as usual at this season of the year, and as a partial consequence of strikes in the building trades. National Portland cement, made at Durham, brings, we are told, $2.25 per barrel at retail, in Toronto. The mill is said to be running at its full capacity and to be refusing orders.

COWAN'S
Cocoa, Chocolate and Cake Icings
Are the Standard of Purity and Excellence.

Flour and Grain. — No appreciable change has been made in the flour market for some days, though its general position continues strong. For ninety per cent. patents, the prices quoted is $4.40 in buyers' bags, east or west freights. The demand for rolled oats is on the slack side. No change is to be noted in millfeed. Ontario wheat has dropped 1 to 2c., and is dull at the decline. Other grains continue unchanged. Little or no business is passing.

Fruits and Vegetables.—As may be expected at this late season of the year, receipts of fruit are becoming much lighter. The quality also is poorer and prices are easier. Grapes are fairly plentiful. Prices are quoted as follows: Peaches, white flesh, basket, 30 to 45c.; peaches, yellow, 40 to 75c.; peaches, Crawfords, 75c. to $1.15; apples, barrel, $1 to $1.75; crab apples, barrel, $3.75; pears, 20 to 35c.; pears, open basket, 40 to 60c.; plums, 65 to 75c.; Canadian cantaloupes, 24-quart, 35 to 50c.; grapes, Moore's early, 25c.; grapes, Delawares, 30 to 60c.; grapes, Concords, 20 do., per box, $3; oranges, Jamaicas, box, $3.50 to $8.50; lemons, Messinas, $3 to $3.50; do., Verdillis, $4; do., St. Nichols, $4; bananas, 1sts, bunch, $1.25 to $1.75; do., 8's, bunch, $1.10 to $1.25; do., red, $1.50 to $2.25; California peaches, $1; Tokay grapes, $1.50 to $2.50; tomatoes, 20 to 30c.; cucumbers, basket, 20c.; green peppers, basket, 20 to 30c.; red peppers, 40 to 50c.; egg plant, basket, 20 to 25c.; Can. green corn, doz., 8c.; Canadian celery, doz., 40 to 60c.; sweet potatoes, $3 to $4; Spanish onions, $3; do.. small case, $1.

Groceries.—A fairly good seasonable trade is going on, but there is very little in the way of special features worth noting. In sugar the movement is about average for this time of the season, and prices continue stiff in sympathy with New York conditions. Prices have been issued for California prunes; they range, as a rule, rather lower than they were. New tomatoes are quoted at $1.15. They and corn are both very strong in price on account of early frosts. There is but a quiet demand for teas.

Hides, Skins, and Leather.—Quietness reigns in the market for hides, just as in Chicago. Very little business is doing. Lambskins are steady, but there are plenty of receipts at 65c. Tallow is firm. The trade in leather is rather slow, though prospects are said to be improving.

Provisions.—Good choice butter is in pretty fair demand, but other qualities are neglected. Cheese remains at about the same figure as quoted last week. Receipts of eggs continue quite light. Not much poultry is coming in, and spring chickens are quoted at 11 to 13c., while old birds are about 9c. Ducks are quoted 9 to 10c. Stocks of hog products are light, and prices good.

Wool.—Not very much business is passing, but this is due probably to the fact that but little material remains on the market. Both here and across the line the demand has been keeping good, and prices show little unsteadiness.

Mercantile Summary.

The firm of Craig & Stairs, general dealers, of St. Andrews, N.B., are reported failed. Liabilities are stated at $3,600, with assets of $4,365, but largely nominal.

The Richelieu and Ontario Company have been successful in raising the wreck of the steamer "Canada," which was sunk in Sorel harbor. The wrecked steamer will be taken to the Davies' dry dock, at Quebec, for overhauling.

From Quebec is reported the failure of the North American Paper Box Co., a style adopted by H. N. Gourdeau, whose wife is the registered legal owner. The liabilities are $2,800, of which $1,600 is preferred, and general creditors will likely get very little.

During the first six months of this year the Grand Trunk used 4,434 cords of wood and 651,475 tons of coal in its locomotives. January saw the heaviest consumption of fuel, when 844 cords of wood and 126,513 tons of coal were burned. This was owing, no doubt, to the severity of the weather throughout that month.

The city of Montreal will this year receive from the Street Railway Company, in percentages, the sum of $127,483, the largest on record. Last year the amount was $106,341. The question as to whether the city is entitled to obtain a percentage on the company's earnings in outside municipalities is still undecided, and it will probably be settled by the courts. The gross earnings for the current year were $2,407,129.

On Tuesday evening last the steamer "Admiral," 420 tons, which had been running on Baie des Chaleurs, between Dalhousie and Gaspe coast ports, took fire in the harbor of Montreal and sank. She was valued at $35,000. The insurance on her was very light. There was no cargo on board. The "Admiral" was cleared at the customs house Tuesday, and was to have sailed for Quebec on Wednesday. From Quebec she was to have sailed to Gaspe to go on her regular route.

A dividend of two per cent. on the preference shares of the Nova Scotia Steel and Coal Co. for the September quarter has been declared. Also an interim dividend of three per cent. on the ordinary shares. We learn from an announcement made last week by the president that a special meeting of the shareholders is to be held to-morrow for the purpose of authorizing the issue of $3,000,000 worth of 6 per cent. consolidated mortgage, 25-year gold bonds, and of taking steps to cancel the 9,700 shares preferred stock still unissued and in the treasury of the company.

A voluntary assignment has been made by A. C. Dionne, grocery and hardware dealer, Montreal, who was previously unsuccessful in 1897, on which account he has since been doing business, under cover of the name of Miss Octavie Casgrain.——Daoust & Frere, suburban grocers, at Montreal, have assigned, owing about $1,500.——Misael Jodoin, dealer in men's furnishings, Montreal, recently insolvent, is offering his creditors 40 cents.——E. L. Ethier & Co., Montreal, dealing in billiard supplies, have assigned. Mr. Ethier has been many years in the business, but has had frequent reverses, having failed in his own name, also while making use of the names of his wife and his father, and latterly he has done business under cover of his son's name.

A. Charlebois, who came from Laprairie and opened a general store at Boucherville, Que., in March, 1903, has been sued several times of late, and has now consented to assign upon demand.——Charron & Roy, general dealers, of Bromptonville, Que., recently insolvent, have arranged with creditors to pay 30 per cent. cash, on liabilities of $7,400.——G. F. Croasdale, formerly a railway clerk, at Moncton, N.B., started storekeeping at Cross Point, Que., little more than a year ago, and has already assigned.——The Joliette firm of Dugas & Geoffroy, dealing in groceries mainly, have become insolvent. They entered into partnership in April, 1903, prior to which Geoffroy had been a farmer, and Dugas had been clerking. They are said to owe about $5,000.——The failure is noted of C. A. Cunningham & Co., general merchants, of Bedford, Que., at which place they had been in business since June, 1903. They had previously carried on business for a short time at Huntingdon, Que.

A convenient publication for those interested in stocks is the compilation by Towle & Fitzgerald, of Post Office Square, Boston, of dividend-paying stocks. The firm offers to forward a copy on receipt of postage. Turning, for the information of a friend, to the column of railway stocks, we selected Canada Southern, and here is what the pamphlet says about it: Stock outstanding, $15,000,000; par 100; current market price, 15th September, 69; yield per cent., 3.62. Leased, January 1st, 1903, to Michigan Central Railway for 999 years for guaranteed dividends, 2½ per cent. until after 1910, after which the rate is to be 3 per cent. Dividend declared in 1902 was 2½; in 1903, 2; and for nine months of the present year, 2¾ per cent.

Full Information Freely Given.
A. G. C. DINNICK, Managing Director.

Mr. P. W. Ellis, chairman of the Ontario Power Commission, told the Toronto Star yesterday that: "The Ontario Power Commission's report will probably be completed in about six months, and will be a very interesting report. Twenty-dollar power will, I believe, be a feature of it."

In May, and again in June last, Mr. Haultain, Premier of the North-West Territories, wrote to Sir Wilfrid Laurier about autonomy for the Territories, and declaring that they are entitled to eighteen members instead of ten. In reply, Sir Wilfrid informed Mr. Haultain that if the Government were sustained they would be prepared immediately after the election to enter upon negotiations for the purpose of arriving at a settlement of the various questions involved in the granting of provincial autonomy, with a view to deailng with the subject at the next session of Parliament.

—The annual meeting of the Granby Consolidated Mining, Smelting and Power Company took place in Montreal on Tuesday last. Mr. S. H. C. Miner, who has been president of the company since its inception some seven years ago, was in the chair, but stated that while he had every faith in the company's future, he would have to forego the acceptance of any official position. The treasurer's report, showing a profit of $283,000 for the year ending June 30th last, was considered somewhat disappointing, the conditions prevailing a year ago seeming to promise better results. However, considerable additions have been made to the working plant. Mr. Miner, as we understand matters, will retain his large financial interests in the company, but a controlling share has been obtained by New York capitalists. The new board of directors will be as follows: John Stanton, W. H. Nichols, J. Langeloth, George Martin Luther, Geo. C. Clark, Arthur C. James, George F. Baker, and Payne Whitney, all of New York; W. R. Higginson, of Boston; W. H. Robinson, Granby, P.Q.; Jay P. Groves, and A. L. White, of Spokane, Wash. The head office will be transferred to Grand Forks, and a branch office opened in New York City, the office in Montreal being closed.

Preventative legislation was the subject which opened the discussion at the

second day's session of the International Congress of Tuberculosis, at St. Louis, on October 4th. The speakers told of ways and means that might be enforced through legislation for the prevention of the infection and spread of consumption, and dealt with legislation compelling state and national governments to inspect with care not only public buildings and vehicles of transportation, but also tenement districts, and schools. It was also advanced that beneficial results would be attained by the segregation of the tubercular insane in asylums and hospitals.

We received at five last evening the following report concerning failures from the Mercantile Agency of R. G. Dun & Co.: Statistics of insolvencies for the Dominion of Canada make a much less satisfactory exhibit than last year, but compare favorably with two out of four of the years immediately preceding 1903, making on the whole a fair average for the last six years. In number there were 910 failures, and liabilities aggregated $8,988,140, when compared with 721 last year for $5,332,611. It must be remembered, however, that 1903 was a phenomenally prosperous year in Canada. Manufacturing failures were 225 in number, and $3,643,261 in amount, against 167 for $2,090,744 in 1903; trading insolvencies numbered 665 and involved $5,060,986, which compare with 538 failures and $3,090,072 liabilities a year ago; other failures were unimportant in both years, except for a few large banks in 1903. Losses in Ontario were slightly larger than in Quebec, while British Columbia and Nova Scotia were unusually close together in this respect.

Failures in Canada—Nine Months, 1904.

MONTREAL MARKETS.

Montreal, 5th Oct., 1904.

Ashes.—Offerings of potash are still small, and $5.90 would be paid for good lots, ordinary tares ranging from $5.75 to $5.85; seconds, $5.40 to $5.45. Pearls would bring $7.75 to $8 per cental.

Dairy Products.—There are evidences of dullness in the cheese market. The English demand is slack, and impressions are that a very considerable sale of stock must be going on here. Probably 9⅛c. would now be an outside figure for finest Ontarios; Townships, 8⅞ to 9c.; Quebecs, 8¾ to 8⅞c. per pound. Shipments last week were 89,159 boxes, which is nearly 20,000 boxes less than for corresponding week of 1903. The butter market is also heavy in tone, with slow demand from English buyers. Finest Township creameries are quoted at 19¾ to 20c.; Quebecs, 19¼ to 19¾c.; dairy, 15 to 15½c. per pound. The exports in this line last week were fairly large, aggregating 19,826 boxes, as against 16,442 boxes at date last year.

Dry Goods.—As far as can be judged, customers' paper falling due on the 4th instant were fairly met, though full returns from outside points are not to hand at the moment of writing. The aggregate of business for September shows up rather better than was anticipated, and commercial travellers are reported as sending in fair orders for spring goods, with a moderate proportion of sorting business. City retailers are praying for a spell of settled fine weather, as the atmospherical conditions of late have not been of a character to bring out shoppers in any great number. It is reported that wholesale dealers are now placing some good orders with the mills for spring cottons.

Groceries.—The canners' combination has announced prices for new pack of tomatoes and corn, quoting $1.15 for the former, and $1.10 for the latter, as against $1.02½ and 90c. last year, quite a material difference, as will be noted. Another week has passed without change in sugar prices, standard granulated remaining at $4.65, with yellows ranging from $4.05 upwards. Molasses is firm at 28c. per gallon for single puncheons. Patras advices report an easier market for currants, owing to fluctuations in exchange, and the fact that owing to the smallness of the crop the Greek Government has ruled that it will not be necessary for the Currant Bank to operate. In Sultana raisins the high prices have curtailed the demand, and market is in buyers' favor, notwithstanding the fact that the crop is a comparatively light one. At Malaga it is said that rains have somewhat interfered with the curing of the crop, and the market is firmer. Prices for new dates have opened in London at about last year's figures.

Hides.—Lambskins in this market are advanced this month to 80c. each. Hides are steady at former prices, with receipts readily absorbed by tanners' demands.

Leather.—The week has developed little in the way of news. Boot and shoe manufacturers are buying in moderation of sole and dongolas; business in black leathers is comparatively dull, but a fair outlet is found for splits in export to England, where satisfactory prices are being realized. Quotations remain steady at last week's figures.

Metals and Hardware.—There is more doing in heavy metals, but orders as a rule continue to be of a moderate character, and business is hardly up to the fall standard. The same is practically true of general hardware. Ingot tin continues to show considerable firmness, and is quoted at 31 to 32c. in an ordinary jobbing way; lead also firm at $3.25 to $3.30, and copper at 13¾ to 14c.; spelter, $5.75 to $6; sheet zinc is strong at $6.25 to $6.35 in cask lots. Tinplates are steady at $3.65 for cokes, and $3.90 for charcoals of standard brand and weight; Canada plates, $2.25 to $2.30, some holding firmly for the latter figures; galvanized Canadas, $3.90 for 52 sheets, and $4.10 for sixties; black sheets, $2.20 to $2.25 for 28 gauge; Ternes, $6.25; galvanized sheets, $4 to $4.25. Boiler plate is sold at unchanged figures. Iron pipe, $4.20 for inch, but fair orders would induce some shading. Pig and bar iron show no change.

Oils, Paints and Glass.—Orders are coming in a little better, but the volume of business is a good deal short of last year's figures. The firmness in window glass is fully sustained, Belgian makes of ordinary grade being quoted at $3, and English at $3.65 to $3.75 for first break per 100 feet. Turpentine is steady at 81½c. for single barrels; linseed oil, 43 to 44c. for raw. Fish oils show a slow movement at last week's prices.

◆

DECISIONS IN COMMERCIAL LAW.

Before the Ottawa court on Friday and Saturday last, there was tried an action for libel, brought by J. Casling Kelly against the Ottawa Journal, damages laid at $20,000. The article complained of was published in February last, being copied from the Rialto, a paper printed in London, England. This article reflected on Mr. Kelly's connection with the floating of some companies in the Old Country, condemned his company-promoting methods, and alleged fraud. Among these companies were the English-Canadian Company, the Canadian Pulpwood Company, and the Sapphire Corundum Company. The Journal refused to apologize, hence the action. Mr. Aylesworth appeared for the plaintiff, and Mr. G. L. Henderson for the defendant company. The verdict was in favor of the newspaper, and it is said that the jury stood eleven to one in favor of the defendant. The plaintiff, Mr. J. Casling Kelly, is indignant, claiming that the charge of Mr. Justice Britton was strongly in his favor, and that the verdict was not justified by the evidence. He declares that he will appeal. Mr. Kelly is evidently not convinced yet that the methods of the smart London promoter do not meet with approval in Canada, and that a newspaper has some rights which even a Kelly is bound to respect.

◆

IRON AND STEEL MARKETS.

The livelier pig iron market, which first appeared at Chicago some two weeks ago, has spread, and there are now reported decided gains in almost all important distributing centres, says the Iron and Machinery World. The sale of southern iron on the Atlantic seaboard during the past week was quite large and a reviving trade is common. Following as it does a period of prolonged dullness, this improved trade in pig iron is heralded with more than ordinary rejoicing. Its staying qualities have not been fully demonstrated but the present outlook is surely one of continued activity. There is practically no change in prices of pig iron, but the market is distinctly firm. There has also

been this week a broadening of the market to manufactured iron and steel. There is no longer any public discussion of probable reductions in prices, and, this advantage to the buyer eliminated, he is now ready to buy for at least his necessities in the near future. This fact has liberated a very respectable tonnage of orders and the more active market reflects that increased readiness to negotiate for material. The undertone of the market is intensely hopeful, and this factor promises to exert a strong influence on the trade of the coming months. Everyone is apparently preparing for much greater activity in the metal markets.

Recent reports from western rural districts, and especially from the North-West, where there have been the more serious reports of crop damage, are to the effect that the farmer is now in a most prosperous condition, and that he will be a large buyer during the next six months. A representative of one of the large western implement makers remarks that he has just bought sixty per cent. more material of one kind than he did for the corresponding requirements of last year. This may be an exceptional instance, but there is no doubt that the prospects for this branch of trade are bright. The railroad companies have not figured in the market extensively this week, but there are evidences that heavy purchases will have to be made at no distant date, and when a trade from

that source occurs that is adequate to the wants of the carriers, the quality of the metal market will radically change for the better.

◆

PASSING OF THE CHIMNEY.

Industrial pursuits inflict upon us many kinds of offence, and commendable as is the activity of our public health authorities, they have, of course, no power to remove offences which affect the eye. Such a power would open the door, admits the Lancet, to vexatious proceedings, and yet who shall decide which is the greatest offence, that which affects the sense of smell, of sight or of hearing? There can be little doubt that noise can be a source of ill-health just as much as evil smells, to ascribe that a blot upon the landscape is in the same degree harmful.

What can be more hideous to the sight than a forest of factory chimneys, and, after all, the chimney is man's simple but clumsy design for the creation of draught, and the landscape must be marred because the manufacturer wants an abundant supply of oxygen to feed his furnace fires. There is some hope, however, that the factory chimney may soon give way in favor of a system of forced draught. Already destructors, which have hitherto sadly disfigured many a picturesque spot on account of their ugly chimney shaft, are being constructed without a chimney.

A simple method of forced draught replaces the function of the offensive shaft, and not only is more effectual for purposes of combustion, but it reduces the immense cost entailed in constructing a chimney stack of 100 feet or so high. We may be sure that the economy of the principle will appeal to a manufacturer even if a sense of duty does not. The day may come when domestic chimneys may be done away with by the adoption of the forced draught and at length the realization of a smokeless city is suggested as a pleasant outcome.

◆

C.P.R. ANNUAL MEETING.

The twenty-third annual meeting of the shareholders of the Canadian Pacific Railway was held in Montreal on Wednesday last, Sir Wm. Van Horne, chairman of the board, in the chair. An important feature was the voting of an increase of $25,000,000 to ordinary share capital, and it was announced that $16,900,000 of this will be offered immediately to shareholders at par. The general report was unanimously adopted, and the leases of the Tillsonburg, Lake Erie and Pacific Railway, the Northern Colonization Railway Company, and the building of the Guelph Junction and Goderich Railway were ratified. The directors were also empowered to arrange for the construction of two additional passenger steamships with a speed of eighteen knots. The following directors were unanimously re-elected for the next four years: Sir George A. Drummond, Sir Sandford Fleming, Messrs. Geo. R. Harris and Wilmot D. Matthews.

Sir Thomas Shaughnessy, after referring to the generally gratifying conditions prevailing in the country served by the company's lines, gave a résumé of the changes which had been made in the latter's finances during the last three years. "Since June 30th, 1901," he said, "there has been no change in the mortgage debt, but the amount of debenture stock and share capital has been increased by $43,788,468. During the same period 769 miles of railway have been added to the system, and two hundred miles more are practically completed; the Atlantic and Pacific coast steamship lines have been acquired and supplemented at a cost of about $8,000,000; rolling stock equipment has been increased by nearly 40 per cent., at a cost of over $12,000,000; extensive and most modern shops and machinery have been provided at Montreal and other points on the system, at a cost of nearly $4,000,000; the yards and terminals at Montreal, North Bay, Fort William, Ignace, Winnipeg, Brandon, Broadview, Regina, Moose Jaw and other points of lesser importance have been enlarged. During the three years the gross revenue of the company from traffic has grown from $30,855,000, in 1901, to $46,469,000, in 1904, or about 51 per cent. Land grant bonds outstanding at the end of the fiscal year 1902 amounted to $17,831,000, while at the end of 1904 only $11,500,000 remained to be provided for, and in the intervening period the deferred payments on land sold increased from $3,652,869 to $15,252,308."

◆

—An extract from the London Times of October 4th, cabled to the Montreal Gazette, says, referring to the speech of Mr. George E. Drummond at the recent convention of the Canadian Manufacturers' Association, at Montreal: "We print a fuller report of the speech, showing clearly that that important body so persistently declared to be hostile, is entirely in favor of preferential arrangements. It does not forget its own interests in the least, nor is there any reason it should, but it sees there is an immense mass of imports remaining after all its exertions, and it desires that these imports should come from this country rather than from others. Mr. Drummond is eloquent upon the advantages already accruing from the small application of preferential principles. Opinion in the colonies is ripe for a conference. We believe that notwithstanding Lord Rosebery and others, it is fast ripening here."

◆

—According to a report from Belfast, Ireland, the improvement in the linen trade has made some further progress, though the movement is but slight. The tone of prices all round is in favor of sellers. Small supplies of flax were offered in the local markets, and were disposed of at fair prices. The quality is hardly equal to what was anticipated. Reports regarding the Russian crops are rather unfavorable. The Dutch and Belgium crops are likely to turn out well. As stocks of old flax have practically disappeared, demand for the new crop is likely to be fairly keen. There has been a moderate business in the yarn market, in the aggregate about equal to production. Prices rule very firm, with a hardening tendency. Brown cloth is in quiet request, but not up to expectations. Unions are in irregular demand, owing to the unsettled condition of the cotton market. There is a slight improvement in the demand for damasks and housekeeping goods. The handkerchief trade is fair. Bleached and finished linens for the home trade are selling moderately, with a quiet tendency towards improvement. The shipping trade is about maintained. Orders from the United States are rather disappointing.—Drapers' Record.

30 Days of Grace

for the payment of Renewal Premiums is one of the many privileges the SUN LIFE OF CANADA grants its policy-holders. Should the Assured die at any time within the days of grace the claim would be promptly paid, even though the premium had not been paid.

COMPANY RESERVE FUNDS.

The forcing into liquidation of a number of large companies during the past two years has afforded the public a great deal of light on the internal management of joint-stock companies. And the carriage of the liquidation proceedings through the courts has pointed out a number of breakers in the sea of finance that those responsible for the management of companies should keep constantly in mind. Not only the winding up of the Farmer's Loan, but the more recent winding up of the Atlas Loan and Elgin Loan and Savings Company, of St. Thomas, consequent on the investments of these latter two companies in speculative stocks, which would appear to be entirely outside of the field of a loan company, give the best-known illustrations of gross mismanagement that are available.

During the course of the winding up of the Atlas Loan Company it was ascertained that the manager of the same, A. E. Wallace, with that aggressive spirit common to the A. E. Ames group of latter-day financiers, endeavored to place his company in a very brief time in a position occupied by only one other loan company in Canada. He began under the authority of the Loan Corporation Act by getting the shareholders of the company to pass a by-lay authorizing the maintenance of a reserve fund, consisting of sums already set apart for that purpose together with such other sums as might be contributed, and added thereto from undivided profits and the profits and increase of such sums. Not being satisfied to allow this reserve fund to accumulate itself from the excess of profits over dividends paid, he recommended that the shareholders of the company should pay into the company's coffers an amount equal to the paid-up capital of the company, said amount paid in to be credited to the Reserve Fund, which would place the company in the enviable position of having a reserve equal to its paid-up capital. This was followed by a circular issued to the shareholders, setting out the tremendous advantages of this course; and subsequently a meeting of shareholders was held at which a resolution was carried that the directors should take immediate steps to procure from each of the shareholders a written agreement to so pay up the Reserve Fund. Although no immediate action was taken at this time, the shareholders were subsequently, in 1901, called on to pay up this amount to the credit of a reserve fund, although no expressed by-law was passed authorizing the step.

Later on, the balance above was paid into the company, and the shareholders were evidently of opinion that this extra amount paid in would be considered in the nature of a deposit, and that it would be much safer than if they had simply taken up stock in the ordinary course. As no by-law had been passed, however, covering the situation, and as nothing appeared to show any reason for this extraordinary method of upbuilding the company, the reserve fund was resorted to when the company went into liquidation as a fund out of which the general creditors of the company should be paid their claims.

The contributors to the reserve fund consequently made a claim to rank as creditors along with the depositors and debenture holders, and on the first hearing before the Master-in-Ordinary he decided that they were so entitled. An appeal was, however, taken by the creditors generally, when the decision of the Master-in-Ordinary was reversed, and the right of the shareholders of the company who had contributed to this reserve fund to rank on it was virtually negatived.

In the ordinary course of winding up, shareholders are not entitled to share in the assets of a company until after all the claims of the outstanding creditors have been satisfied in full; and as this very seldom happens, the shareholders very seldom get anything back on account of their investment. The contributors to the reserve fund, believing that they were to be in a preferential position, endeavored in this action to place themselves on a par with the creditors and share pro rata with them. The learned judge, however, who tried the action, in the absence of any by-law setting out the object of crediting this reserve fund and the way it was to be considered when credited, held that there was nothing to indicate that this reserve fund was to be considered in any way different from the ordinary capital stock of the company, which had previously been paid up.

This case not only illustrates the folly of the high finance essayed by a number of too aggressive financiers who some time ago were very much before the public eye, but is also a good lesson to other companies to be most careful as to the system adopted in the internal management of their affairs. Everything in connection with the management of a loan company should be done in a systematic way, and all changes should be carried out with the greatest care, so that when difficulties come there will be no room for dispute as to the standing of parties; but the shareholders, as well as those interested otherwise in the company may be protected to the utmost where otherwise they may have to suffer severely.

* * *

THE WINNIPEG FIRE.

Tuesday night's fire in Winnipeg was startling to the citizens in two directions. For one thing it indicated to them how terrible a thing a conflagration in the heart of the city might be if the wind fanned the flames persistently among its inflammable and irregularly built blocks. For another, it demonstrated how unhappy, not to say helpless, an urban community is when deprived of its customary conveniences or motive powers. Thus, we are told that both electric light and electric power were cut off by the melting of the wires, and that primitive lighting methods and type-setting by hand had to be resorted to by newspapers and householders. Happily the fire, though fierce, was confined within a limited area, and there was no truth in the damnable story circulated in commercial circles of Toronto on Tuesday forenoon that the fire broke out afresh during the early morning and did four million dollars worth of damage. As it is, the loss is serious enough, approaching a million dollars.

On the corner of Bannatyne Avenue and Albert Street, which last runs parallel with Main Street, is a large structure, formerly four, but quite lately raised to seven stories in height, occupied by Bullman Bros., lithographers. In this fire started between nine and ten o'clock, and its contents were largely of an inflammable nature. The flames spread to the Woodbine Hotel on the south, and then, leaping over Bannatyne Avenue, attacked the extensive store of J. H. Ashdown, which reaches from Albert Street to Main Street. This was presently gutted, and more than gutted, destroying a very heavy stock of hardware, oils and explosives. Further east the flames spread, burning out Steele, the photographer; Dixon, the cigar man; Geo. E. Ellis, jeweller; Kyle, Cheesebrough & Co., dry goods. Explosions in Bullman's and in Ashdown's premises were frightful, and at the same time extremely dangerous, and the other places burned were none of them without considerable stocks of merchandise. For a while it looked as if the newspaper offices, situated to the west of Albert Street, must be destroyed; and what is more, the Leland Hotel, the new Union Bank building, and even the city hall were in line of the advancing flames. But happily before midnight the fire was got under control, its ravages being confined to the blocks bounded by Albert, Main and William Streets north of the Woodbine Hotel. The water pressure was seriously deficient throughout the night. This arose, not from any lack of water at the source of supply, but from the fact that the mains are no longer adequate for the requirements.

This extensive fire points out afresh the necessity of new places keeping their fire-fighting appliances, especially their water supply, on a level with the growth of a city or town. We say points out afresh, because it is only a short while since the people of Winnipeg were warned, not by an eastern journal, but by one of their own journals, the Free Press, that the city's water supply was inadequate for fire purposes. It is true that like sensible people the Winnipegers were at the moment, and still are, procuring new fire appliances—a new engine and water tower, more hose and new stations, and the city's fire department is not badly equipped. The fire department consists of sixty men, with four engines and four chemicals, in three stations, with thirty-two horses. The fire pressure was 75, and eight hose apparatus, two hook and ladder trucks and one aerial ladder were also part of the equipment. The hydrants numbered 564, and there were 12,225 feet of two and a half inch hose, while 106 fire alarm boxes provided signals. The great fault lies in the insufficiency of the mains to supply water enough to combat a heavy fire. This, while a more expensive, is a yet more needful provision for the safety of a great and growing city.

* * *

RAILWAY ACCIDENTS.

The succession of deadly railway accidents on the railways of Canada and the United States for weeks and months past has become sufficiently regular to make people begin to sicken with apprehension. And it is a frightful feature that a large proportion of them are the result of negligence or disobedience of orders by railway servants. We know how, in others than railway workers, familiarity with danger brings about contempt for it. Sailors are proverbially reckless; so are miners, and they are in peril half their time. But in the case of miners so many lives do not depend upon their prudence or recklessness as where trains are carrying hundreds and thousands every day. It seems as if, with the growth of railway traffic and the increase of railway speed, the train hands and switchmen grow less careful instead of more so. The word "accident," as applied to a railway horror like some of those terrible recent occurrences on railways, can no longer retain that shade of meaning which connects it with *chance*. They are horrid casualties, largely caused by faults in men. How can such faults be punished?—or rather, how can such faults be eradicated?

The frightful mortality every year on the railways of the United States—and to a large extent on those of this country as well—is causing people to believe that many of these causes of violent death should no longer be, as they used to be, attributed to a "visitation of Providence," but to some intrinsic carelessness on the part of railwav men themselves. That such people are not far wrong is admitted even by such a thorough-going railroad man as Mr. J. J. Hill is evidenced in the following words: "A careful examination of railway accidents will show beyond question that three-quarters or seven-eighths of them are due to disregard of well-established rules which experience has shown would prevent accidents. Until the public realizes its own danger from the neglect of those whose duty it is to protect the trains by carefully observing the rules made for the preservation of human life, and without which it is in the greatest danger, there will be no relief from the liability to accident. The enormous growth of railway mileage has greatly increased the number of employees, among whom will be found many of the most skilful and careful men in railway service. However, the difficulty of enforcing discipline and the careless familiarity with which men take not only their own lives but the lives of trainloads of passengers into danger, will not be prevented until those who are responsible through criminal neglect are punished criminally." These are strong words, but the authority of their utterer should give them peculiar weight. Certainly something needs to be done beyond merely regretting.

* * *

THE WHEAT CROP IN THE FAR WEST.

The favorable result of another year's harvest to the farmer in the Canadian North-West is pretty well established by this time. Our correspondent at Winnipeg sends us the following at noon yesterday: "The weather during the past week has been generally favorable for threshing in the West and good progress has been made, about seventy-five per cent. being completed. The returns indicate that the crop will be larger than last year, but the grade lower; which conditions will, however, be more than offset by prevailing high prices."

* * *

THE FRUIT TRADE.

A brief retrospect of the Canadian fruit trade for the year now closing will at this stage be in order. The season, it will be remembered, opened most inauspiciously. A long, almost unprecedentedly severe winter was succeeded by a backward spring and a cool, moist summer. Many were the fears expressed, on account not only of the effect upon the trees, but upon the quality and quantity of such fruit as might come to maturity. In one respect, unfortunately, these fears were well-grounded, for thousands of trees, even on the Niagara Peninsula, Ontario's warm belt, were either winter-killed or almost irreparably damaged by weather. Blocks of peach trees of a thousand or more were in some cases completely destroyed. The forecast of an absolute peach famine, however, happily proved groundless, for the crop of that luscious fruit, while smaller than usual, turned out much better than expected, both in total and quality. The growers, too, reaped the benefit of enhanced prices for their peaches. In fact, it may be said that, taken as a whole, the season was a satisfactory one, both to growers and dealers, the general high range of steady values having atoned, or very nearly so, for any decline in extent of the harvest. Strawberries were in some sections very scanty, and prices kept to a good level throughout. Plums were one feature, however, which were uniformly of poor yield, but prices very high.

With regard to apples, the reports have been of a very conflicting nature. The crops of summer and fall varieties were, as a rule, good throughout most sections of Ontario. For the later or winter apples, however, the different districts report very different yields. Insect pests have been fewer than usual. Taking the country as a whole, the crop in Ontario may be described as fair—very good, in fact, when last year's bumper crop is taken into consideration. Quebec's crop of Fameuses apples seems likely to prove considerably better than was anticipated some few weeks ago. In Nova Scotia the yield is said to be very good. It is unfortunate, in a selfish sense, so far as Canadian apple growers are concerned that, with a good crop themselves, they find the United States as well as Great Britain and some continental countries also reporting good yields, which keeps the market price very low. A month ago, in consequence of this, buyers were offering very low prices for orchards here, and, though these have improved somewhat of late, growers are even now able to obtain, comparatively speaking, but little for their product. There can be little doubt, however, that improved business methods and a system of co-operation would greatly ameliorate this condition, a fact which is becoming more and more recognized with each year. Recent reports from the Old Country say the market is improving, especially for highly-colored fruit.

British Columbia is surely forging ahead as a successful fruit-growing country. Thousands of acres in the Okanagan and other regions of that Province have been set out during the last few years, and the product, in quantity and grade, compares very favorably with that of other places. Manitoba and the North-West present an attractive and growingly large field for the marketing of this fruit, especially as they have in the past been largely dependent on that from California orchards. Ontario should also, no doubt, be able to dispose of much of its surplus in these rising markets, but this is an opportunity which has been to some extent neglected, and much of the fruit which has actually gone thence has not been packed in an attractive style. Recent concessions on the part of the railroads should help to bring about a better state of affairs in the fruit trade.

QUALITY VERSUS CHEAPNESS.

During the last few years—a period of prosperity for most branches of Canadian industry—there has been a striking uniformity in the reports emanating from both wholesale and retail dealers as to the higher quality of the goods mostly asked for by the public. The people as a rule have had of late years plenty of money to spend, and they have used it in the gratification of a natural desire to possess not only a sufficiency of the necessaries and luxuries of life, but in obtaining such articles of a high class and durable nature. In many lines of dry goods, of both fancy and a staple description, this feature has been particularly marked, and has done much to account for the highly satisfactory turnovers in that trade which have been reported during the last few seasons.

That this grading up of quality is a consummation devoutly to be wished in the interests of trade need scarcely be contended. But it also evidences a craving which without a doubt is bound to react to the best interests of the consuming public as well. The more discerning well realize this; have, in fact, generally contrived to act in accordance with their circumspection, and have, as far as their means would allow, always thought of the quality of their purchases rather than of their cheapness. But with regard to the masses, the buying capacity of whom it is that in the end creates what is known as the volume of trade, their present good intentions to think chiefly of quality may be only a current phase due to their prosperity; and it may pass away with a decline of the latter.

It is to this possibility we look with some misgiving. Cheapness is one thing—the attachment of a fair reasonable price to any given article of commerce; the so-called cheapness of paying for an article which has only a veri-similitude to that which it pretends to be is another matter altogether. And, at some periods of flagging trade, there is so much temptation to the turning out of such miserable goods! Prices are cut to attract custom; what more natural for the next step to be the offering of goods which merely *seem* right. The price becomes set at a lower mark; the customer calls more and more for such, or rather for the price at which these are accustomed to be sold; the retailer naturally asks the wholesaler to supply a cheaper and still cheaper grade; the wholesaler passes on the request to the manufacturer, and he, of course, through competition, has to set about supplying the demand. A constant sacrifice of real worth to false cheapness!

And who gains in the end? Not the poorer consumer, because it is only the rich man who can afford to buy and pay for such mistakenly cheap goods; not the retailer or jobber or wholesaler, because the annual turnover of either speedily becomes contracted; and not, in the last reckoning, the maker of the goods, because in the long run faith in goods of such poor quality is altogether given up, and the demand shows a serious slackening. Not only this, but we believe it could be shown in the world's history that whole industries have here and there fallen into disrepute merely through this running after cheapness at all costs.

SEPTEMBER FIRE WASTE.

According to a careful compilation made by the New York Journal of Commerce, the total loss through fires in the United States and Canada during the month of September just past was $14,387,650, a sum very considerably in excess of the loss either in the same month of last year or in August, 1904. The following summary will show the loss by months for three years in detail:

	1902.	1903.	1904.
January	$15,032,800	$13,166,350	$21,790,200
February	21,010,500	16,090,800	90,051,000
March	12,056,600	9,907,650	11,212,150
April	13,894,600	13,549,000	23,623,000
May	14,866,000	16,366,800	15,221,400
June	10,245,350	14,684,350	10,646,700
July	10,028,000	12,338,600	11,923,200
August	7,425,550	8,428,350	9,715,200
September	9,945,000	9,939,450	14,387,650
Total 9 mos:	$114,504,400	$114,971,550	$208,560,500

The total loss for the whole of last year (twelve months), it may be remembered, was only $156,195,600, as against a total for only nine months of the current year of $208,560,500. The high aggregate for September, was brought about by severe fires in Halifax, Montreal, and in the middle-western States. One feature which seems to have been rather marked during the month was incendiarism, which was responsible for several fires. Execration for incendiaries cannot be too severe. It is distressing enough to have to hear of the regularity and immensity of burnings from what we have come to consider "natural" causes, without having fires set. Hard labor, pillory, the lash, heavy fines—any or all these are deserved by the scoundrel who fires his neighbor's property.

* * *

OUR HALIFAX LETTER.

All the firms that were burned out in the recent disastrous fires on the waterfront have their plans for rebuilding well defined. The majority will soon have more commodious warehouses and offices than before the fires. Business is being carried on as usual by the various firms in temporary quarters. The heaviest local losers will be the home insurance companies, whose losses are quite heavy. All the Halifax insurance companies were hit rather hard, and the dividends of some of them may for a time be affected. An investigation into the origin of the two fires has been ordered by the Mayor, and is now being proceeded with before the stipendiary. No evidence of importance has so far been discovered, other than the fact that a considerable quantity of dynamite and powder was found stored in one of the warehouses, in violation of a city by-law. The representative of the Fire Underwriters attempted to question the witness as to the manner in which the fires were handled by the City Fire Department, but the stipendiary refused to take testimony on this point. One result has been the decision to purchase a fire-boat to aid in subduing future fires on the waterfront.

A new corporation is being launched in this city under the name of the "Annapolis Valley Fruit Estates, Limited." The names of the incorporators have not yet been announced, but it is said that among others, Prof. Sears, of the Horticultural College, Wolfville, and B. W. Chipman, Secretary for Agriculture, are interesting themselves in the scheme. Thirty farms, comprising an area of over 3,000 acres, have been purchased in the fruit growing belt of the Annapolis Valley. There are said to be on the property 12,000 fruit bearing trees, the yield from which is about 16,000 barrels of apples, and perhaps 10,000 young trees which have not yet come into bearing. The company proposes to issue $350,000 first mortgage five per cent. bonds secured by these 30 odd farms, orchards and buildings. There are doubtless single orchards in the valley that return fully 20 per cent. on capital invested, but it remains to be seen whether the results under company management will be equally satisfactory. The scheme on paper is a very attractive one, and there is every likelihood that with proper management, fruit farming in the Annapolis Valley is a profitable undertaking.

The Marconi towers at Table Head, Glace Bay, C.B., are being taken down and new ones erected four miles inland. There seems a good deal of mystery surrounding the experiments in transatlantic wireless telegraphy carried on at this station, and one reason given by a member of the company for the removal is that it being of strategic importance to secure uninterrupted communication between Great Britain and Canada in case of war, the inland site for the towers was deemed necessary as being less vulnerable. The new station, it is said, will be equipped with Marconi's latest inventions in wireless telegraphy, and is intended to be the most powerful yet built by the company.

The farmers of Pictou County are receiving just now an object lesson in the convenience of Government ownership of railways. The hay crop in that county the past summer was a complete failure, and nearly all the farmers are compelled to buy hay for their stock. By an arrangement with the Government, hay is being transported from Quebec to these farmers, free of all railway charges. The farmer goes to the County Treasurer, pays the Quebec price for whatever quantity of hay he requires, and in due time he receives it at his railway station without further charge. This is not a vote-catching scheme, for the situation is so pressing that the free carriage of the hay has the approval of the representatives of both political parties. One thing may be said, that in the regular railway man's vocabulary such business is not business.

The elevation of Benjamin Russel to the position of Supreme Court Judge in this province, gives satisfaction to the general public of Nova Scotia. He is a well-trained, long experienced and capable lawyer, a kindly and honorable gentleman. As teacher of the principles of Contract in the Law School of Dalhousie, he won good-will and co-operation of his classes, and every graduate is his friend. In the political field he was a hard hitter, yet his political opponents, referring to his selection during a campaign, have no words but those of praise for the new Justice. There is still another vacancy on the Supreme Court Bench in this province, and rumor says that Attorney-General Longley is slated for the appointment in due course. The town council of Dartmouth has appointed Mr. W. R. Foster, barrister, as Recorder of Dartmouth, in succession to Mr. Justice Russel.

The copper smelting and refining works at Pictou, belonging to the Copper Crown Mining Company, have passed into the hands of Halifax capitalists who propose to put the plant in condition for operation at an early date. There is a coterie in this city who have great faith in the future of the copper mining industry in this province, and are determined to place it on a more substantial basis than heretofore.

The death is announced this morning of Michael Murphy, surviving partner in the wholesale dry goods firm of J. & M. Murphy. It is not very long since two other brothers, John and Rev. Monsignor Murphy, passed away.

The Egerton Tramway, which runs between the towns of New Glasgow, Trenton, Stellarton, and Westville, in the Pictou coal district was opened for traffic last week. The total length of the line from end to end is eight miles.

Halifax, 10th October, 1904.

CHATHAM, N.B.

This town, long established on the Miramichi, was going ahead very fairly till the Sulphite Fibre Company pulp mill failed in 1901 or 1902, which cost the place a couple of hundred hands, who went elsewhere. There are, however, 5,000 people still in Chatham, and they seem to get three square meals per day. Among the industries of the place is the smelt fishery, an important one. The smelts are worth $80 per ton to fishermen on the ice, we are told, and worth $200 a ton in New York. A very considerable business is done in the shipment of them to the Eastern States. The salmon fishery is another. The salmon around the Miramichi region are not large, might say 10 lbs. each, and are of delicious flavor. These are put up in boxes, which are iced at the start and re-iced at intervals until they reach the American market, netting presumably a very good profit to the exporter. One of the prominent firms of the town is that of A. & R. Loggie, who do an enormous business in fish, in which they are most expert packers, and in blueberries and other fruit. They have on one occasion sent eleven cars of blueberries in one train to Chicago. This is but a single illustration of their extensive business, which is varied as well as extensive.

The Miramichi has been known for years in the British Islands as a great lumbering river. Lumber cutting seems to hold its own there still, and there appear to be as many mills as before—two new small ones were built there and at Nelson—and there is no marked decrease in the quantity of wood handled. J. B. Snowball & Co., are well known in this trade, and probably saw more than any other firm. W. M. Mackay, of St. John, are large shippers, and so is F. E. Neale, but they cut little if any, purchasing rather lumber already sawn. In Campbellton and Newcastle, and at a more recent point named Nelson, there are active cutters. Lynch's mill is beside Nelson village on the river. There is a box shook factory in Nelson, five miles above Chatham, built by T. W. Flett, and doing very well in shipping to the Old Country box shooks and small wood in other forms, for the use of English exporters.

Now that the Government has taken over the railway from Fredericton to Chatham, which passes through some very picturesque country indeed, there is a likelihood that a line of steamers will be established to run between the Miramichi and Prince Edward Island, thus adding another to the lines of tourist travel which almost envelop our beautiful Maritime Provinces.

* * *

THE QUEBEC ASSURANCE COMPANY.

The new offices of the Quebec Assurance Company, at 81 St. Peter St., Quebec, were the scene of a pleasant, informal gathering on the afternoon of Tuesday, October 11th, the occasion being a luncheon, given by the president, the Hon. Pierre Garneau, M.L.C., and his co-directors, to mark the completion of the reconstruction of the company's building. Amongst those invited were: Hon. S. N. Parent, Premier of Quebec, and Mayor of the city; Hon. E. B. Garneau, Hon. Richard Turner, Colonel Turner, V.C., D.S.O.; William Power, M.P.; R. Audette, John Breakey, U. Cantin, J. A. Hedley (Monetary Times); J. H. Holt, A. Hunt, John Theo. Ross, R. La Roche, G. Tanguay, Alfred Wright, (chief agent, London and Lancashire Fire Insurance Co., Toronto); D. Geggie, A. Scott, P. G. Lafrance, F. J. Cockburn, J. Bazin, A. G. Hutchison, Montreal; T. F. Dobbin, Montreal; Andrew Thompson, Wm. Thompson, David Watson (Quebec Chronicle), and many others.

A large vacant room on an upper floor was converted into a suitable dining-room, and decorated with flags and bunting, a picture of the reconstructed building occupying a prominent place; while an adjacent office was fitted up as an ante-room, in which were displayed some coins, a parchment, and an engraved brass plate, taken from the old foundation-stone of the building, together with an impression of the old seal of the company, and portraits of the president of the Quebec, the Hon. Pierre Garneau, and the general manager of the London and Lancashire, Liverpool, F. W. P. Rutter, Esq.

After justice had been done to a well-selected menu, and the health of the King had been duly honored, the toast of the day, "Success to the Quebec Assurance Company," was proposed by Mr. John Theo. Ross, in a felicitous speech. He alluded to the age of the company, the oldest fire office in the Canadas, and spoke of its useful and honorable career in Quebec. Mr. Thomas H. Norris, a director of the company, replied on its behalf. He said the original building, in a reconstruction of which they were then assembled, was commenced in 1821, the company having begun business three years previously, in 1818. Its first serious loss was in 1826 in connection with which the minutes record that the company "lost its small engine and several buckets, and the deputy-secretary, in whose charge they were, escaped at the risk of his life. Its largest losses were $185,000, in May, 1845; $200,000, in 1866; $125,000, in 1870, and $362,000, in 1881. The last mentioned fire the speaker particularly remembered; it was small at first, but was allowed to spread through the jealousy of two rival hose companies. Mr. Norris gave an amusing account of his experiences in helping an old woman to save her stove, when his Sunday raiment suffered considerably. He thought the Quebec Fire Assurance Company has amply fulfilled the object for which it was established, the protection of useful domestic enterprises, and has reasonable claim to the continued and active support of the citizens of Quebec.

In resuming his seat, amid applause, Mr. Norris proposed the toast of "Success to the London and Lancashire," of Liverpool, the Quebec's big brother, which had done it many friendly turns and to whose countenance and assistance the reconstruction of the building was largely due.

Mr. Alfred Wright, of Toronto, chief agent of the London and Lancashire, responded, and after reading a letter from Mr. Rutter, his general manager, regretting his inability to be present, gave some particulars of the early history of the company, and its marked success during late years. Its annual income was now close upon $6,500,000, and it offered a total security of $19,135,000, which sum was pledged for the safety of the Quebec's patrons, whose policies it guaranteed. They had the advantage of the strength of an English office with the convenience of a local institution familiar with the citizens and their requirements. He concluded by congratulating the citizens on Quebec's evident prosperity, and expressed best wishes for its continuance.

The health of the chairman, proposed by Thomas F. Dobbin, of Montreal, and duly responded to, concluded a pleasant gathering.

The building as reconstructed is five stories high, and of Deschambault stone and Scotch firebrick with dressed stone embellishment and carving. The roof is double and of an improved form, but little used yet in Quebec, calculated to carry a great weight of snow with safety. The heating is by hot water furnaces, with radiators on the latest single supply system. Ventilation has been carefully provided for, while the electric installation is very complete. Lavatory accommodation of the latest type is provided on every floor. The elevator is a high speed triplex hydraulic, with electric prime motor. The architects were the well-known firm of Hutchison & Wood, Montreal. The building contains nineteen well-lit and convenient offices. The "Quebec's" own office is on the first floor; the Merchants' Bank occupy spacious and handsome premises on the street level, and the remainder of the building is tenanted by leading legal, financial and agency firms.

* * *

TORONTO INSURANCE INSTITUTE DINNER.

A banquet to mark the opening of the sixth session of the Insurance Institute of Toronto was held at the King Edward Hotel on Tuesday evening last, 11th October. It was a pleasing and memorable entertainment. It is not given to every dinner committee to bring together from points five hundred miles apart 130 persons, to give them a dinner of nine courses, to treat them to eight speeches and six songs, to Radnor water and cigars, and to send them home promptly at midnight. But this is what the entertainment committee of the Institute managed to do. The president, Mr. F. Sanderson, F.F.A., of the Canada Life, was in the chair. At the same table with him were the vice-president, Mr. C. C. Foster, Mr. S. R. Tarr, secretary; Messrs. Byron E. Walker, T. L. Morrisey, (Montreal); A. McDougald, Montreal; J. L. Blaikie, Thos. Hilliard, (Guelph); J. K. Macdonald, Col. W. C. Macdonald, Arthur J. Hughes, F. J. Lightbourn, J. Maughan, Leopold Goldman, J. F. Junkin, Robt. Junkin, P. C. H. Papps, E. E. Reid, (London); H. C. Cox, Dr. J. F. W. Ross, E. Williams, and G. B. Woods.

The chairman in proposing the first toast, "The Institute and Sister Institutes," sketched in a brief way its career since 1899 until now it has a membership of 400. He also cited voluntary testimony given by well known people in the insurance world to the value of the work the body is doing. In responding to the toast Mr. T. L. Morrisey, president of the Montreal Insurance Institute, discussed the Fire Insurance situation. His address was that of an observant man who has thought out his subject. He struck out freely at amateur insurance men and would-be insurance critics, but some of his glancing blows had the assuaging salve of humor in them. Mr. J. K. Macdonald, of the Confederation Life Association, proposed the toast of "Accident and Guarantee Insurance," and dwelt upon the importance of these departments of the business. In responding Mr. Frank J. Lightbourn, of the Canadian Accident and Guarantee Company, illustrated their remarkable growth of these branches. Introducing the toast of "Life Assurance," Mr. J. L. Blaikie, of the North American Life, made a very earnest statement of its beneficence and importance, closing with some fatherly advices to the young men of the Institute. The response of Mr. Thomas Hilliard, of the Dominion Life, showed an excellent knowledge of the business, and the readiness of one who can adapt his speech or story to his audience. The last toast, that of "Fire Insurance," having been reached, the chairman called upon Mr. B. E. Walker, the well-known banker, to propose it. That gentleman, disclaiming any minute or technical knowledge of his subject, spoke of the apparent lack of any scientific basis of rates in fire-underwriting, such as that upon which the life-underwriters depend. He suggested rather than asserted that fire rates of late in Canada had not been high enough, and hinted a doubt of their absolute consistency. In closing he advised the fire insurance students of to-day to aid the profession in getting together from their own study or experience such a body of facts and statistics as would enable the proper measuring of risks to be accepted. Mr. C. C. Foster, of the Western Assurance Company, urged the serious consideration of the troublous features of the situation, and the need of approaching these difficulties in a spirit of self-respect and mutual confidence. The occasion was a most agreeable one, the viands excellent, the singing much above the ordinary, both as regards the selections and the manner of their rendition. The members of the entertainment committee are Messrs. R. Junkin, E. Marshall, J. A. Shaw, and H. A. Sherrard, convener.

* * *

THE CARD SYSTEM IN LIFE ASSURANCE OFFICES.

The system of keeping newspaper subscribers, names and accounts on cards, of keeping small or transient store accounts on cards, instead of in elaborate books of account, has a number of points to commend it. The system has been found both serviceable and economical by life assurance companies also. And in order that its use in this direction may be made more fully known to insurance managers, we have prevailed upon a gentleman in an assurance office, who has tested the system by lengthened use, to favor us with a description of its working. It may be premised that this card system, as the method of keeping track of business by means of cards instead of in books is called, is gaining in favor from year to year.

The growing use of the card method is especially noticeable amongst the large life assurance companies. In the Canada Life office, for example, there are over a dozen different sets of cards in daily use, cards of different colors and sizes, and with different spaces for different kinds of data. In describing some of these sets of cards, it would not be possible in a limited space to go into detail and describe all the data written on them, so only the chief things about these will be noted.

As soon as an application for assurance is accepted that fact is noted on a small card, which is called a "Life Assured" card. On it is the name of the assured, the number of the policy, etc. If the assured person has previously taken out other policies in the company, the number of this new policy is afterwards added to the old card, and only one is kept for that life. These cards are arranged in alphabetical order; so when the name of the assured is known it is possible, by means of these cards, to find out the number of the policy and from this all the other data concerning it. A small card is also kept for each declined case.

A set of policy cards is kept. These are among the most important in the office, giving the name and age at entry of the assured, the number of the policy, the amount of assurance, the system and plan of assurance, the date of entry, the premium, and whether it is payable yearly, half-yearly, or quarterly. There is also a place upon it to mark in what manner the policy is cancelled, i.e., by death, lapse, surrender, maturity, etc., and to show the number of premiums that have been paid at that time. These cards are written up when each policy is taken out and are afterwards kept in numerical order. Cancellation cards corresponding to these are used.

Another set of cards is used to keep track of the premiums paid on each policy. This is done by having a large card (about 4 in. by 5 in.), for each policy issued. On this are a large number of small blank spaces ruled off, in which the several payments of the premiums are entered as they are made. These cards are sub-divided into those belonging to each branch, and are kept in numerical order within these sub-divisions. The most important uses to which these cards are put are: (1) To be able to tell the last premium paid on any policy. (2) To keep track of the premium income of the individual branches. (3) To find the amount of deferred premiums at any time. (4) To write the premium receipts which are sent out. Another set of useful cards is that which is used in connection with what is called daily valuations. For instance, suppose a policyholder writes to the company asking what the cash value of his policy is, the amount the company would loan on it, how much he would have to pay to have his policy changed to some other plan, etc., a special card is used on which to put the valuation. At the top of such a card we find all the data necessary, including name of assured, number of policy, amount and plan of assurance, age at entry, number of premiums paid, profits, loan and interest against the policy. The lower part of the card is blank and is used in working out the necessary calculations; the back of the card is used for this same purpose. There is room for at least a dozen different valuations. These cards are kept in numerical order. On another set of cards is kept a record of the profits declared on policies.

In the Actuarial Department of the company, there are three main sets of cards: (1) Small policy cards; (2) summary cards, corresponding to these, and (3) small cancellation cards. Those belonging to (1) are filled in just as soon as the policy is written. They give the number of the policy, the system, plan, age of assured, amount of assurance. No. (2), as we have said, is a summary of these, and is used to lessen the labor involved in making a reserve valuation. On a summary card will be entered the total number of policies and amounts of assurance written in each year belonging to each particular system and plan, at each age of entry. For instance, the summary card for the Life 20 payments, non-participating plan, issued in 1900, aged 21, may show thirty policies for $50,000 assurance. (3) is the small cancellation card with blank spaces for the number of the policy, the system, plan, amount of assurance, age at entry, date of entry, mid-year valuation, reserves claimable, reserves released, manner of cancellation, etc. When there are a number of corresponding cancellation cards it is an easy matter to group them. For instance, we might find that of the thirty policies issued in 1900 on the Life 20-payment plan, described above, five of them were cancelled in 1901.

Some details respecting the use of cards in the Medical Examiner's Department must be held over for a future paper.

AN UNBLUSHING LIE.

A subscriber in Western Ontario, a bank manager, writes to the editor of this journal, on October 12th, stating that an agent of the State Life Insurance Company of Indiana named Sweeny, solicited him for life assurance in that company. Being asked by the banker what he had to say to an article in the Monetary Times criticising the State Life Company and its methods, Mr. Sweeny replied: "The editor of that paper is a sore head because we refused to permit him to take out insurance and pay his premiums in advertising." The banker asks what truth there is in this statement. We reply that there is no truth in it. The story is a deliberate falsehood. No one in this office ever solicited insurance in the State Life—we have better sense—and the editor never spoke to or to his knowledge saw, any body connected with that concern. Mr. Sweeny must be hard up for arguments when he resorts to untruths which can be so quickly and so easily exposed as this one.

* * *

LIFE ASSURANCE ITEMS.

Government life insurance appears to be prosperous in the State of New Zealand. The last annual report of the Department of that State shows new insurances, £702,350 sterling; income from premiums and interest, £463,380; total sum insured with bonuses, £11,111,807; death claims and matured endowments, £194,439; total assets, £3,610,299; average rate of interest earned slightly over 4.4 per cent. It is interesting to note the proportion of funds invested in various classes of securities:—

Mortgages on real estate..	£1,886,574	or 52.3%	of total assets.
Government securities	667,936	“ 18.5%	“ “ “
Loans on policies	618,190	“ 17.1%	“ “ “
Municipal debentures	140,325	“ 3.9%	“ “ “
Landed and house property.	123,580	“ 3.4%	“ “ “
Miscellaneous assets	99,172	“ 2.8%	“ “ “
Cash	73,489	“ 2.0%	“ “ “
Properties acquired by foreclosures	1,033	“ 0.0%	“ “ “
Total	£3,610,299	100%	

* * *

BANKING AND FINANCIAL.

The United States Treasury Department has been notified by the Sovereign Bank that several United States bills have been noticed in circulation in Canada, which have been "raised" by a penman from a one to a ten.

As a result of the unfavorable money situation and the shrinkage of gold stocks in Germany, the bank rate of discount of the Imperial Bank of Germany has been raised from 4 to 5 per cent., and the lending rate to 6 per cent. These rates were followed by other note-issuing banks as usual.

It is reported from London that after a very stormy meeting on Monday last, the shareholders of the British South Africa Company authorized the issue of $5,000,000 new capital. Before the close of the meeting, which broke up in confusion, the chairman, the Duke of Abercorn, was unable to secure a hearing, and left the hall. The directors, with the exception of Earl Grey, were re-elected. The Earl sent a letter, resigning his position, because of his appointment as Governor-General of Canada.

* * *

—The gross earnings of the Grand Trunk Railway for the year since the 1st of January last show a decrease of a million and a half dollars. Thus, nine months this year, $25,513,153; nine months last year, $27,108,295.

TORONTO, THURSDAY, OCTOBER 14th, 1904.

DRY GOODS NOTES.

It has been decided by the assignee not to set aside the sale of the Canada Woolen Mills property to Mr. W. D. Long, of Hamilton, as has been requested by Mr. G. F. Benson, of Montreal. We understand that a check from Mr. Long for the amount in question has been accepted, but that an appeal will be made.

The raw cotton market in New York is not very interesting just now. On Tuesday it declined some ten points, but as there was but little cotton for sale the tone steadied, which was helped, it is believed, by the interests which have tried to bull the market before during the last month.

Buyers recently returned from the Old Country say the situation is very firm in cottons and linens. Manufacturers have but small stocks, and have to make to order, with the result that they have to obtain raw material at the high prices which now prevail. It is likely that English cotton and linen goods for the spring trade will range about 10 per cent. higher.

The shareholders of the Montmorency Cotton Mills Co. held their annual meeting in Montreal on Saturday last. The result of last year's work was considered satisfactory, and hope was expressed that an improvement would set in soon. The following directors were elected: Lieut.-Col. F. C. Henshaw, H. M. Price, John T. Ross, R. Forget, N. Rioux, Alex. Pringle, and Edgar McDougall, and at a subsequent meeting Lieut.-Col. F. C. Henshaw was elected president, and John T. Ross, vice-president.

* * *

FOR GROCERS AND PROVISION DEALERS.

The report of the United States Department of Agriculture states that the average yield over the whole country of spring wheat this season was 12.7 bushels per acre. The Ontario yield was 18.5 bushels. Of oats, the yield in Ontario was at the rate of 39.3 bushels per acre, against 32.1 in the States.

It is a long time since prunes and raisins were held in primary markets at such low prices as prevail this year. The Pacific Coast crop of prunes is estimated at 165,000,000 pounds, while consumption on the whole scarcely seems so large as a few years ago. Perhaps one reason for slow sales is the constant unsettlement of the situation by the vacillating business in recent years on the part of growers.

The Annapolis Fruit Estates, Limited, with a capital of $350,000, and headed by Senator McKeen, of Halifax, purposes to combine about thirty fruit farms in the Cornwallis Valley, comprising about 12,000 bearing trees, and about 10,000 others. Besides apples, the company will cultivate small fruits and vegetables, and will erect canning and vinegar plants.

During the year just closing, importations into Great Britain of Cape fruit have increased considerably. They numbered 34,723 boxes, not a very large quantity when looked at as trade figures, but significant when it is remembered that they follow such quantities as 21,968 and 14,998 in the last two years respectively. Plums were the largest item, being responsible for 13,553 boxes, while peaches amounted to 7,876, and grapes, 7,641 boxes.

—The Grand Trunk Railway Company having applied to the Railway Commission for permission to haul coal to certain manufacturers in Cobourg for 80c. per ton, their usual charge to other customers being 90c.; consent was refused. The allegation was made on one side that the cut was needed by the parties in question in order to continue in business. The extraordinary circumstance of a railway making a concession to a customer gratuitously was, however, almost beyond belief. And it now turns out that the customer in question, had really threatened to bring their coal in by water unless the railway gave them a cheaper rate. Hence the condescension.

* * *

—Much dissatisfaction is expressed by merchants and business men at the inequitable working of the present assessment system in the Province of British Columbia. Many attempts have been made to have it rectified at the hands of the Government, but so far without avail, the Government having allowed the matter to slide. At a meeting of the Vancouver Board of Trade last week, the following resolution was passed: "That this board has learned with very great regret that no action has been taken regarding the appointment of a commission to inquire into the Assessment Act, and strongly urges upon the Government that steps be taken at once to carry out the promises made."

* * *

—We have had the pleasure of a call from Mr. James Martin, F.S.S., of Martin, Farlow & Co., King St., London, Eng., who is secretary of the Society of Accountants and Auditors, of England, and editor of the Incorporated Accountants' Journal. Mr. Martin has been the guest at St. Louis of the Congress of Accountants from all over the world, and has reached Toronto en route for Montreal and home. His plan to visit Chicago and other northwestern cities, and also, perhaps, to spend some further time in Canada, was dislocated by the extraordinary warmth of his reception in the States, as well as by the embarrassing and exhaustive nature of the duties that devolved upon him in connection with his office as a delegate. To have to go, as we understood him to say he had to do, to attend accountants' dinners at places so far apart as St. Louis and New York, disposed him, when he reached here, to stop a while and rest, and this he did, very agreeably.

NORTH OF ENGLAND LETTER.

"Colored" news, we correspondents are accused of sending to Canada, and of all men, by Lord Rosebery. His Lordship's preface to the new book by E. S. Montague and Bron Herbert, "Canada and the Empire," has received the widest attention in the English press. The book itself embodies the reasons why these two tourists consider the Imperial Zollverein impracticable. Perhaps the preface matters most, and in particular the statement that Canadians receive an unfaithful reflex of Home opinion. For himself, your correspondent dissents vigorously. The brief notes in these letters on the larger politics are dictated by no other interest than that of truth. Statesman as he is, Lord Rosebery himself is not less biased, but more than the average journalist, and the correspondent may retaliate with an adversion to "colored" arguments.

News for export to Canada is prejudiced, as all human communications must be, to an extent. But compared to the distorted news that is flashed between European capitals, it is somewhat akin to the Gospel. We on this side receive news from Canada that is plainly tinctured by self-interest and such news is accepted with the customary reserve. You—if you hear more of one side of the fiscal controversy than another—doubtless draw your own conclusions. Something is suppressed or else the press indicates disproportionately the rooted opposition to any change which is constitutional in our people. It is probably true that the London papers are temporarily ahead of popular opinion, and readers will do well to remember the statement, reiterated on various occasions in these columns, that Chamberlain is the faith of a minority. For better or worse, that simple fact is true.

Mentioning books on Canada reminds one that several Canadian works of fiction are now having a vogue in the libraries. These, like the Kilties, the bowlers, and so on, are all to the good in fostering national sentiment. Especially noteworthy is "The Imperialist," by Sara Jeanette Duncan, a work which is spoiled artistically by its compromise between the political pamphlet and the novel. Yet the pictures of life in the fictitious Elgin (Ont.), atone for a great deal, and one can learn much of the Canadian point of view from Mrs. Duncan's book. Ralph Connor's book receives their attention, and "Fort Amity" (Quiller-Couch), a tale of old Quebec, is read ravenously. Furthermore, there is a serial running now which promises well: "Prudence Malling, The Story of a Canadian Farm," by Ridgwell Cullum. Between this and that, the public should understand the Dominion better soon.

Fiction and the price of iron have more perhaps in common than would appear at first sight. Our paper announces jubilation in the Midlands over a healthier demand for steel than has been known this long time. On the same day come reports from our North-East Coast of furnaces blown out, because of continued depression. Dumping from the States and Germany seems to be commencing a well-earned rest. Company meetings in almost all cases have disclosed a good financial year, and makers are standing out for decent prices. Steel rails are 25 per cent. more dear than in times of past depression they have been. Heavy stocks existed in those days and gambling was rife, whereas stocks to-day are consistently light and the speculator in iron warrants is not too welcome. Coals are not exactly cheap, but the presumption is that steel will continue to be made whether or not prices have to be further reduced.

As the book of evidence taken by the Tariff Commission witnesses, there is a distinct desire for protection amongst a large body of our iron traders. Per contra some of the staunchest of our Free Traders are iron-masters who desire nothing better than to stand upon their own merits against all-comers. Of course people are not wanting who contrast sneeringly the attitude of Mr. Hugh Bell, for instance, with the controllers of the Soo and Sydney works. A great point is made of the alleged desire to make the Canadian tariff level with the United States tariff to British makers.

The increase in the tobacco trade, to which recent allusion was made here, opens a new phase. The U. K. Tobacco Dealers' Alliance now takes the field in earnest opposition to the Imperial Company, which is, of course, the "Trust." Tobaccos, cigars, and cigarettes, under new brands, are to be introduced. They are to be manufactured by this Alliance of thousands of retailers and dealers in a central factory. Every incentive exists for the retailer to push Alliance goods, for they are the anti-monopolist make, and moreover a proportion of profit goes into a benevolent fund. Three-fourths of this royalty goes to local branches, and one-fourth to headquarters. No doubt retailers everywhere will follow with interest this defensive policy of their English colleagues. Australia has already been cornered by the Imperial and American companies in concert; and last advices from South Africa show that certain consolidations in the interest of the Trusts have been made there.

Continental example, in canal management has made a profound impression on our commercial leaders. Incidentally, the name of Canada was cited as one country that had benefited exceedingly by the use of canals. In this kingdom we have 4,000 miles of canals, some of which are derelict, and all of which are neglected. The canal system is not homogeneous, and its just operation is smothered by the conflicting interest of railway companies. Some of the ditches will take only 7 ft. boats, while others will serve for barges of 14 ft. in beam. In all, our canals are a lamentable example of all that they ought not to be. Feeling is such that remedial measures seem inevitable. Showing what others are doing, let France be cited. Since 1879, France has spent 100 millions sterling on canalization, and has 20 millions more ear-marked for outlay.

The tide of tourists has set westwards again. From one American, homeward bound through Paris and Liverpool, a story is gathered which may appeal to the Canadian sense of humor. Outside one shop on the boulevards stands the sign:

English Spoken,
American Understood.

NORTH COUNTRY.

Manchester, Eng., Sept. 30th, 1904.

THE ACCOUNTANTS' CONGRESS IN ST. LOUIS.

One of the features of the St. Louis Exhibition of 1904 has been the number and variety of congresses, banking, commercial, sociological, religious, or other, that have been held at it. Among them was one in September, organized by the chartered Accountants of the United States, their object being to get together not only United States public accountants but British and Canadian. They were very fairly successful in this attempt, for on the 26th, 27th, and 28th of September there came together about one hundred American accountants, besides guests from Britain. The British delegates were: Mr. F. W. Pixley, representing the Institute of Chartered Accountants of England and Wales, and Mr. James Martin, F.S.A.A., F.S.S., secretary of the Society of Accountants and Auditors. Also, from Canada: Mr. John Hyde, president of the Dominion Accountants' Association; Mr. J. W. Ross, president of the Associated Accountants of Montreal; Mr. F. H. Macpherson, F.C.A., of Windsor, and Mr. P. S. Ross, of Montreal. The six gentlemen last named were official guests of the Federation of Accountants of the United States of America, who conducted the Congress.

The object of this gathering was the reading of papers of professional interest to men engaged in the occupation of auditing and accountancing, and the discussion of such papers. The gathering resulted in the submission of valuable papers and in the interchange of much valuable experience. Mr. Hyde, of Montreal, made a brief but brisk address, dealing mainly with the history of the profession in Canada. Mr. Wilkinson, a man of marked experience and ability, who was secretary of the Congress and secretary of the Federation, read a paper on the C.P.A. movement in the United States, and Mr. Martin led in the discussion upon it. Among the principal papers were one entitled: Brief History of the Movement Toward Uniform Municipal Accounts," by Harvey O. Chase, of Boston. Another, "The Municipal Balance Sheet," by Henry W. Wilmot, A.C.A., C.P.A., of New York. "Revenues and Expenses, as Distinguished from Receipts and Disbursements, in Municipal Accounting," by F. A. Cleveland, Ph.D., New York. "Appropriations," by Ernest Reckitt, C.P.A., of Chicago. The letters we have quoted above, "C.P.A.," mean Certified Public Accountant, and are applied to those who by examination receive a certificate from the governments of the states in which they live

THE INSURANCE ACT.

There appears in the recently issued Report of the Superintendent of Insurance for the Dominion, the following significant statement relating to the Insurance Act:—

It is probable that a revision of the "Insurance Act," at an early date, may be considered expedient and necessary. The officers of many of the Canadian companies have within the past two or three years advocated an alteration in the provisions of the statute relative to the investment of funds, not only as regards the class of securities which may be purchased or loaned on but also the proportion of such funds which may be invested in other than Canadian securities; but opinions have differed somewhat widely as to the amendments needed, each company naturally urging such changes as would meet the supposed necessities of its particular circumstances; some even going the length of favoring absolute freedom of choice, without restriction of any kind. The question is of much importance, and should not be hurriedly dealt with. In the meantime, however, it would seem that the existing provisions of the statute are sufficiently wide to afford reasonable scope for safe and profitable investments. Whether an enlargement or a curtailment of the present powers, or an enlargement thereof in one direction and a curtailment in another is ultimately considered the more desirable, it may not be improper to point out that it is of the utmost importance for every company to keep within its legal powers of investment whether conferred by the Companies Act of Incorporation or by the "Insurance Act," and that, apart altogether from any other consequences which may result therefrom, the directors of a company are personally responsible for any loss that may arise from an unauthorized investment. Certain changes other than such as may relate to investments, which need not here be specially referred to, while not urgent, seem desirable and might be advantageously made.

* * *

A COLOSSAL INDUSTRIAL ENTERPRISE.

While there is, in the meantime, of necessity, much that is confused in the appearance of the temporary works, at Niagara Rapids, of the Electrical Development Company of Ontario, it is tolerably clear from their illustrated pamphlet that the company do not intend to have anything ugly or even disorderly about their premises. On the contrary, if the reader

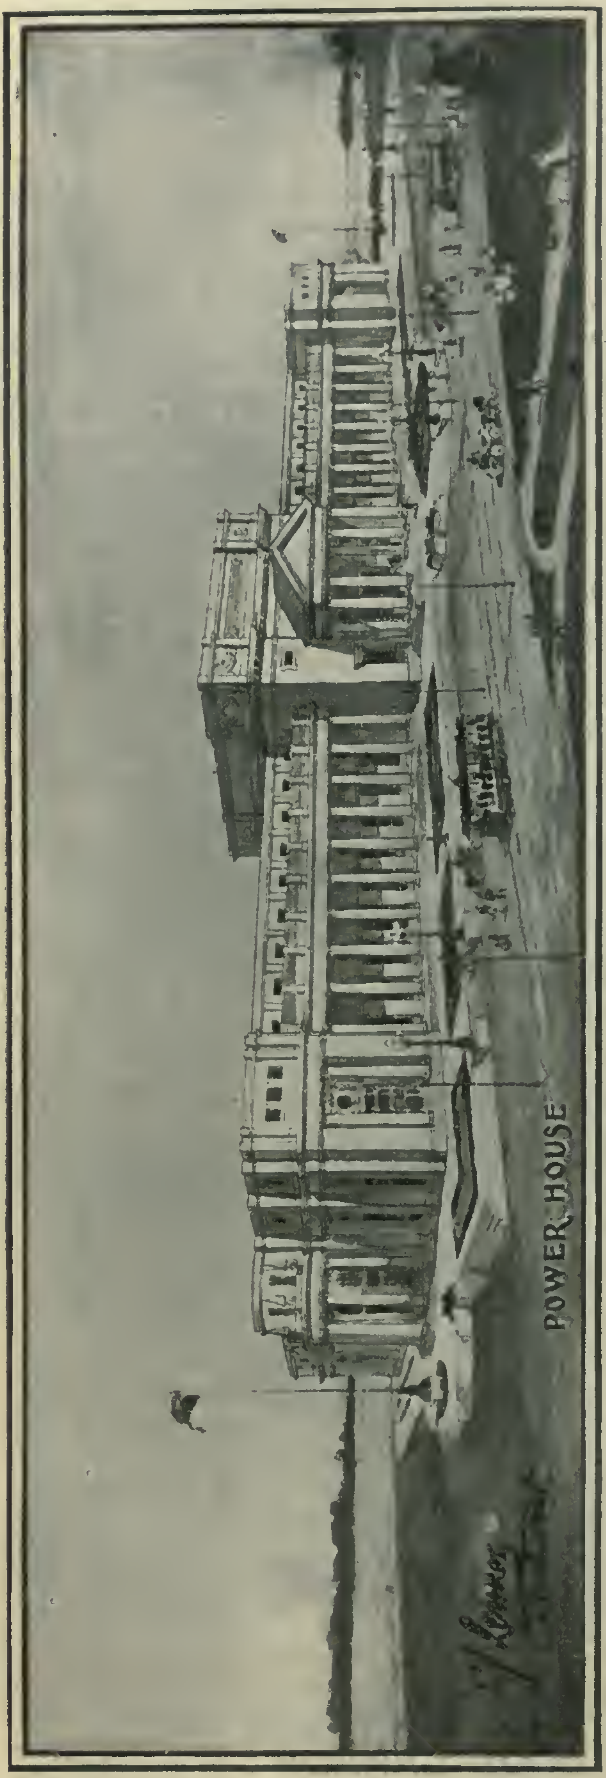
LONDON ENGLAND—The National Bank of Scotland.

will look at the illustration we give to-day of the power house to be erected on the Canadian shore of the river, he will admit that a handsome structure is there depicted. It reminds one of the Treasury at Washington, or might be well termed an elongated version of the Leeds town hall. So far from being a mere bare stone rectangle, as one somehow expects houses for such purposes to be, it has graceful colonnades and is good to look at from any point of view. We are aware that it was insisted upon, and properly insisted upon, by the Commissioners of Queen Victoria Park that the company erect a building which should not detract from the appearance of the park. But the company has done more, or at least their construction plans promise more, for the building will enhance the appearance of that portion of the park, and be architecturally of a dignity in keeping with its situation so near the great cataract.



Elevation of Power House, 500 feet in length, at Niagara Falls, of the Electrical Development Company of Ontario, Limited.

"The style of the Italian renaissance has been adopted by Mr. E. J. Lennox in the plans, which the Government and the commissioners have approved. The building will be about 500 feet long, 70 feet wide, and 40 feet high. The front facade will show a high centre bay and two end bays, and in each of the two spaces there will be a loggia with a colonnade. Through large windows in the front and at the ends of the building the public will be able to look down into the machinery room. The rear facade will be plain. A sodded terrace, interspersed with flower-beds, will surround the structure, adding to its beauty. 'As it will only be a few yards from the electric car line, and affords an excellent view of the rapids, just above Niagara Falls, there is little doubt that the power-house will become one of the sights of the Falls."

In a previous issue, the wheel-pit was mentioned, of which huge hole in the rock we hope to give an illustration. But a still more wonderful piece of daring work is the tunnel which will convey away the waste water from the wheel pit, because the tunnel is below the surface, 150 feet down, and is some two thousand feet in length. It deserves a descriptive article to itself, if we had the space to devote to it. In its design the fact has been regarded that the Horseshoe Falls are constantly receding. "The lining for the first three hundred feet from the outlet will be put in in rings six feet long, so that as the Falls recede and the tunnel shortens by the breaking away of the surrounding rock, the lining will break away in clean sections and leave a smooth surface at the new end of the tunnel. For the rest of the distance the lining will be of hydraulic pressed brick. In the crown of the tail-race tunnel there will be constructed a light gallery for observation purposes, allowing an inspection of the interior at any time without having to shut off the flow of water. The engineers consider that the plan of the tunnel, being quite straight, will prevent any special erosion of the surface of the lining which would be brought about by a change in the direction of a large body of rapidly moving water."

* * *

—Few people realize the importance of the irrigation work which is now going on in Western Canada. We note that work is being pushed vigorously on the new seven miles' extension of the Milk River Canal. Water will be led from near Milk River ridge for seven miles northwesterly, from which point it will be diverted towards the east, and create a series of valuable lakes for stock watering and agricultural purposes near the Assiniboia boundary.

* * *

—Representatives of several Canadian railroads were present at a meeting in Ottawa on Tuesday last, to consider a circular received from the Railway Commission suggesting uniform rules for the operation of trains on all Canadian roads. The suggestion was approved in principle. The uniform regulations suggested include the block system of signals, automatic switches and other devices calculated to greatly minimize the liability of accidents. Among other things suggested is that train hands shall not work more than a specific number of hours whether or not they are willing to do so.

* * *

—Mr. Seymour Bell, one of the British commercial agents in the United States, claims that while great endeavors have been made in that country to get rid of surplus products in foreign markets, a notable exception has been the manufacturers of iron and steel. Contrary to their usual practice, these gentlemen have curtailed output and so prevented the dumping which was generally anticipated. Why have they done this? Mr. Bell says that dumping has been suspended for political reasons, the object being to stifle any agitation in reference to the tariff question. Apparently, if this be true, there is a growing movement across the border for cheaper goods, even although it is clear that this benefit must be secured by the sacrifice of full employment, for that is the plain English of "curtailing output."

Mercantile Summary.

Work on the foundation which is being dug, for the new Gutta Percha and Rubber Company factory, on O'Hara Ave., Toronto, was begun last Monday. The building is to be 180 by 152 feet, four stories in height, and to cost probably $100,000.

The J. J. Case Manufacturing Company, of Racine, Wis., have bought a large block of land fronting on the Kaministiquia river, near Fort William, Ont., upon which they intend to erect a factory to employ about four hundred hands, together with houses for their employees.

Property owners of Merritton, Ont., have passed a by-law, by a large majority, which exempts the Lincoln Paper Mills Company from taxation for ten years. This company has taken over the property known as the Lybster Cotton Mills, and will expend thereon the sum of $250,000 in converting it into an extensive paper factory.

The business of the Imperial Paper Company, at Sturgeon Falls, Ont., has increased to such an extent that the management is talking of increasing the facilities. The present output is 48 tons of paper per day, and they have had sometimes to refuse orders recently. Mr. John Craig, the manager, has gone to England to discuss with the directors plans for extending the plant.

There was a sale of South Africa sheepskins held in London on the 7th inst., at which the offerings numbered 130,600 skins. Of this number 116,801 were sold. There was a fair demand from home and foreign buyers and prices were practically unchanged. Western province long wooled was occasionally 1-8d. higher. Lower grades were fractionally dearer. Coarse was scarce and sold at full rates.

At the annual meeting of the Lake of the Woods Milling Company, held a few days ago, in Montreal, it was remarked by Mr. Robert Meighen, the active manager, that not a bushel of wheat had been purchased by the company for speculation, nor a dollar of profit made by that means. Business has been confined to the purchasing of what was necessary for the mills. The annual statement for the year ending August 31st last, was presented and found satisfactory. The new board of directors is to be elected on the 26th inst.

It transpires that the consumption of spirits, beer and tobacco in Canada during the fiscal year ended June 30th last, increased largely, as compared with the record of the previous twelve months. The total consumption of spirits last year was 5,343,954 gallons, yielding a revenue of $11,145,933. The consumption of beer was 27,608,518 gallons, and the revenue $1,264,226. Of wine, 537,044 gallons were consumed, from which $285,458 was derived. Fifteen million five hundred and twenty-one thousand and two pounds of tobacco, cigars and cigarettes were smoked, while the revenue which resulted was $5,853,124.

The beet crop in the neighborhood of Raymond, Alta., is this year giving highly satisfactory results. The dry season has proved very favorable to the proper ripening of the beet, and the roots are extremely rich in saccharine properties. The harvest will be 3,000 acres, which is expected to yield from 10 to 12 tons an acre. This will ensure a campaign of not less than 75 days. Digging has already begun, and all available help has been mustered. Two hundred Blood Indians of various ages are assisting in taking off the crop.

Mercantile Summary

H. R. Coleman, of St. John, N.B., dealing in groceries and meats, has suspended payment, with liabilities approximated at $4,500. He is expected to make an offer of compromise.

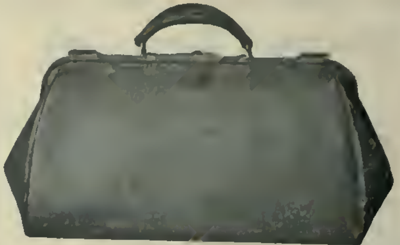
The Cast Stove and Supply Company, Limited, of Hamilton, has been incorporated with a capital of $100,000. M. A. Pigott and T. J. Stewart, of Hamilton, are among those interested. They will build cement structures and parts thereof, and manufacture and deal in paving blocks and building materials.

The following is a list of patents taken out recently by Canadian inventors: Nos. 89,304, Ernest C. Thorschmidt, Brooklyn, N.Y., machines for applying hoops to casks or barrels; 89,320, Messrs. Thielmann & Meisenburg, Duisburg, Germany, frame work for mine heads, with movable base for wagons, rising, running and stopping automatically; 89,371, Andre Blondel, Paris, France, electrodes for arc lamps with multiple zones; 89,376, Wilbur Gordon, Tweed, Ont., head for feed trough; 89,387 Churchill H. Fox, Fredericton, N.B., insertible saw teeth; 89,482, Bernhard A. O. Prollius, Copenhagen, Denmark, centrifugal apparatus.

Moses Fineberg, doing business in Montreal, under the style of the Star Shirt and Overall Co., has assigned upon demand. He had formerly been doing a fresh meat business, and engaged in present line six or seven years ago. The liabilities are estimated at as much as $15,000.——W. Balacan & Son, formerly making babies' bibs in a small way, in Montreal, and for the past year engaged in the making up of cheap clothing, have also assigned.——A demand of assignment has been made upon C. Wecksler and Solomon Brunberg, doing business in Montreal as the Canadian Fur Mfg. Co. They began business in a small way a year or so ago, and during the past six months have been frequently sued.

An offer of compromise at the rate of 50 cents on the dollar is made by L. Livingstone, dealing in clothing, etc., at Digby, N.S. The business is a comparatively small one, he doing more or less peddling, while his wife tended store.——O. C. Giffin & Sons, doing a general business in a shop at Isaac's Harbor, N.S., are reported to have assigned. The business was started last year; Captain Obed Chute Giffin is a master mariner, with perhaps credulous views of business, and his two sons are young men without experience of merchandising. The establishment must have had, we should think, a good deal of the flavor of Sol Gills' shop and Cap'en Cuttle's supervision as related in Dombey & Son.

The Huronian Company, which was recently formed by interests connected with the International Nickel Company, New York, for the purpose of building and operating an extensive power transmission system, between Turbine, Ont., and the plants of the Canadian Copper Company (which is also connected with the International), at Copper Cliff, have awarded an important contract to the Crocker-Wheeler Company, a New Jersey concern, for two 2,000-kilowatt alternating current Brown-Bouvarie generators. These machines will be directly connected to 3,500 horse-power water turbines, which are still to be contracted for. Power will be derived from High Falls, on the Spanish River, which are capable of developing about 15,000 horse-power. The transmission line will be about 30 miles long.



BRIEF BAGS

When you see a man carrying a very fine JULIAN SALE bag it does not mean that it was expensive — the chances are that he paid less for it than if he had bought an ordinary bag. Here is our brief bag proposition:

For $5.00

we give the regular 18 inch size in the finest natural grain leather, sewed in frame with trimmings that will not tarnish. Heavy leather linings.

For $6.00

18 inch bag, wider than usual, and heavy frame.

For $7.00

18 inch bag, deeper and wider, with heavy frame. Gold lettered without charge. — Express paid in Ontario.

JOHN R. BARBER

Mercantile Summary.

The Edmonton (Alta.), Brewing and Malting Company are extending their works, by the addition of cooling and cold storage rooms. Both structures will be of brick.

Lewis Bros. & Co., the wholesale hardware house, of Montreal, have secured a large site for a warehouse in Winnipeg, on which they will erect what is expected to be one of the finest buildings in its line.

The Pere Marquette Railway Company has made another offer to the London city council for the renewal of their old lease. The old terms, however, were not considered sufficiently attractive, and the matter remains in abeyance.

On Tuesday last there were two fires in Hamilton, neither very serious. One was in the factory of the Canada Biscuit and Confectionery Company, the whole ground floor of which was gutted. The loss on building and contents is estimated at $4,000. The other was at the theatre in Mona Park, and is attributed either to incendiarism or to a defect in electric wiring. The loss was in this case about $5,000 or $6,000.

The Ontario Government has granted a charter to the Canadian Lead Company, Limited, share capital to be $1,000,000; headquarters at Toronto. It proposes to carry on the business of mining, milling, smelting, and dealing in galena and other minerals. Among the provisional directors are W. H. Eccles and J. H. Vamplew, of Toronto.

The weekly "grist" of country failures in the province of Quebec is as follows: A firm of general dealers, at Les Eboulements, G. Audet & Co., are reported embarrassed, and seeking a compromise on liabilities of $2,900, with assets shown of $2,600.——J. A. Lafrance, who began storekeeping at Grande Mere, only last spring, has already become involved, and makes a proposition to pay his creditors 30 per cent. of their claims, which amount to $2,250 in three months.——The assignment is noted of W. L. Bergeron, general storekeeper, St. Flavien. The business was started in January, 1903, as Sevigny & Bergeron, who dissolved the following September. Bergeron is said to be without business experience, having previously worked on a farm with his father. He appears to have imbibed the always popular notion that "anyone can keep store."——S. Viner, clothing, etc., at Rimouski, lately insolvent, is trying to arrange a settlement with his creditors at 40 cents, in instalments, payable in two, four, and six months. His liabilities amount to $6,435.——At Ste. Sophie de Levrard, Telesphore Perrault, general merchant, has assigned. Some ten years ago he was in business at St. Pierre les Becquets, but not finding it profitable he gave up trade, after a short experience, and went farming. The fever of storekeeping, however, again struck him in September, 1903, and he opened up a general stock at his present location, only to have his previous experience repeated with emphasis.——Another brief business record is that of Arthur Gagnon, who, with some fair amount of experience as a clerk behind the counter, started in the dry goods line at St. Romuald in March last. His assignment is already announced.

Mercantile Summary.

The Belleville rolling mills closed down a few days ago and part of its product and fuel are advertised for sale for taxes on the 24th inst.

We are told that, as a result of goods supplied by the Ontario Wind Engine & Pump Co. to the Imperial Government during the last seven or eight years, this firm received this week an enquiry for their famous Canadian airmotor from the Imperial Government in one of the Crown colonies of West Africa. The satisfaction this type of windmill has given its patrons has caused it to be known all over the world. It is always well for Canadian manufacturers to see that their goods are in quality such as will reflect credit upon the Dominion.

A despatch from Moncton says that great interest has been awakened during the past few days in the petroleum resources of New Brunswick, as a consequence of the strike of oil in Kent County. The fields in Westmoreland and Albert are developing very rapidly, and Toronto capitalists, we understand, have obtained a lease of a large area on the Albert County side of the Petitcodiac river. This district has been partly developed, and is known to be underlaid with oil. Four good wells have already been struck, and large expectations are entertained of the outlook. Abundance of capital is available for developing the field, and it is hoped that work will be proceeded with on a large scale at once.

Montreal city council is considering a proposition to extend the Montreal Gas Company's franchise for a period of ten years, in return for a reduction in rates for gas. The prices which it is hoped may be made for gas are, for the first year, beginning January 1st next, $1.15 per thousand feet, a reduction of 5c. on present rates; for the second year, $1.10; for the third, $1.05, and from that time until the proposed expiration of the lease, on May 1st, 1920, a flat rate of one dollar, though possibly 90c. for stove gas would be asked for. Considerable difference of opinion is expressed by aldermen upon the proposition, one objection being the fact that during the next few years improvements may possibly be made in the production of gas which would bring down its cost very materially, in which case for the city to have to pay $1 would be tying it down to an absurd degree. Another plan under discussion is the expropriation of the company.

⁂

—A royal charter has been granted the British Cotton-Growing Association. The history of chartered companies in Britain has not on the whole been very encouraging, but the looked-for results in this case are so important—primarily the riddance of a great industry of the incubus of American manipulation—that something better is looked for. So far, the reports coming to hand from parts of the British possessions where attempts have been made to grow cotton, have been favorable. The Association starts its existence with a guaranteed fund of £50,000.

UNDERWOODS Always on the Top

Adelaide St. East and neighborhood is the Mecca of the Typewriter industry of this city. The number of establishments devoted to the sale of machines and supplies is being constantly increased. Among all these there is one stands out with peculiar prominence, that of the United Typewriter Co., Limited. The growth which has attended this company during the short time of its existence is remarkable.

To a great many people all typewriters look alike; but there are important differences in machines. That is why the Underwood has become, and continues to be, such a favorite among the best and most intelligent operators in the country. The increase in the number of Underwoods in practical use is a most pronounced testimony to that machine's superior design and construction.

As showing the success which has attended this go-ahead concern it will be interesting to give some figures. During the month of September, 1903, 87 Underwood machines were sold; during September, 1904, no less than 175 were sold, more than double. The total business done by the company during September, 1903, was $10,642, while for the corresponding month of 1904, the business done amounted to $21,000. Not only is this true of the Toronto end, but the sale of Underwoods is showing the same steady increase all over the world.

Mr. J. J. Seitz, the general manager of the United Typewriter Co. has just returned from a trip to the St. Louis Exposition where the Underwood exhibit leads them all. The display there is constantly surrounded by a throng of admirers.

CANADIAN WEST INDIA STEAMERS

Sail from Halifax for Bermuda, The Windward Islands and Demerara every other Monday, and for Jamaica once a month.

The demand for Canadian goods in West India markets is constantly growing, and prospective exporters should inquire as to freight rates by this line.

PICKFORD & BLACK,
HALIFAX.

TORONTO MARKETS.

Toronto, October 13th, 1904.

Chemicals, Drugs, Etc.—On the whole, trade may be described as quite fair, with values continuing satisfactorily steady. There is little demand for opium, except for what is needed for immediate requirements. There are some more bark sales coming on in London this week and until the trend of prices prevailing thereat become known, busines in quinine will not likely be in large volume. Carbolic acid is firmer. Cantharides is another strong feature and so is ipecachuana. In New York no very notable feature has developed on the market, and there is practically no speculative element in the demand for any staple. In Great Britain the chemical trade is described as little changed from what it has been during some months past. The export branch, however, seems to show some signs of coming improvement.

Dry Goods.—Fair activity is to be noted in the demand for heavy woolens and such goods, due, perhaps, to the comparatively cool weather last week. All these articles, together with blankets, heavy dress goods, etc., are quite firm in price. In good demand are winter overcoatings, which in style are very similar to those worn last year, though a good many browns are shown. It is doubtful, however, whether this will prove popular to the end. Cotton goods continue distinctly firm at last quoted prices. Some people think, indeed, that recent reductions were made too soon. The mills are, as a rule, very busy.

Flour and Grain.—Momentary quietness prevails in the flour market. The reigning price for ninety per cent. patents is $4.35 to $4.45, in buyers' covers. Hungarian patents (Manitoba), is $5.70, in buyers' bags, f.o.b., Toronto. Not much appreciable change has occurred in bran or shorts. Oatmeal is quiet, but quite steady. Both Ontario and Manitoba wheat is firm, but not a great amount of business is passing, the price being too high for millers. Values are a little lower than a week ago. The only change in grain is in rye, which is 2 to 3c. higher.

Hardware.—A good volume of trade is going on. Travellers report good prospects for the balance of the season, and mail orders are in good compass. In the heavier lines the movement is fully up to average. Tinplates are steadier than they were. Not much change has occurred in pig iron. Tin ingots are quite firm.

Groceries.—No complaint to amount to much is being made as to the business being done generally throughout the country. Sugars are moving fairly well, and prices are steady in sympathy with New York. In teas, while trading continues on a somewhat restricted basis, values remain steady. Dried fruits are attracting some little interest. Prunes are quite cheap, and a good trade is being done. Currants are firmer. Raisins are easy, perhaps because a high range of values curtailed the demand somewhat. Practically all canned goods are steady and strong. The poorness of the season for several vegetables is probably to blame for this. Payments have been about normal.

Hides and Skins.—As in Chicago, hides are quite firm, and a moderately good business is being done. Lambskins have gone up 5 to 10c., though receipts are large. Calfskins are quiet and no change is announced. Tallow is inclined to easiness.

Live Stock.—Offerings still continue in the main to be of poor qualities. For butchers' and export cattle, prices have managed to keep fairly steady in spite of this, but for stockers and feeders values are easier. There is a fair demand for milch cows of good grade. Trade in sheep and lambs was fairly active. Calves are about the same as last week.

Provisions.—The receipts of butter are rather large, and promise to continue so during the fall. Choice grades are wanted. Cheese is steady, without any rising tendency so far as can be discerned. Eggs are still quite high and rather scarce. For poultry there is a good market with not much good stock coming forward. Spring chickens fetch 11 to 13c., old birds, 8 to 9c. Ducks are in about the same condition at 9 to 10c. New crop hops are quoted at 28c. or 32c. for best quality, but not much of the latter is in the market. Stocks of hay products are light, and not very many live hogs are coming forward, the season for finishing being late. There is good demand for smoked meats of all kinds, and prices are good.

Wool.—While prices continue good, the receipts are light, probably because stocks throughout the country are light. Indeed for some two or three weeks past, very little actual business has been transacted. A few lots of wool have actually been imported into Canada from the Old Country, owing to the prohibitive prices asked for domestic wools.

⁂

UNITED STATES FINANCES.

Henry Clews & Co., in their weekly circular, under date of New York, October 8th, 1904, say: Powerful manipulation and a good supply of favorable news combined to stimulate the market into greater activity, the only check to a further rise being the outpour of stocks from both inside and speculative sources, which caused more or less erratic fluctuations. History is once more repeating itself in the stock market, and at last the confidence so persistently displayed by insiders for months is extending to the outside public, simply

because current developments prove that this confidence had been based upon actual conditions of which the leaders naturally possessed previous knowledge. The week has been fruitful in favorable developments. A number of very satisfactory railroad reports were forthcoming some of which showed gratifying gains in gross earnings, others important reductions in operating expenses, while others have joined or promised to join the ranks of dividend-payers. All of these disclosures prove that the railroads, as a whole, are enjoying continued prosperity.

The rise in the market has now been carried to a pitch where sharp reactions are inevitable, and yet the situation at this writing appears so well in hand that the leaders are quite likely to resume the upward movement. One thing may be taken for granted, and that is, with so much success behind them those in control are not likely to stop until the rise has been pushed to the extreme limit. If this should be their policy there is nothing in sight to check it except sudden desertions from the bull ranks, or else a sharp contraction of the money market. Neither of these contingencies is very probable just now, for the public have only recently come into the market and the surplus holdings of the largest financial interests have not yet been sufficiently distributed and until they are the market will not turn. The situation in the money market is not yet unfavorable to present bull operations. Though loans are at high water-mark, and though the reserve was cut in half long before the crop demands had reached their maximum, the surplus is still much above the average at this season and the margin of safety has not yet been exhausted. The money market is just now largely controlled by the same financial and banking interests who are engineering the current rise and who are quite likely to be among the first to appreciate monetary limitations. Nevertheless, the first indications of a turn will come either from heavy inside selling or contraction in the money market. One of the main sources of buoyancy is the increasing supplies of money.

* * *

A STORY FORM UNCLE REMUS.

Joel Chandler Harris, the author of "Uncle Remus," is fond of stories illustrating the love of the average darkey for long words of whose meaning he is often ignorant.

"A friend living in Georgia," says Mr. Harris, "has in his employ as a house servant a venerable and polite old darkey, one of the ante-bellum type.

"On one occasion the friend in question was startled by the announcement from his servant that:

"'De gastronomikul gen'lmun desires to see yo', sah.'

"The master made no reply, but gazed at his servant in a way that clearly indicated his perplexity as to the meaning of the expression used.

"'De gastronomikul gen'lmun, sah,' repeated the old chap most gravely. 'I understands, sah, dat he desires to see yo' 'bout de gas meter dat's out of order.'"

CIGARETTES
STANDARD OF THE WORLD
SOLD BY ALL LEADING WHOLESALE HOUSES.

The Canadian Pacific Telegraph Company announces the completion of the cable between Sitka and Valdez, and business will now be accepted for points in Alaska, at greatly reduced rates from Seattle.

Mr. J. A. Goddard, of Toronto, is utilizing the automobile idea in a striking manner—unique so far as this country is concerned, we believe. He is making an automobile furniture removing wagon, capable of speeds of two, four and six miles per hour. The body of the vehicle measures 22 ft. by 6 ft. 6 in., the motive power being a powerful gasoline engine.

The United States Steel Corporation is said to have exported, since October 1st, nearly 35,000 tons of iron and steel products. Its total exports for the month are expected to exceed 130,000 tons, including about 30,000 tons of steel rails for Canada.

Some days ago, the property owners of Waterloo, Ont., voted on two by-laws, one a grant of aid by way of a loan of $15,000 for fifteen years to the Canada Furniture Manufacturers, whose factory was recently destroyed by fire. The by-law carried by a big majority, only 81 voting against it, while 426 were in favor of it. The other by-law was a vote for $20,000, $11,000 to purchase the present Gas Company's plant, and $9,000 for extension. It carried by a vote of almost two to one.

MONTREAL MARKETS.

Montreal, 12th Oct., 1904.

Ashes.—Owing to the very light receipts of potash now coming to hand, good tares of No. 1 sorts would bring about $5.85 to $5.90; seconds, $5.40 to $5.45. There is still an absolute scarcity of pearls.

Dairy Products.—The tendency to weakness shown in the cheese market last week has apparently been checked in some degree and values have steadied a little, presumably due to the belief held in some quarters that the fall make will prove to be a comparatively small one. The actual present demand from England is light, and though last week's shipments were fairly large, the bulk of the goods are reported to have been from stock held on English account. The figures of exports for the past week were 103,281 boxes, one of the few instances this season in which they were larger than the corresponding week last year, but there is still a shortage of 387,800 boxes to make up. Butter is weaker, and English advices are of a somewhat discouraging tenor. For finest Townships 19½ to 19¾c. is about the figure; good Quebecs, 19 to 19½c.; dairy, 15 to 15½c. per pound. Last week's exports were 26,187 packages, 9,700 more than for the same week in 1903.

Dry Goods.—Sorting business has been rather better during the past ten days, but retailers speak of September having been a dull month, and a spell of sharp, bright weather is needed to make sales active. Travellers in the country are booking some fair orders for certain lines of spring goods, such as prints, cottons, carpets, etc., but are not as yet carrying full lines of spring samples. With regard to the values, not a change of any kind is reported.

Furs.—There is nothing doing in raw furs as yet. First offering of fall rats, coon and mink are hardly expected for another fortnight or so, and prices have not yet been fixed. The London October fur sales have been set for the four days from the 25th inst. to the 28th, and in some quarters some proportion of a decline appears to be anticipated.

Groceries.—The movement is not marked by any snap, though a fair aggregate of moderate orders is reported. The "Escalona," with first direct supplies of new currants and Valencia raisins, has been reported at Sydney, and is due here on Monday. The "Jacona," the second direct boat, is now taking on cargo at Denia. For fine off-stalk Valencias from 6 to 6¼c. quoted; layers, 6¾ to 7c.; Filiatra currants, in cases, 4¾c. Though the New York market showed some decline last week, local quotations have been maintained at $4.65 for standard granulated, with soft sugars ranging from $4.05 to $4.45; on account of the easier market, the demand at the refineries is not particularly brisk just now. Molasses is held very firmly at 28 to 29c. in a jobbing way by the puncheon. Prices of canned tomatoes and corn are very firm, wholesalers having agreed to quote $1.25 for the former, and $1.20 for the latter.

Hides.—The market is without change of any kind. Tanners are fair buyers of hides at 9½c. for No. 1, dealers paying half a cent less, and there is no accumulation of stocks. For lambskins, the quotation is 80c.

Leather.—The existing demand from shoe manufacturers is just moderate, but fair business is reported with leather jobbers, and tanners of sole are finding good enquiry from Great Britain, shipments in that direction being reported quite liberal. Prices are all steady at former quotations.

Metals and Hardware.—The demand for pig iron is fairly brisk just now, as foundrymen and large manufacturing concerns are looking about for fall supplies, and some good-sized sales are reported at $19 for No. 1 Summerlee, from $18.25 to $18.50 for No. 2 Summerlee, $16.50 for No. 3 English iron, and about $18.50 for domestic brands, such as Londonderry and Midland. Domestic bars are quite firm, there being some reported shortness of stock, and some dealers are indisposed to entertain business at any figure under $1.70. Iron pipe, however, is easier at $4.07 for inch. Boiler plate remains at $2, and tank steel at $1.90. Canada plates are fairly firm at $2.25 to $2.30, and galvanized Canadas at $3.95 for fifty-twos', and $4.20 for sixties. Tinplates, galvanized sheets, etc., remain as last quoted. Ingot tin keeps on stiffening, and is quoted at 31½ to 32½c., in a jobbing way, and copper is very firm at 13¾ to 14c.; lead, $3.25;

spelter, $5.75; sheet zinc, in casks, $6.20 to $6.25.

Oils, Paints, and Glass.—Orders in these lines are reported as being on the small side. The feature of the week is a further strong advance in glass, Belgian makes being now quoted at $3.25, instead of $3.20, per 100 feet, for first break; second break, $3.45. Oils, turpentine, etc., remain without change.

* * *

A VANISHED MERCANTILE AGENCY.

Last month we devoted half a page to the much-turned-over affairs of the International Mercantile Agency, which had made much fuss and done some business in Canada as well as the United States. A former president, named T. N. McCauley, sued the concern for a loan of $54,220, also for an accounting by a board of alleged 'dummy directors." Then a stockholder in Hamilton caused the arrest of McCauley for larceny. Later about the concern is contained in a special to the Mail from New York saying that this "$3,000,000 mercantile agency" was sold at public auction in that city a week ago for $26,000. The sale was conducted by Receiver George R. Beach, who proposed to auction the belongings of the company in separate lots. He first put up the reports of the financial standing of many thousands of firms throughout the United States and Canada. These were supposed to have cost $1,200,000 to collect. The highest bid was $10, which was refused. Receiver Beach refused to accept this bid, but divided the property into two lots. In the first lot everything except the outstanding accounts was included. The second lot consisted of the accounts due. The first lot was sold to Charles H. Barritt, of Philadelphia, for $23,000, and the second lot to the same purchaser for $3,000, making Mr. Barritt the sole owner of the entire corporation. Who will be the next smart fellow to get up an "up-to-date" Mercantile Agency and make a million or more of profit out of it? The commercial public seems to bite very easily.

* * *

OUR TRADE WITH THE UNITED STATES.

The statement of the United States exports to Canada for the fiscal year ending June 30th, 1904, shows a total of $131,274,346, while the Canadian statement of imports from the United States, which should include only articles classified as exports from the United States to Canada, shows a total value of such imports of $143,010,578, or a total of $12,000,000 greater than the United States statement. An examination of the Canadian and United States figures for other years also shows material differences of statement.

This is not an unusual development in comparing the export figures of the United States with the import figures of other countries.

While the figures of the Canadian Government and those of the United States differ somewhat as to the values of the commerce passing between them, they sufficiently agree to show that the growth of that commerce has been very rapid. Exports from the United States to Canada have increased, according to the figures of the United States, from $24,000,000 in 1854, to $131,000,000 in 1904, a period of 50 years. Most of this growth, however, has occurred in the last decade. From 1854 to 1894, a period of 40 years, the increase, as shown by the figures of the Bureau of Statistics, was but $32,000,000, the figure for 1894 being $56,000,000, while from 1894 to 1904, a 10-years' period, the increase was $75,000,000.

The table which follows shows the trade between the United States and Canada from 1850 to 1904:

	Exports to Canada.	Imports from Canada.
1850	$ 9,515,991	$ 5,179,500
1860	22,695,928	23,572,796
1870	25,339,254	36,265,328
1880	29,460,257	32,988,564
1885	38,245,634	36,695,685
1890	40,282,108	39,042,977
1895	52,854,769	36,574,327
1900	95,319,970	39,369,074
1901	105,789,214	42,482,163
1902	109,642,993	48,076,124
1903	123,266,788	54,781,418
1904	131,274,346	51,406,265

—Boston News-Bureau.

TRADE OPPORTUNITIES.

The following were among the enquiries relating to Canadian trade received at the Canadian Government Office, in London, during the week ending 28th September, 1904:

Enquiry is made by a London firm for names of good, reliable makers in Canada of oak panelling and similar goods. A firm of butter importers, who find there is an opening for Canadian produce in their locality, desire to be placed in communication with some of the best and largest butter producing dairies in Canada with a view to a regular consignment business during the season. A large firm of fruit and produce brokers have asked to be placed in touch with apple growers in Canada seeking to export fruit for the English market. An Eastern Canadian house has asked to be placed in communication with reliable exporters in Great Britain of ebony brushes, mirrors, rubber combs, sponges, etc., and with large jobbers dealing in such goods as would be sold in drug stores. A firm of manufacturers' agents in Ontario are seeking to establish connections with some English houses, who require purchasing agents in Canada for raw and manufactured materials. They are also prepared to act as agents in the Dominion for English made goods.

THE IRON AND STEEL MARKETS.

Confidence is the keynote of present trade, says the Iron and Machinery World. It is of comparatively recent origin and has certainly had rapid progress in the past week or two. It is confidence mainly in the future, but the influence is already extending to current transactions. There is at least moderate improvement in the purchases of most lines of iron and steel material both for immediate and most remote deliveries. Pig iron trade in most if not all markets is nothing other than active. Melters are everywhere impressed with the idea that this is the time to buy and they are accordingly placing their orders with greater freedom than at any time in perhaps eighteen months. They are seeking to bind sellers to long-time contracts, but rarely succeed to the full extent desired. Miscellaneous consumption of iron and steel grows. In the east there has been some buying of steel cars. And in most finished steel products an increasing interest among the consumers has been awakened. It has reference mainly to future wants, but to a modified extent is influencing present orders. There is a general shaping of things for 1905 or earlier in the winter. The minor metals are sharing in these conditions. Exports of copper are unusually heavy, those for September being reported at 20,489 tons, and for the first nine months of the year 178,909 tons, against 94,880 tons for the corresponding period last year.

* * *

—The terrible disaster in the St. Clair submarine tunnel, connecting Sarnia with Port Huron, by which six railway employees were asphyxiated, and several others seriously injured, has caused a general cry for some different arrangement, under which such fatalities will be impossible. The use of electricity is fav-

ored by many, so as to obviate the poisonous gas fumes, but the railway authorities claim that upon investigation they cannot discover any really efficient system of so doing. The railway commission appear to be impressed with the advisability of using electric motors for haulage through the tunnel.

* * *

—The cloud which has hung over the lace trade of Nottingham for some time does not look like lifting just at present. Shopkeepers of all kinds, as well as people in the wholesale trade, are complaining of the badness of trade, showing that people are short of money even for the necessaries of life. Taken as a whole, there is more dissatisfaction with the home trade than there is with the export, and in the former case orders are very difficult to obtain. Owing to the slack demand there is not much encouragement, says the Drapers' Record, for manufacturers to produce novelties in fancy millinery laces, and what orders are placed are for Torchons and Valenciennes in linen and cotton, of which at present there is a superabundant supply in the market. Good quantities of loop edgings, Bretonne laces, and crochet goods are selling, but at prices which leave little margin of profit. Mosquito nets, bobbin nets, and spotted nets are firm in value, and large quantities are required for export and for millinery purposes. Mechlin, Brussels, and

THE CANADIAN PACIFIC RAILWAY COMPANY

Issue of New Ordinary Capital Stock.

Pursuant to resolution passed at the Special General Meeting of the Shareholders on 5th October, 1904, an issue of $16,900,000 additional Ordinary Capital Stock has been ordered by the Board of Directors.

The stock will be offered to the Shareholders of record at the closing of the hooks for the purpose, at par, on the basis of **20** per cent. of their respective holdings. The books of the Company will he closed for this purpose at Three p.m. on THURSDAY, the 27th day of October, 1904, and reopened on FRIDAY, the 11th day of November, 1904. Stock upon which payments have been made in full as called, will rank for dividend tor half-year ending June 30th, 1905. A circular containing the terms of subscription, payments, etc., and enclosing warrants of subscription, will be mailed to the Shareholders after the closing of the hooks.

By order of the Board,
CHARLES DRINKWATER, Secretary.
Montreal, October 10th, 1904.

zephyr tulles are selling fairly well. Special qualities of plain nets are selling for embroidery. On the whole, speculative buyers find the market favorable. Unfortunately for Nottingham employers and workpeople, a large proportion of these goods are produced elsewhere. Business in caps, aprons, pinafores, and shirts is rather slack at present. There is, however, a good demand for blouses, collars, and other fancy articles, and doubtless the lull in the enquiry for other goods is but temporary. Plain and spotted veilings continue in about average demand. The cotton embroidery trimming branches are depressed, and the volume of business has been much reduced.

Agencies in all principal Towns and Cities in Canada.

SEVEN TO ONE

That is about the ratio. About seven times as many persons are injured as die from all causes yearly.

Accidents are a more prolific cause of death than any disease except lung diseases.

Twice as many people are accidently killed as die of old age.

Does it not seem reasonable to you as a business man that it would be to your interest to carry an accident policy?

THE METROPOLITAN LIFE INSURANCE CO.

(INCORPORATED BY THE STATE OF NEW YORK.)

The Company OF the People, BY the People, FOR the People.

ASSETS, $105,656,311.60

Proof of Public Confidence

This Company has more premium-paying business in force in the United States than any other Company, and for each of the last 10 Years has had more New Insurance accepted and issued in America than any other Company.

The Number of Policies in force is greater than that of any other Company in America, greater than all the Regular Life Insurance Companies put together (less one) and can only be appreciated by comparison. It is a greater number than the Combined Population of Greater New York, Chicago, Philadelphia, Boston, Toronto and Montreal.

Significant Facts

This Company's Policy-claims paid in 1903 averaged in number one for each minute and a third of each business day of 8 hours each, and, in amount, $89.00 a minute the year through.

THE DAILY AVERAGE OF THE COMPANY'S BUSINESS DURING 1903.

359	per day in number of Claims Paid.
6,297	per day in number of Policies Issued.
$1,303,559.06	per day in New Insurance Written.
$98,582.76	per day in Payments to Policy holders and addition to Reserve.
$53,841.18	per day in Increase of Assets

Full particulars regarding the plans of the Metropolitan may be obtained of any of its Agents in all the principal cities of the United States and Canada, or from the Home Office, 1 Madison Ave. New York City.

Amount of Canadian Securities deposited with the Dominion Government. for the protection of Policy-holders in Canada, $1,800,000.00.

Investigation Endorses

the statement that while 80 per cent. of men aged 45 are fairly prosperous, only 13 per cent. of those who reach 65 are self-supporting. After thinking carefully about this ask for particulars of an endowment policy in

The CANADA LIFE.

30 Days of Grace

for the payment of Renewal Premiums is one of the many privileges the SUN LIFE OF CANADA grants its policy-holders. Should the Assured die at any time within the days of grace the claim would be promptly paid, even though the premium had not been paid.

HARD TIMES NOT YET.

Some persons in our hearing have been so vehement during the past twelve months or so in the expression of the opinion that the United States was on the threshold of a period of depression, or even of panic, that one might almost have been led to the belief that the wish was father to the thought. It is true that past experience has shown that times of great activity are usually followed by the reverse, and it must be admitted that the period of four or five years which ended last year was remarkable for the prosperity enjoyed by most classes of the community, financial, industrial and commercial. It is true also that this time of almost unexampled progress and buoyancy seems to have come to an end. This truth, however, does not necessarily imply that the United States is now suffering, or is about to suffer, a complete stagnation of business. Yet this is what many of our own countrymen with a sense of misguided patriotism, or worse still, for political objects and in the desire to show what a marvellous Government we ourselves have at the helm of state, would have us believe.

We have always considered that a poor policy which, either for any particular object of such nature in view or merely from a human tendency to "croak," is always ready to cry Wolf! wolf! or tell us of the lugubrious times in store for us. And that is what hard times across the border almost surely mean for Canada in the long run, a similar period of depression here, though beginning, it may be, a little later. The man who, amidst an epidemic, cried aloud, "I will not fall sick," had a good deal to recommend his action.

To come more closely to our theme, the panic which was so sure to overtake our American cousins —and long before this, if our direful prophets were to be taken at their word—has not yet materialized. The activity, buoyancy—even call it inflation—of 1901-02 culminated and came to an end. But what has followed? Little more than a calm readjustment to less active conditions. Trade dwindled somewhat; the capitalization of huge corporations fell off to practically nothing; production in certain lines which had been overdoing the normal requirements was curtailed; foolish and dangerous stock speculation subsided. But there was no panic. The inner causes of this happy outcome of what no doubt was a situation of some risk we will not venture to try and lay bare; the safe transformation was certainly largely helped by a disposition to learn from past experience, and the fact that large conservative interests had taken hold and had a tight grip on the situation. Fairly good crops, too, at somewhat more than usually remunerative prices to the producers have vastly helped. Now, trade appears to be reviving, the accursed strikes having been largely relieved, bank clearings show material increases, and the danger, such as it was, seems to have been successfully surmounted. All this was by no means improbable from the very beginning. Why, therefore, bring the danger closer by exaggerating and, it would seem, setting out to welcome hard times with open arms? Even the fact that a presidential year is dawning has not had the deadening effect that was regarded as certain, and the business situation in the United States is distinctly better than it was six months ago. And as to Canada, we can see no immediate cause for a reversal of her prosperity, in spite of the often unreasonable stuff that politicians talk or write on the eve of an election. The Dominion is doing well and likely to do well. Knowing that, according to former experience, more stringent times are to be looked for in the future, the sensible thing for Canadians to do is to have an eye to windward, and to keep the ship and her rigging trimmed for less propitious weather.

⁂

POULTRY AND FRUIT EXPORTS.

It is no new thing for business visitors to the Old Country to return and tell Canadians of the importance of having our exports to that market of honest quality. Honest goods, carefully prepared, carefully packed, and shipped according to the instructions of Old Country buyers or agents are, we have been many times told, essential if we would either make or keep a market for our wares. Readers of the Monetary Times will recall that correspondents of ours in the United Kingdom have time and again dwelt upon the same thing, while a like doctrine has been preached in our Australian letters for years. It is only a few weeks since the editor of this journal was in conversation with an experienced Canadian merchant whose business has nothing to do with foodstuffs, but who keeps his eyes open for matters which affect trade of any kind. This merchant described his having frequently visited Covent Garden market when on trips to England. The admirable uniformity of cleanliness and symmetry that governed the tens of thousands of dozens of poultry to be seen in that great market, the division and subdivision of sizes of fowls to be seen there impressed him. It was no uncommon thing in his observation for a buyer from a large hotel to visit the market, or send word to it, say on a Monday, asking for "ten dozen fowls, same quality and size as last Friday's order." This meant a greatness of variety and yet an evenness of tenor in certain departments of the market which many Canadian exporters do not understand. And, said this gentleman, the Canadian poultry contributions to the poultry markets of London were not such as to reflect credit upon the country. They were not attractively prepared nor yet well packed.

It is very significant to find a bulletin issued during this present month of October emphasizing the very point just mentioned above. The words issued are: "The Canadian poultry trade with Great Britain is in bad repute"; and the bulletin goes on to say that, while Canada has been marking time, other countries have been advancing both in quantity and quality of shipments. The blame is put on the Canadian shippers. "It is said that exporters kill by cutting the head off instead of dislocating the neck and bleeding from the tongue, and that decayed food is often found in crop and stomach of the birds. Warning is given against shipping too freely around Christmas, when the market is often glutted." Such are the words of a Government bulletin.

Another article of export to which Canada may profitably pay increased attention is fruit. Some notice has been taken by Canadian Government agents in the English Provinces of shipments of fruit from Canada. Our Manchester correspondent, writing on September 23rd, points out that the fruit bill of the United Kingdom, paid to colonial or foreign growers, is ten millions sterling, or say fifty millions of dollars per annum. "Jam is no longer a mere luxury in our lives, as may be guessed from the fact that our troops in South Africa consumed 28,000,000 pounds of it during the Boer war. In London alone from 500 to 600 tons of jam are made every week, and in the rest of the Kingdom almost as much more must be turned out. It is true that not all of the jam is pure and unsophisticated. In emergencies our makers can all but dispense with the use of fruit. Years ago there was a trade in cargo lots of hard seeds or pips from Egypt which took the place of genuine raspberry seeds in raspberry jam. The modern jam-mill makes its own pips on the premises, as was evidenced very clearly the other day when an employé lost a finger in the interior of the pip-making machine."

It is to be borne in mind that glucose, quite against the law, enters freely into factory jams in the Old Country, but the great stand-by of the manufacturer is the stock-syrup, which he compounds of rhubarb or whatever fruits are earliest and cheapest in the markets. "This syrup, along with other mysterious substances, forms the basis of most cheap jams, whatever their labelled names. There is trade also in pure and high-class confections, and possibly Canada might secure some of that. The way to capture such trade is to use only the best of material, to conserve as fully as can be the flavor of the fruit, and to keep on doing so season by season. Periodically the housewife wails in the Press—and she unremittingly complains in private—that no shop-jams even remotely resemble the excellence of the article when home-made."

The same authorities answerable for the hints on fruit, says our correspondent in Manchester, renew their caution to Canadians that only solid merit can retain the confidence of the English. Sentiment, it is pointed out, plays a small part after all in business anywhere. It would be strange if these axioms were ever forgotten. Nevertheless, the artful trader prefers to avail himself of any favorable feeling in the air. That is not to say that he will be so foolish as to try to palliate a fault by reminding his customers that it is a Canadian, and so a fraternal fault. Such an excuse could only make an English dealer grin unpleasantly. Canadian origin, other things equal, is to-day an advantage over United States origin. It is a slender, initial advantage that must be backed by value to become a realizable asset. A good article gains in the Old Country market by wearing a Canadian brand, but we are assured that an article which is for some reason unsuited to its purpose gains nothing.

⁂

DRY GOODS.

The greater security now felt in the North-West in the satisfactory outcome of the season's crops has resulted in a better demand being forthcoming from that region for dry goods. With that exception, however, it cannot be said that general trade in this branch has shown any great activity in Ontario of late. No particular complaint is to hand, but a feeling is prevalent of what may almost be called slackness. At the same time there is a good movement in such goods as are required in winter—flannels, blankets, quilts, and so forth. Prices for these are firm, and indeed there is unwillingness in some quarters to repeat orders for them at old figures.

In spite of the rosy expectations on the part of some people a few months ago as to the rapid decline in cotton staple goods, prices of these are now almost as firm as ever; in fact, they are certainly stronger than they were a month ago. It is true the United States Government estimate of the cotton crop, which places it at 11,500,000 bales, is much larger than that of a year ago, when it was only 9,950,000 bales, but there are several factors which enter the field and modify the first conclusions which might be drawn from the increase. For instance, no surplus exists from last year's crop. The soaring prices which prevailed for so long were sufficient to cause purchasing to be of a hand-to-mouth order, but not sufficient, seeing the small yield, to cause any quantity to be held over for another season. Then, it must be remembered that the consumption of cotton, not only in Canada, but in Europe, the United States, and indeed in every civilized country in the world, has been and is rapidly increasing. Besides this, cotton enters largely now-a-days into the composition of several articles which formerly were made almost entirely of wool. Many blankets, for example, are now made, practically in their entirety, of cotton.

Staple woolen goods are, even to a greater extent, firm in price. In Britain and elsewhere in Europe prices have made considerable advances, owing to the high cost of raw material, and the latter is not behind in firmness in this country. In fact, for some time, Canadian wool has been above its fair parity with the world's market, in illustration of which it may be stated that two or three weeks ago importations were made into Toronto of coarser grade wool from Great Britain.

Dress goods are meeting with a fairly ready sale, and a good deal of interest is manifested in some of the novel lines which are being shown this season. Plaids are more generally in request than for some seasons past, especially in simple combinations of green and blue for waists. Surah silks are popular for a variety of uses, and so are many varieties of crepe, a material which is adapted to high-class dress designs. Black is still a favorite color in these goods, either plain or with dots or diamonds.

⁂

HAS CANADA A WINTER?

Here in Canada we do have ice and snow just about every year; and sometimes it is distinctly cold, as, for example, last winter, when the mercury went below the freezing point on several mornings. We merely mention these well-known experiences for the reason that in the excess of zeal possessed by some well-meaning parties in their crusade against the idea of holding another winter carnival and building another ice palace in Montreal, they would almost make it appear that Canada was a land where "it was always afternoon," and where the tropic banana and the luscious orange disputed for the sunshine's fervent glow. Personally, we think that the crisp coldness of Canada's wintry days, the sharp creaking of her snowbound roads, the synchronous existence of deep blue sky and a temperature several degrees below zero should be a drawing card to the hardy Englishman, accustomed to seeing his snow and frost under a different and less alluring aspect. But perhaps there is something in the anti-carnivalists's objection after all. The winter-sport, ice-palace idea was overdone. It is charged that for a generation no Christmas card, no illustrated paper went out of this country that did not represent some scene of double-intense wintriness. The depicted men looked like bears, so wrapt were they in heavy furs; the fair faces of the Canadiennes were but barely visible beneath their huge masses of polar clothing; the country-side was a frozen waste, and the thoroughfares nothing but a tumble of snowdrifts or a vantage-ground for skaters. So all-pervading was this general picture of Arctic cold that John Bull forgot that Canada's peach-trees grow audaciously in the open, while his own have to be pinned to a south wall; that in this delectable Dominion there are solid miles of vineyards—witness the Niagara District—while most of the few grapes he grows himself have to be pampered under glass. He forgot that Ontario and Nova Scotia produce apples, for he must have known of the fact, because he buys these apples; but the good old chap probably does not know about our delicious pears, plums and small fruits.

It is unfortunately too true, however, that John Bull cannot hold more than one idea in his head at one time. If Montreal's climate will admit of the building of an ice-palace and a successful winter carnival with tobogganning, snow-shoeing and the rest, why, it must be too near the North Pole for him to send his sons there unless they are ne'er-do-well ones. Not quite so near as London, perhaps; but then London could not have an ice-palace if it wanted to. And so Canada suffers! Voila!

⁂

THE YORK COUNTY LOAN COMPANY.

A subscriber who signs the significant words "At Sea" asks the Monetary Times what return the York County Loan and Savings Company is getting for the $844,832 it holds in freehold lands and buildings. Turning up the report of the Registrar of Loan Corporations we find in the cash account for the year 1903 that the sum received during those twelve months from real estate owned beneficially by the company was $17,008, consisting of $4,656 from sales of land and $12,352 from rents, or at the rate of slightly over two per cent. per annum on the $844,000 of freehold land the company holds. It is explained, however, that the sales of $4,656 are those "not included in any of the foregoing items" of receipts, such as loans on shares, loans on mortgages, or received on account of stock, either instalment stock or stock fully paid.

"What is the reason," asks our enquirer, "that members of this company cannot get their money out when they want it? Is the company hard up for cash?" By no means hard up for cash, according to their official return, for they show cash in hand $4,144 and cash in bank $222,368. The reason they have declined to pay back money to stockholders who have applied for it is, as we understand it, that they will hold on to share money just as long as their by-laws say they may. If a man or a woman expected his or her money back in less than six or eight or ten years, they should never have put it in.

We are further asked whether Mr. Phillips, the president, is a professional man, seeing that he is so much interested in literature as to publish a magazine, and also distribute pianos. In reply, the artist has many sides. Mr. Phillips, we have heard, was a preacher of the Gospel in the Old Country once: we have not been told of what denomination. This circumstance is not mentioned to his discredit—quite the contrary; but it is manifest that he did not find in the Gospel ministry the sort of field he desired for his talents. Else, having put his hand to the plough in that direction, we should not find him ten years after putting his hand instead to the trowel and the spade, so to speak, in the construction of avenues and houses in the far west of Toronto, close to High Park. He is a lover of beauty—of this we are sure, and has taste in music.

The company has hundreds of thousands of dollars invested in freehold real estate, mainly in the outskirts of Toronto. Its managers have spent money as if they had the revenues of a principality to draw upon; cutting down sandhills and levelling up ravines in making streets and boulevards whereon to erect houses. In the enquiry proceedings before a committee of the Nova Scotia Legislature it came out that the York Loan Company had in 1897 forfeited shares of holders to the extent of $44,440; in 1899, of $34,793; in 1901, of $62,163; and in 1902 of $77,050, making the very considerable total of $218,446. And in 1903 the forfeitures were $87,679. Are these moneys put speculatively into sand and grass, bricks and mortar, drains and culverts? The way in which these forfeitures are managed is, according to the testimony of Mr. Phillips, the president: "When a man cannot keep up his payments, his money [already paid in, and which he cannot get back till the company is ready to pay him] lies with us to his credit till the expiry of the term, when he gets it —with the statutory reduction of 10 per cent."

This confirms what has been learned experimentally by many shareholders in Hamilton and elsewhere, that the managers of this concern hang on like grim death to the money of shareholders, investing it in vacant lots, sometimes in dwellings (here and there vacant, too), pianos, National magazines, insurance policies—for Mr. Phillips has declared that the York County Loan agents canvass for his monthly magazine and his life assurance company. And when the term of the company's shares expires, in an indefinite number of years, their accumulations are docked of 10 per cent., which is termed by Mr. Phillips "a statutory deduction." The word "statutory" has a fine, authoritative sound, but its meaning is that a by-law of the company is invoked to enable the managers to keep one-tenth of shareholders' money, not as plunder, that is too harsh a word, for the president is a modern philanthropist; but as a reserve commission in the interests of experimental enterprise or of financial science of the Phillips order.

COUNTERFEIT LIFE INSURANCE.

A Fourteen Years' Record.

For about twenty years past we have been in the habit of collecting and presenting to our readers some information in tabular form as to the record of the leading fraternal societies in their work of furnishing cheap life insurance on the assessment plan. Herewith we give the figures of thirty-five societies as to the number of their members and the cost of the temporary insurance they have, most of them during fourteen years past, supplied to those members.

In their earlier stages, varying from ten to fifteen years after starting business, all of these societies made a rapid increase in their membership. After fifteen years, in most of them, death calls increased in numbers or in amount, and new members, therefore, came in but slowly. At about twenty years of a society's age the tide usually began to turn, until more members were going out, for one reason or another, than could be induced to come in. Hence, many societies are now on the standstill, or on the downgrade, in the number of their membership.

A mere glance at the figures in the second section of most of the following tables will show the trend of the business since the opening of the new century. Nearly every branch of the Ancient Order United Workmen shows an actual decrease in membership, in the States. In Canada, the past year's growth is the smallest for many years, amounting to only 721 members. And since the 1903 record closed the experience of this body has become alarming. Two extra assessments have been made, and the Order is very much disturbed thereby. The Grand Master says (in a letter submitting to the members the question of a permanent increase in the rates): "These extra assessments have had a disastrous and irritating effect."

To show what the effect has been we may say that, while 1903 closed with 46,125 members on the roll (see No. 8 below), the number of paying members at the end of March had fallen to 43,305, at the end of April to 42,910, at the end of June to 42,430, and at the end of July to 41,121. This means a drop of over 5,000 in about six months in spite of all the new members that could be persuaded to come in. The death claims paid in July, a year ago, were 24 for $45,685, and this year were 34 for $59,500 upon a much smaller number of contributors. A special meeting of the Advisory Board is to consider what to do, so soon as the membership has been heard from. No doubt the rates will be increased, causing another loss of perhaps 5,000 more of the most desirable and healthiest members.

But the same thing is going on in the American jurisdiction of the A.O.U.W. The increase of rates called for by the Supreme Lodge at Meadville, Penn., a year ago, has resulted in the dropping out of nearly 100,000 members. There were 450,865 in December, 1892, and one year later they numbered only 423,015, notwithstanding the 64,805 new recruits. And the disintegrating process will continue with accelerating speed as the death losses grow in volume, and as the needful assessments multiply. A remnant may be saved, but how much better to have started on a correct basis.

In reading the following tables, it is to be taken into account that $4 is added to the net "cost per $1,000" of each society, to represent the average expenses. Some spend more and some less, but by using this fixed figure for the expenses in all the years, the increase in the mortality rate is indicated by the difference between the former year's figures and those of 1903:

Name and date of Origin.	Year of Record.	No. of Members.	Cost per $1,000.	Year of Record.	No. of Members.	Cost per $1,000.
(1) A.O.U.W., Grand Lodge, San Francisco, California, 1877.	1890	17,544	$16 34	1897	20,141	$21 97

THE MOLSONS BANK.

The record of a prosperous year was placed before the shareholders of the Molsons Bank on the 17th instant, on the occasion of the annual meeting. It was shown that the net profits, which were greater than last year, amounted to about 15¼ per cent. on the capital, which result enabled the payment of nine per cent. dividend, the contribution of $10,000 to Officers' Pension Fund, and the addition of $150,000 to Reserve, after which there remained $37,077 to the credit of Profit and Loss. The reserve fund now equals the capital, $3,000,000 being the amount of each, and it is the opinion of some shareholders, and seems to be admitted by the president himself, that the time has arrived—the bank being within a year of half a century in age—when ten per cent. dividend may be looked forward to as a regular thing. "We have never passed a dividend," said the vice-president, "but have given a large return to shareholders ever since 1855."

In the address of Mr. Macpherson, the president, the general growth of the country and the prospect of a good market for Canada's enlarged and enlarging cereal product was remarked upon. And a continued demand for further banking facilities was to be expected. Still it was to be borne in mind that lean years must follow the years of great prosperity. Several speakers, in moving or seconding resolutions and expressing satisfaction with the statement, referred to the claims of the bank staff, which now numbers 293, to liberal remuneration. And in responding to a vote of thanks, the general manager said the staff had been well treated. He approved the Guarantee Fund and praised the Pension Fund of the bank. Reference is made in the report to the purchase of a site on Bay street, on which to erect better quarters for the Toronto branch, when building conditions are favorable.

THE BRITISH MARKET FOR WOOD.

Farnworth & Jardine, of Liverpool, in their monthly circular upon lumber conditions in the United Kingdom said, under date of 1st October:

The arrivals from British North America during the past month have been 29,342 tons register, against 41,265 tons during the corresponding month last year, and the aggregate tonnage to this date from all places during the years 1902, 1903, and 1904 has been 381,441, 388,701, and 381,577 tons respectively. There is little improvement to report in this business during the past month. The arrivals generally although fairly moderate, have been more than sufficient for present quiet trade, and stocks of all the leading articles are ample. There is little change in values to report.

Waney pine arrivals from Canada have been on a larger scale, but the demand continues very quiet and the deliveries small; stocks are ample, but values are fairly steady. Of square pine, there has been a moderate import, but the demand continues slow, and stocks are sufficient; there is little change in value to report. The import of red pine consists of about 2,500 feet; the demand is limited, and stocks, though not heavy, are sufficient; prices are firm. Oak logs have not been imported; there have been a few enquiries in the market, but the deliveries have been small and stocks are adequate; values are unchanged. Elm has arrived more freely, and entirely on contract. First-class rock continues in request, and stocks are moderate; prices are firm. There is very little enquiry for ash. Pine Deals.—The arrivals have again been large, and slightly exceed the corresponding month last year; the deliveries have not been satisfactory, and stocks are heavy; values are with difficulty maintained. There is little change to report for red pine deals, and stocks are adequate. New Brunswick and Nova Scotia spruce and pine deals:—The arrivals during the past month show a further falling off, and a marked reduction as compared with corresponding month last year, viz.:—10,610 stds., against 16,700 stds. in 1903; the deliveries have been fairly satisfactory, and values have slightly improved, but stocks are much too heavy, and moderation in consigning is essential, For pine deals. there is no improvement in the demand to report; stocks are large. Of birch logs there has been a moderate import, chiefly from Quebec, which goes largely direct into consumption; stocks are not too large, and values are fairly steady. Planks:—The arrivals have been on a moderate scale, and the deliveries have fairly kept pace; there is more enquiry, stocks are light, and values are firmer. There has been no importation of British Columbia pine; the deliveries show improvement, but stocks are heavy; values are steady.

THE FIRE INSURANCE SITUATION.

We are pleased to be able to reproduce below the address of Mr. T. L. Morrisey, of Montreal, manager for Canada of the Union Assurance Society, at the Insurance Institute of Toronto dinner last week. Responding to the toast of "The Institute and Sister Institutes," Mr. Morrisey chose to confine his remarks to a discussion of the fire insurance situation in Canada. That he discussed it to the entertainment of his audience will appear:—

Our business it seems to me is in a state of evolution. It used to be said that when a man failed in any other business, or when he found he was no good for anything else, he went into insurance. If that were true, or partially true, in the past, I feel sure it will not be in the future. The insurance man of the future will have to be well equipped, or he will fall behind in the race.

Now of what does the education of a fire insurance man consist? Rather say of what does it not consist? He must know practically something about everything. There is no business or calling or profession where a general education in its broadest sense is so essential.

It goes without saying that he must have a knowledge of figures and accounts. Even the old-fashioned insurance man was supposed to have that. But the coming insurance man will have to be a regular glutton for statistics. Experience must be his great guide, for he can only rely upon the story of the past to unfold the future. It will therefore be of the utmost importance to him to see that that story is truthfully told, and that can only be assured by the careful and intelligent study of statistics.

He must understand the nature of things even to their chemical analysis, to know where lurks the danger he is looking for.

He must understand the different processes of manufacture, so as to know where to look for that same danger and to provide a safeguard.

He must be a bit of an architect, not necessarily to distinguish between the Greek and Byzantine, but to be able to tell how a building should be built to be fire-resisting.

He must have a knowledge of hydraulics, for after the fire hazard has been brought to the irreducible minimum there is still left the chance for a fire breaking out, and there the fire insurance man must come in with his expert knowledge, and be able to tell how to provide against that contingency, and to extinguish the fire with least possible damage.

He must know something of the law—but not too much—just enough to tell him when to consult his solicitor.

I dislike leaving the doctors out, but I really cannot trace any affinity between fire insurance and medicine, unless it be that he must learn to take his medicine like a man, for he sometimes gets it in large doses.

He must not entirely overlook the other learned profession—the Church, lest his too great familiarity with fire in this world may breed a disregard for it in the next. But as the great need of the insurance men of the future will be education, it will be that he in turn may educate. There lies the great field for his work. From the highest to the lowest; in business life; in civic life, yea, even unto the halls of legislation may the good work be carried on.

Let us begin with the public. The popular prejudice against insurance is well known. It is reflected by the press, not only in letters from long suffering individuals who claim to have been crushed under the iron heel of the tyrant, but frequently even editorially. How often have we observed when rates in a town have been raised, the local newspaper working itself up into a fine frenzy over the iniquities of what they are pleased to call the insurance combine. The underwriters are branded as extortionists, and the people are urged to form a local company to write all the risks. How much better these editors would serve a useful purpose if they would calmly investigate the reason for the increase of rates, and agitate for a betterment of conditions, which after all is the only rational way of bringing about reductions in rate. Such editors stand in need of education.

The popular prejudice against insurance companies is shown also in the difficulty, no matter how strong its case, a company has in getting a verdict before twelve good men and true; it is shown by the moral support given to those inclined to make extravagant claims against insurance companies. So pronounced is this that the companies frequently find themselves forced to take over stocks or resort to other expedients rather than risk an adverse decision by arbitration. The public seem to be oblivious of the fact that all these increased burdens laid upon the companies react on themselves; and when the law of compensation commences to operate in the shape of increased rates, they cry out. A little missionary work among the public along these lines would do good.

Then take our friends the manufacturers. If the vice-president of the Association in Montreal voices their sentiments they stand sadly in need of education. This gifted gentleman amongst other things says that the fire insurance business in Canada is in a bad way—some of the leading lights in the business told him so. He proceeds to tell us how we should conduct our business. As a preliminary he suggests reductions in rates. And why? Because some American companies following modern and up-to-date methods come over into Canada and write business at one-fifth or one-sixth our rates, and do it at a profit. This would be a serious arraignment if true, but it is not true. There are only two kinds of American companies that come into Canada by the underground route—the wild cats and the factory mutuals. The wild cats certainly do business at a profit for their business only amounts to collecting premiums; as they don't pretend to pay losses, their business must of necessity be all profit.

Then as to the factory mutuals, they don't do business at a profit because they are mutuals. When a concern goes into the list of the mutuals they at once assume the position of insurer as well as assured, and they can't tell what it is going to cost. It may be, as it should be, that the rate charged by the stock companies is more than the cost for any given time in the mutuals, but it is so because the price is fixed, and no matter what the experience may be we cannot get any more.

But I do not think the vice-president in Montreal did voice the sentiments of the Manufacturers' Association. I see that the body have worked out a scheme of insurance of their own, and they have wisely determined to write small lines and to charge the same rates as the line companies. On the whole, I think the manufacturers may be left to themselves. If they go on with that insurance scheme they will get their education at first hand.

We next come to the civic authorities. There is virgin soil to work upon if you will. The average city father looks upon the underwriters as his hereditary foe. In Montreal the genus is developed to perfection. In that city at the last civic election the insurance question was to the fore. I can't say that it was an issue because the defeated as well as the elected came out just as strongly. It was a plank in the Mayor's platform, as well as in those of most of the aldermen, that if elected he would work with unremitting energy, and never let up until he has accomplished his purpose. What purpose, do you suppose? Why a reduction of insurance rates! Never a word about affording the citizens better protection for their property against fire! What care he though wild alarms break upon the midnight air, and the sky become lurid with the glow of burning property; the rates must come down! What though the insurance companies be losing money hand over fist; the rates must come down!

Now the aldermen are not bad fellows when you know them, and they display fair average intelligence when you get them on any subject other than insurance. Would it not be possible to teach them something about insurance? Is the case hopeless? I think not. I think the day will come when city councils will consider this question, not from the standpoint of what it is going to cost, but how perfect can the protection be made, and popular opinion will not allow them to view it in any other way. The same principle that prompts a man to spend ten to fifteen thousand dollars in protecting a couple of hundred thousand dollars in value in his store or factory, will prompt the community to spend money with an equally lavish hand to prevent and save loss from fire. When that day comes, aldermen need not sit up nights thinking about insurance rates—they will come down.

But we must carry this education propaganda a little further, namely, to the Provincial Legislatures. They don't bother us much, except to tax us. We don't object. We are prepared to pay our fair share, but why don't they go a step further and tax those modern and up-to-date concerns that come in and do business without contributing anything to the public treasury. One province, Manitoba, has already anticipated our wishes in this respect, so perhaps it might not be a difficult matter to educate the other Provincial Legislatures up to the beauties of augmenting their revenues in like manner.

And lastly, Ottawa. Up there they undertake to regulate the insurance business of Canada. They insist upon our putting up a deposit and keeping up our reserves. They supervise our methods, and make us toe the mark generally. Now why do they do all this? Certainly not at our request. We don't consider it necessary to our welfare, or that it benefits us in any way. They do it for the protection of the public. And yet we are told on the authority of the vice-president of the Manufacturers' Association in Montreal, that the cream of the manufactural risks in Canada are being written in these modern and up-to-date concerns that come into Canada without let or hindrance, and openly violate the law.

If we mention this at Ottawa we are told the law is there, lay the information. But if the reason for the law is sound why should it devolve upon us to lay the information? We haven't asked for the law, we feel that we don't need it. We believe it is in the public interest, but in a narrow sense that is no concern of ours. But if it be admitted to be in the public interest why does not the law go further and protect the public? A few seeds scattered at Ottawa might bear fruit.

So you see, gentlemen, the members of the Insurance Institute have quite a programme cut out for them, and they can accomplish much if they but qualify.

* * *

FIRE INSURANCE MATTERS.

Recently the German Minister of Public Works was petitioned to allow of the construction of "sky-scrapers" in Berlin and other cities. It was pointed out that the present limitation of the height of buildings, namely, to seventy-four feet, was uncalled for in view of modern methods of steel construction. This called forth the rejoinder from the Government that the danger from fire had by no means been eliminated by steel framing, and instances were cited from this side of the Atlantic in which people situate in the higher stories could not be rescued when fire had broken out in the lower part of the buildings, and where it had proved impossible to get water high enough to extinguish the flames. Another objection to the removal of the present restrictions was that such removal would doubtless lead to an era of wild real estate speculation.

That organized labor by its high-handed methods and continued demands for increased wages may kill the goose that laid the golden eggs—not only in the narrower sense of loss of employment, but in permanent injury to certain industries—is indicated by the substitution of concrete for brick and stone. This tendency has received a great impetus from the mode of construction adopted by the contractors for the New York subway, which is of concrete, reinforced by steel. Not only has the use of concrete reduced the cost of the work by permitting the employment of unskilled labor, thus rendering the contractors largely independent of bricklayers and masons; it has prevented strikes and the delays incident thereto.—N.Y. Economist.

LIFE AND ACCIDENT INSURANCE.

Word comes from Winnipeg that Mr. Walter B. Lydiatt, of Winnipeg, while hunting several miles southwest of Saskatoon, N.W.T., lost his life, having been shot by a companion. Mr. Lydiatt was provincial manager of the Dominion of Canada Guarantee and Accident Company, and removed to Winnipeg three years ago from Toronto.

A visit to Canada is being paid by Mr. S. Stanley Brown, of London, England, general manager of the Employers' Liability Assurance Corporation, Limited, a prominent and strong English company, founded in the year 1880. Mr. Brown has expressed pleasure with the progress made by his company in this country, as it now stands at the head of the list in the matter of premium income. The Employers' Liability Assurance Corporation is the original liability company of Great Britain.

The executive committee of the International Association of Accident Insurance Underwriters have selected Muskoka as their next annual meeting place. The convention will be held from July 18th to 21st. It was voted to recommend the limitation of weekly indemnity payments under health policies to twenty-six weeks. Plans were also formulated whereby each company belonging to the association will report its health insurance statistics so that in future it will be possible to know the premium rate that should be charged for that class of risk. Statistics show that for the ten years ending December 31st last, there had been an underwriting loss of three and a half per cent. in all accident business written in the United States.

The building of the Trust and Loan Company of Canada, on the south east corner of Toronto and Adelaide streets, Toronto, has been purchased by the National Life Assurance Company of Canada. It is intended to have the interior of the building remodelled to the most modern design and the offices are to be ready for occupation early in May next. The present handsome grey stone structure was erected by the Trust & Loan Company at a cost of some $65,000, in 1872, and has been considered one of the best office buildings in the country. The vaults are strong and commodious, and the whole building is substantial. The National Life may be congratulated on having secured a very desirable situation for its offices.

* * *

FOR GROCERS AND PROVISION DEALERS.

Steps have now been taken by the Department of Trade and Commerce for fixing the grain standard for oats, while those for other grains will be fixed within a few days. This is being done later than usual this year, and the delay has caused a good deal of inconvenience and some loss both to farmers and dealers.

The final report on the crops of Great Britain, according to the London Statist, is very discouraging, particularly in regard to wheat, oats and barley. On the other hand, the potato crop is decidedly good, and so are roots and grass. Taking 100 to represent perfect healthfulness of crop, we find wheat stood at only 80, a decrease of over 12 per cent. on the average of the past ten years at the same date. Barley stood at 88, a decrease of 0.9 per cent. Oats stood at 88, a decrease of 1.3 per cent. Beans stood at 74, a decrease of 11.7 per cent. Peas stood at 83, a decrease of 1.9 per cent., and hops at 49, a decrease of 33 per cent., all on the average of the past ten years at the same date. On the other hand, potatoes stood at 90, an increase of 2.8 per cent.; roots at 90, an increase of 3.8 per cent., and grass at 92, an increase of 1.8 per cent.

Last week's Cincinnati Price-Current says there is a more liberal movement of hogs into market channels, and the number for the week make a total greater than previously for three months, and decidedly in excess of corresponding time last year, carrying the total for the season above that of a year ago, and overcoming the deficiency heretofore shown. With the enlarged marketings prices of hogs have naturally receded rather sharply from the seemingly high position previously prevailing, under the influence of moderate offerings and the position of the Corn Market. Total Western packing, 385,000 hogs, compared with 330,000 the preceding week, and 300,000 two weeks ago. For corresponding time last year the number was 280,000, and two years ago 310,000. From March 1st the total is 12,065,000, against 12,015,000 a year ago, an increase of 50,000. The offerings include a good proportion of satisfactory quality, and more or less of undesirable quality. Prices are decidedly lower, showing an average for prominent markets of about $5.50 per 100 lbs., compared with $5.90 a week ago, $5.95 two weeks ago, $5.60 a year ago, $6.95 two years ago, and $6.15 three years ago.

—Mr. A. D. Griffin, who has just returned from a surveying trip in McCaul and Dundonald Townships, west of Lake Abittibi, in Northern Ontario, reports that that region is mostly good clay land adapted to agriculture. Spruce and poplar are the trees which predominate. There is considerable red pine and a small quantity of magnificent white pine. Indications were discovered of an extensive iron deposit.

* * *

—Our readers will remember the case of Philip Weinseimer, former president of the Building Trades Alliance, of New York, who has been for a week on trial for extortion. The jury returned a verdict of guilty shortly before midnight, on Monday last. He was at once remanded to the Tombs until October 28th, when sentence will be pronounced. The charge against Weinseimer was made by George J. Essig, a master plumber, of extorting $2,700 from him under a threat not to permit work to continue on the Chatsworth apartment house there unless the money was paid. His counsel said he would appeal the case, on the ground that the verdict was contrary to the evidence, but most people who have followed the case must have a very definite opinion as to the man's guilt.

GROWTH IN THE FAR WEST.

My last letter, posted at Carberry, Manitoba, told of the growth manifest on the Prince Albert branch railway. Craik is, after Lumsden, the next stopping-place upon it of any account. Up to quite recently the station-house was all that graced the name of railway station at this place, there being not a building of any kind to be seen over the wide and lonely plain. Only twice a week trains toddled leisurely in and out, and this was Craik's communication with the outside world. In those days the section foreman made his home here, and with his wife purveyed for the bodily wants of railway passengers across the arable desert. A very creditable meal they served—one, indeed, which put Regina service to the blush. I may remark that a first-class hostelry, well kept, is still a crying need in the Territorial Capital. To-day, Craik has stores and a hotel, and all that a village of its youth could be expected to have, and it is still growing. A very large turnip is displayed at the station, attesting to the suitability of this district for the growing of roots. Parties have been sampling this magnificent specimen; this is clear, for its features have been badly scarred by the jack-knives of investigators. The train is now on the way to Davidson, another station, and we pass through smiling fields of grain. A gentleman is on the train who is the proud possessor of these very numerous stooks we see, whose weight and frequence would indicate a yield of 25 to 30 bushels per acre. He says that the sample of wheat is good. He came from "the other side," i.e., the United States, two years ago, and already this year's crop has put him on his feet. Now, remember, this is land that all and sundry were in the habit of regarding as waste, and the people who came in from the States to take it up and farm on it were regarded as dupes. A very limited time was given by the prophets of evil until all of these new-comers should be picking up stakes and "getting" to some productive region, where they could grow things. I have myself heard wise ones say: "Why, just look how poor the grass is; if the land cannot grow grass richly, it cannot grow beans." This very land to-day that is occupied and farmed largely by our American cousins is an object lesson to the critics. They would do well to give heed, and speak after they know. Davidson, Handley, and Dundurn, on this branch railway, are all bright and thriving villages, whose existence would have been hard to discover three years ago. Dundurn is about half-way to Prince Albert. What a change has been brought about in such a short time! Here I find a traveller whose trips up the branch are this year made regularly once a month. He is in the provision and cold storage business, and is adding up now what orders he has taken in car lots. Formerly this trip was made only annually. This firm, it is safe to say, is doing twelve times the business it was doing three or four years ago. Is not this something?

Saskatoon is just across the South Saskatchewan river—a noble-looking stream. Here is being built up as progressive and enterprising a community as one could wish to see; already the place has a population of about 2,000. The district tributary to it has had a very good season. The wheat harvest has been most satisfactory; no damage reported from either rust or frost, and the grain sampling for the most part No. 1 hard and No. 1 northern, with an average of 25 bushels to the acre; price quoted just now around 90c. per bushel. Saskatoon's banking interests are looked after by the Union Bank and Bank of Hamilton, both of which have had to move into more commodious quarters since they first opened.

Saskatoon came into prominence as the point of debarkation of the Barr colonists. Sock-it-to-him was the cant name adopted for the place because of the alleged fleecing of green Englishmen, whose greenness was the outstanding feature of these pilgrims. These "chappies" were a shining mark for all who cared to "do them up," as the slang goes. One bright specimen was in quest of seed bran to grow breakfast food. This, I am told, is a fact. Another, whose acquaintance with mules was altogether recent, was, after having his team taken out of a hopeless tangle by a sympathetic bystander, demanding of them to "Advance! Advance! you beggars," to the great amusement of the onlookers. And the story is told of one who engaged with a nearby farmer. He was asked by his employer to go and bring in the lambs that were out in the pasture. He left on his mission a little before breakfast, and did not put in an appearance until late in the evening. The farmer was puzzled as to the whereabouts meanwhile of the new hired man, and upon questioning him at his home-coming learned with dismay that he had been in full chase after Jack rabbits. These nimble creatures had kept him going in wild pursuit all day. This young man now knows that there is a difference betwen a lamb and a Jack rabbit.

The Barr colony, after deposing the Rev. Mr. Barr as its guide, philosopher, and friend, at this point, trekked west to Lloydminster, where they are, reports say, doing fairly well.

RAMBLER.

Winnipeg, 11th October, 1904.

⁂

ANSWERS TO ENQUIRERS.

Reader, Guelph.—It is true that the clearings of Canadian banks have been very large during the first two weeks of October, but they are not quite unprecedented, though exceeding $60,000,000 per week. In the week ended 22nd October last year, for example, the totals of Canadian clearing houses amounted to $62,247,000; while in June and in October, 1902, they exceeded $62,000,000; of that year they were $62,063,000, $65,000,000, and $64,904,000 in three successive weeks, where in the same month of the present year they were only $58,518,000 and $50,951,000 per week. Before 1902, however, we can find no figures of this magnitude. It is to be remembered that in most of 1901 there were only nine clearing cities in Canada; during part of that year only eight, while since May, 1902, there have been eleven.

Correspondent, St. John, N.B.—You had better write to the Department at Ottawa: we are too far inland to judge of such matters without more particulars. It is probably a trade custom, and, if so, there must be reasons for it. Some one who writes to the National Association of Credit Men of the United States under date 1st October, and signs "Anglo American," notes that United States foreign trade languishes, and gives some reasons why. He says: "I know of instances where three or even four commissions are paid in New York before goods leave this port, these being borne either directly or indirectly by the manufacturer. One commission would be legitimate, while the others render it all the more difficult for the American manufacturer to make headway abroad. The commissions I allude to are paid to: (1) The selling agent; (2) The New York house which guarantees accounts; (3) The export broker; (4) The export commission merchant. The last-named charge increases the cost to buyer at his own door and affects the price he could otherwise afford to pay for the goods. Taking these in the aggregate they must sometimes amount to as much as 10 per cent., a serious handicap for the American manufacturer in competing with English and German rivals."

C. C., Montreal.—Yes, we had heard of the proposal; mention was made of it on page 468 of last issue. It is not always possible for us to get all the items respecting insurance under one heading.

⁂

THE CARD SYSTEM IN LIFE ASSURANCE OFFICES.

SECOND ARTICLE.

In a previous article, we stated that the system of keeping newspaper subscribers' names and accounts on cards, of keeping small or transient store accounts on cards, instead of in elaborate books of account, has a number of points to commend it. Also that the growing use of the card method is especially noticeable amongst the large life assurance companies, in one of which there are over a dozen different sets of cards in daily use, cards of different colors and sizes, and with different spaces for different kinds of data. We now proceed to describe, after having stated how cards are used in the other departments of the Canada Life Company's business, what use is made of them by the Medical Department of that company.

The card systems in use by the Medical Department are of three varieties, those purely medical and confidential, those which are statistical, and those on which a record is preserved of all medical examiners acting, or who have acted, as servants of the company in the United States, Canada or Newfoundland. The medical and confidential cards are purchased in a printed state ready for filing; they are arranged alphabetically and constitute the most important item in the department in point of numbers and cost of maintenance. Their value cannot be estimated.

The statistical cards contain information regarding the causes of death of policyholders, as well as other important office particulars, and are, in the case of the Canada Life, printed in two colors, one for Canadian and the other for American policyholders. The mortuary cards are divided into age groups, i.e., for those who die under age 25, between ages 25 to 34, 35 to 44, and so on. At the end of the year the cards representing the total deaths occurring during the year are collectively tabulated, forming very interesting and useful material.

Cards containing records of the company's medical examiners are of small size, alphabetically arranged, and on them is entered the examiner's qualifications, date of his appointment, etc. In connection with these a system of exchange of information with other companies is established by which we are enabled to judge pretty accurately of the desirability of appointing any particular examiner, as well as a card record of examiners who have been found unsatisfactory by other companies.

The card system has been found, in this direction as in others, very convenient and of great use. The chief points in its favor are these:

(1) It allows one to discard, or file in a different place, anything which is not required, and so does away with the keeping of a lot of what is called "dead wood."

(2) One does not need to keep nearly as large a pile of cumbersome books as if every detail were put into a book.

(3) It lends itself very readily to the changes from one grouping to another.

Nos. 1 and 2 speak for themselves. In regard to No. 3, attention might be called to the fact that there are many different ways in which a company manager may want to group policies. At one time he may wish those of the same plan and age at entry together; at another he may desire those having the same attained age; at still another, those that have been cancelled in the same manner. In using books to accomplish this, a company would have to list again on paper and this takes time. By the new method one just shuffles the cards! Then an "adding machine" may come in handy for what is wanted afterward. "This great benefit," says our correspondent, "derived from the fact that we can so easily change the grouping of the cards, is felt in all the departments of the office." Taking everything into account, one who has used the system must wonder how he ever got along under the old way of

NEWELL & HIGEL CO.

working. The simplicity and yet perfect orderliness attainable under it are, we are assured, extreme. When a policy lapses, or expires, for example, its card can be destroyed and thereafter takes up no more room, as it would do if it were in a book. There may thus be an immense saving in weight of books alone, over a length of years. In fire insurance circles, too, the card system is found of great convenience. The Western Assurance Company, for instance, uses it and speaks well of it.

* * *

GALT BOARD OF TRADE.

On Thursday evening of last week, the annual meeting of the Galt Board of Trade was held. Its report showed that this prominent industrial town had had a busy year. A review of the twelve months was given by R. O. McCulloch, the retiring president, who in recalling the labors of the Board, cited the location in the town of six new manufacturing industries during the year, as well as large additions to four of Galt's foundries. He referred to Galt's great lack of dwelling houses, which has grown to be one of the most urgent needs of the town. A long discussion on the deadlock in the council on the appointment of a parks committee resulted in the passing of a resolution offering a Board of Trade committee to arbitrate. It is intended to hold the annual banquet of the Board before the close of the year. The officers elected for the ensuing year were: President, Joseph Stauffer; vice-president, J. H. Fryer; secretary, A. G. Donaldson; treasurer, James E. Warnock.

* * *

LIFE ASSURANCE MEMORANDA.

Vice-President Buckner, of the New York Life, tells the Chronicle of a case secured by an agent of the company after eight years of patient effort. When first approached the assured refused to consider the agent's proposition; the latter, nothing daunted, declared that some day he would sell his client a policy, and he did, although nearly eight years past before the transaction took place. Persistency is truly "one of the greatest assets an insurance man can have."

Fourteen years ago an industrial agent described a negro applicant for insurance as a white man. The company did not discover the misstatement till the man's death, when the beneficiary insisted on being paid the face value of the policy and not the proportionately smaller amount paid on negro claims on account of the higher mortality among negroes. A Kansas City judge rules that as the man had been presumed to be white for fourteen years, he must be treated as a white man after death.—Investigator.

Richard Teece, F.I.A., F.F.A., general manager and actuary of the Australian Mutual Provident Society, at Sydney, New South Wales, who, as we have noted, was entertained while in Toronto, was accompanied by his wife and daughter, also by Mr. Apperly, one of the secretaries of the Australian Mutual Provident, and has been visiting Great Britain and the United States. The special object of his trip was to investigate the workings of Industrial Life Insurance, as operated by the large British and United States companies making a specialty of this form of insurance. The Australian Mutual Provident Society proposes to commence Industrial Life Insurance on the 1st of Jan., 1905. Mr. Teece is one of the most distinguished figures in life insurance. His management of his company is well known to life insurance men, and to a very great measure the splendid profits which his company has paid to policyholders, the low expense rate under which it has been operating, and the favorable mortality rate experienced, are mainly due to Mr. Teece's administrative abilities.

* * *

—Broadly speaking, express rates are based upon ordinary freight rates, and are subject to practically the same conditions. In view of this, the Toronto branch of the Canadian Manufacturers' Association are urging the Dominion Government to so amend the railway act as to place the express companies under the jurisdiction of the Commission, just as though they were railways.

—It now appears that the report which announced the placing of an order by the Canadian Pacific Railway with the Consolidated Lake Superior Company for 40,000 tons of steel rails, was, to say the least, premature, satisfactory assurances as to grade not having been forthcoming from the Soo Company.

* * *

—Ottawa has gained in population during the last twelve months at the rate of 136 residents per month. At this time last year, the city had 61,597 people, and now, according to the assessors' census, it has 63,234. An increase in the assessed value of property is also shown by Ottawa from $32,321,925 last year, to $33,018,740 this year.

* * *

—The circumstances under which the directors of the Richelieu and Ontario Navigation Company have decided to pass the half-yearly dividend of 3 per cent., due on 1st November, are thus set forth in a circular, signed by R. Forget, the president: "Owing to the unfortunate accidents which the company has suffered, the decrease in tourist travel, due to the St. Louis Exposition, and unfavorable weather during the past season, your directors have deemed it in your interests to pass the interim dividend payable November 1st. They are pleased to state, however, that the company's financial position as well as its earning power, has not been impaired, and that it has no floating debt. With the St. Louis Exposition and the Presidential election over and with the new steamer "Montreal" in commission, a favorable season for 1905 is anticipated."

* * *

—Almost a million dollars a day, indeed more than a million dollars each working day, are the gross earnings of the Western Union Telegraph Company of the United States. Here is a summary of their report for a series of years ended with 30th June:

	1904.	1903.	1902.
Gross revenue..........	$29,249,390	$29,167,687	$28,073,095
Operating expenses	21,361,915	20,953,215	20,780,766
Net revenue	$7,887,475	$8,214,472	$7,292,329
Interest on bonds	1,157,700	1.077.700	992.580
Net profits	$6,729,775	$7.136.772	$6.299.749
Dividends	4,868,071	4,868,050	4.868.031
Surplus	$1,861,704	$2,268,722	$1,431,718
Previous surplus	13,019,725	10,751,003	9.319.285
Total surplus	$14,881,428	$13.019.725	$10.751,003

The surplus, after operating expenses and bond interest, amounted to $6,729,775, and is equal to 6.91 per cent. earned on the $97,370,000 capital stock.

* * *

—One would imagine that any system which encourages men to work to their fullest capacity would be good for both employer and employee, as well as for the material industry as a whole. The Engineering and Shipbuilding Trades Federation of Great Britain think otherwise. They have just reported in the most adverse terms upon the bonus system recently introduced into Great Britain, under which the worker who succeeds in producing something beyond the average day's work receives a bonus or premium thereupon. The report of the Trades Federation Committee condemned it as an adoption of a most pernicious and degrading condition of employment—the task work system. It declares the system to have absolutely nothing to recommend it. It is said to create jealousy and ill-feeling in the workshop, and causes endless bickering and misunderstanding. It has been, they allege, the cause of more men being discharged than any strike that has ever occurred in the history of the engineering and shipbuilding trades. The committee furthermore unanimously condemns any system of wage-paying except by the hour, or, when mutually arranged between workers and employers, by piecework. Thus is struck another blow at British industry; thus forged another link in the chain which prevents the able man from rising above his inapt and lazy fellows.

Mercantile Summary.

The Barclay-Hodgkins Lumber Co., Limited, of Toronto, is a company just organized, which will buy, sell, and deal in lumber, and deal in timber limits; capital, $50,000. Charles Albert Barclay, of Pickering Township, Ont., is the chief mover in the scheme.

The Anyun Fase and Electrical Company, Limited, Hamilton, has been incorporated with a share capital of $40,000. It will manufacture electrical and mechanical apparatus and supplies. Among those interested are D. M. Cameron and G. B. Baby, of Hamilton.

The Senator Mill Manufacturing Company, Limited, Toronto, has an Ontario charter to manufacture and deal in machinery for reducing rock, quartz, cement, and similar materials. John Percy Jones, of New York City, and J. K. Griffin, of Galt, Ont., are interested.

An Ontario charter has been granted to the Distributors' Company, Limited, headquarters, Toronto; capital stock, $1,000,000. Among those interested are: T. Oliphant, a fruit-grower of Clarkson, Ont., and H. McC. Mulholland, merchant, of Toronto.

The Brockville Lumber Company, Limited, capital, $75,000, has been incorporated under Ontario laws. It proposes to manufacture and deal in lumber, hardware, cement and builders' supplies, and also to take over the sawmill and lumber business in Brockville, owned at present by Mr. Van R. Marshall.

A company has been incorporated, under Ontario laws, and under the name of the Canada Process Co., Limited, Toronto, to carry on the business of producing all kinds of minerals and compositions of the same, with subsidiary powers. Capital, $50,000. G. H. Campbell and J. McNeill, of Toronto, are provisional directors.

Under Ontario laws a company, with headquarters at Windsor, has been organized under the title of the New York-Lake Erie Oil and Gas Company, with a capital stock of $1,000,000, to explore for and operate wells of petroleum, natural gas, salt, etc. A. W. MacGregor, of Windsor, Ont., is a leading member.

A fine new locomotive has just been turned out at the Canada Foundry Works for the Canadian Pacific Railway, and there is additional interest in the fact because it is the first engine of its kind which has been built in Toronto for a great number of years. We understand that the company has a contract for a number of similar locomotives.

Work is progressing on the new power-house, at Lac du Bonnet. As a result of the division of the Winnipeg river at that lake, an island is formed on which the new building is being erected. In the island is a valley, through which a race is being cut through the solid rock to conduct the water to the wheel. The capacity of the power-house will be 20,000 horsepower, which, when brought to Winnipeg, is expected to greatly reduce the cost of electric power there. The machinery is being made by the Canadian Electric Company, from whom nine generators have been ordered. The building will be of brick and its dimensions are to be 500 feet by 50 feet. Machinery will be installed, it is hoped, by the end of April.

An Ottawa despatch of Monday last has the following: The trial of ex-Mayor Fred. Cook on the charge of perjury, preferred by J. Carling Kelly, arising from the action of the latter against the Ottawa Evening Journal, took place before Magistrate O'Keefe this afternoon, and the ex-Mayor was honorably acquitted. It seems that Mr. Cook, while Mayor, signed a document for Mr. Kelly and put the Mayor's stamp on it. Kelly described this as the corporation seal, and accused Mr. Cook of perjury, when he swore he did not use the seal. Evidently the complainant saw no difference between a seal and a stamp. This is the same Mr. Kelly who brought an action for libel a fortnight ago against the Ottawa Journal, which published an article reflecting on Mr. Kelly's methods of promoting companies. The action was decided in favor of the newspaper. As long ago as the 29th July, our Manchester correspondent referred to this J. Carling Kelly in a not complimentary way. See Monetary Times, 12th August.

As an . . . Investment

We believe our 5% **DEBENTURES** to be one of the safest and surest that you could possibly enter into. It is safer than a Bank, because you have all of our Permanent Capital Stock, and the whole of our Assets, consisting of first mortgages on improved real estate, as a guarantee behind the Debenture. It is the surest, because the half-yearly coupons are attached to the Debenture and can be cashed at any bank in the country. . . . .

Write to-day for our booklet, entitled, "An Investment of Safety and Profit."

An American exchange is authority for the statement that in addition to the "Soo Line" extension from Glenwood up through Thief River Falls to connect with the Canadian Pacific Railway, for a new short line to Winnipeg, there is to be an important east and west line in the Canadian Pacific group in the shape of an extension of the Duluth, South Shore and Atlantic from Duluth to Thief River Falls. In addition to the "Soo Line" northerly from that point a line is now being surveyed almost due west through Grafton and on to connect with the main line, supposedly at Kenmare. This will give northeastern North Dakota and northwestern Minnesota not only a new line to Minneapolis, but a new outlet to Duluth and the lakes.

WINNIPEG

Mercantile Summary

Work is to be started at once, it is understood, on the Nova Scotia Eastern Railway, near Country Harbor.

The whaling business is evidently a popular one in Canada. Since the new Government regulations were published, no fewer than 700 licenses have been applied for.

Brewer & Reynold's steam sawmill at Keswick, N.B., has been destroyed by fire, with all its machinery, and a large quantity of lumber supplies. Loss, $3,000; without insurance.

Hespeler, Ont., ratepayers have voted unanimously in favor of loaning $20,000 to Clark & Demill, of Galt, manufacturers of woodworking machinery, to induce them to move their plant to the former place. Buildings will be put up at once.

The finding of lode tin in South Africa is announced. Tin ore is also found in the form of cassiterite, from which mineral it is an easy matter to separate the pure metal. The discovery may have important results on the development of the new colonies.

The Metallic Bedstead Company has been incorporated under Dominion Government regulations for the purpose of making iron and copper bedsteads, mattresses, and pillows, and to sell metals. W. Mingle and J. P. Montreuil, of Megantic, P.Q., are charter members.

The Dominion Department of Railways and Marine has issued an order, dated 7th inst., ruling that the Canadian Pacific and Grand Trunk Railway Companies shall bear the cost between them of building the Yonge street bridge, Toronto. Work is to be completed by the 15th April next.

The coasting steamer "Nell" was burned to the water's edge last week at Georgetown Mill, near Port Simpson, B.C., along with the lumber wharf, lumber stacks and mill buildings, involving a loss of $25,000, with $2,000 insurance. A number of horses aboard were also lost.

It is said that La Presse, the Montreal daily French paper, with a very large circulation, has been sold to a syndicate for $1,100,000, including the building the paper occupies, which was valued at $400,000. A change of policy is anticipated in its editorship, though the journal itself announces that it will act independently.

On the 13th inst., at Georgetown, Ont., appropriate ceremonies took place in connection with the beginning of building operations on the new mills of the Canada Coating Mills Company. The largest building is to be 200 ft. long by 80 ft. wide, with two large wings, all built of cement blocks made in the vicinity. The corner-stone was laid by Mr. J. R. Barber, M.P.P.

Negotiations are going on for the union of the Amalgamated McKee Creek Mining Company and the McKee Consolidated Mining Company. This step would give an authorized capital of $2,000,000, and work will likely be carried on on a much larger scale than heretofore. Five monitors were in operation last year, but this number will be increased.

BRIEF BAGS

When you see a man carrying a very fine JULIAN SALE bag it does not mean that it was expensive — the chances are that he paid less for it than if he had bought an ordinary bag. Here is our brief bag proposition:

For $5.00

we give the regular 18 inch size in the finest natural grain leather, sewed in frame with trimmings that will not tarnish. Heavy leather linings.

For $6.00

18 inch bag, wider than usual, and heavy frame.

For $7.00

18 inch bag, deeper and wider, with heavy frame. Gold lettered without charge. — Express paid in Ontario.

COUNTY OF OXFORD DEBENTURES

FOR SALE.

By-law No. 519 of the County of Oxford provides for raising $35,000 00 by the issue of debentures payable in 20 equal sums including interest at four per cent. per annum of $2,575 36 on the 1st day of December in each of the years from and including the year 1905 to and including the year 1924.

Sealed tenders (marked tender for debentures) will be received for the above issue of debentures, or any number thereof, addressed to the undersigned, until noon of the 15th day of November, 1904.

Copies of the By-law and the conditions upon which tenders are to be submitted with all necessary information may be had on application by letter to the undersigned.

JAMES WHITE,
County Clerk.
Woodstock, Oct. 10th, 1904.

The assignment is noted of Auguste Bolduc, for thirty years a blacksmith, but latterly keeping a general store at St. Evariste, Que. As a blacksmith he was prosperous beyond the ordinary, but twelve years ago he opened a general store, which he eventually transferred to his sons. Last spring, however, he was obliged to take the business over himself, and now he has apparently been forced to assign, owing about $7,000, with nominal assets of about $8,000.

Mercantile Summary.

The aggregate building permits, which have been issued this year in Winnipeg, up to now, amount in value to over $8,000,000, and it is not unlikely that the year's total will reach $10,000,000. Last year the entire building operations in the city summed up to $5,689,400.

—The Montreal Terminal Railway Company have elected the following board of directors: Mr. D. Murphy, president; Mr. S. H. Ewing, vice-president; T. B. Macauley, James Tasker, J. P. Cleghorn, H. H. Melville, C. H. Catelli, J. P. Mullarkey, and Mr. McKenzie. The company hopes soon to increase its mileage and put its lines on a better footing.

A new post office has been opened near Palmer Rapids, Renfrew County, Ont., which will be known as "Jewellville." This has been rendered necessary because of the establishment in the neighborhood of corundum mines. Mr. J. H. Jewell, of the Corundum Refiners, Limited, has awarded contracts for many dwellings to house the workmen employed by his corporation.

The past season, it is said, has been a very successful one throughout Atlin generally. The water supply has lasted well through the season, and nearly all the hydraulic companies have made satisfactory clean-ups. With the exception of the Pine Creek Power Company, all mining operations are suspended for the season. The Pine Creek Company intend to continue operations until November 1st.

For the last seven years, T. E. Freeland has been doing business as a tailor and clothier at Renfrew. He is reported as having arranged with his creditors to pay 50 per cent. on liabilities of about $1,500.——Charles A. Summers, a blacksmith, of Winchester, Ont., also acting as an implement agent, has become insolvent..——The affairs of R. Franklin & Co., general dealers, at Maxville, Ont., have become involved, and the stock has been attached in the interest of Montreal creditors.

Here is a group of Montreal failures: The demand made upon Wechsler & Brumberg, doing business for a year past as the Canada Fur Mfg. Co., at Montreal, has resulted in their assignment. Liabilities are estimated at about $15,000, and the estate will be a poor one.——Simon & Miller, doing business as the Montreal Clothing Co., whose failure we lately noted, make an offer of 30 cents, which is not being generally accepted, and some of the creditors have instituted criminal proceedings for alleged fraudulent secretion of assets.——Brunet & Desjardins, brick manufacturers, have assigned on demand, and owe about $1,500.——T. Geoffrion & Co., manufacturing boots and shoes, in a limited way, have become insolvent. Mr. Geoffrion has long been in this line of business, but with a very indifferent measure of success. In 1893 he was reported as obtaining an extension, and in 1894 he assigned. Resuming in his son's name, he again failed in 1897, and has since done business under cover of his daughter's name.——The Misses M. & A. Paiement, occupied in a little dry goods business, have assigned, and show an indebtedness of about $1,900.——On demand, an assignment has been made by C. Sauvè, who for some years carried on a dry goods store in the Point St. Charles suburbs of Montreal. In 1895 he became insolvent, and was unfortunate in being burned out last winter, when creditors granted him a compromise of 80 cents on the dollar.

In connection with the recent disastrous fires in Halifax, we understand that Pickford & Black have already placed plans for rebuilding in the architect's hands. Their steamship business is being carried on without interruption. The Plant line has begun to clear away the ground preparatory to rebuilding. Their new premises will be on an extensive scale, so as to give better accommodation both for inward and outward freight. G. P. Mitchell & Sons, importers of sugar, etc., will rebuild on their wharf site. The work of repairing W. Robertson & Son's wholesale hardware premises is already almost completed. The N. & M. Smith Fish Company are carrying on business, as usual. Architect's plans are completed for the building of warehouses on the old site.

Mercantile Summary.

A United States syndicate will shortly begin the erection of a match factory in Rat Portage, Ont.

The contract for building a new flour mill in Fort William for the Ogilvie Company has been awarded to an Indianapolis concern. It is to have a daily capacity of three thousand barrels, and will cost about $200,000.

The estate of Ludger Jodoin, general dealer, at Mattawa, Ont., has been taken in charge by J. M. Harris, Jr., assignee, Ottawa. Jodoin began business in 1902, after several years' experience as clerk, but is said to have been inclined to engage in outside ventures, and to credit over-liberally. He is said to owe about $5,000.

Many who had known him long will be surprised that Mr. Feodor Boas, who died last week, had only reached the age of 54 years. He must have begun business life young, for it is at least 34 years since he went to Montreal from New York as representative of a large textile house. Later he became proprietor of mills at St. Hyacinthe, Que. He was a remarkably shrewd man, of indefatigable business habits and with the instinct of money-making strongly pronounced. He resided of late years in Paris, and died on October 13th, in Edinburgh.

Upon the demand of Warden King & Son, Montreal, an assignment has been made by C. E. Brodeur, tinsmith, at St. Hyacinthe. He learned his trade with his father, and started out for himself in the year 1900, since doing a good deal of work in roofing contracts, etc. He is said to owe $5,000 to $6,000.——Jonas Rooney, a hotelkeeper, at St. Armand Station, Que., is reported insolvent, his creditors being mainly Montreal liquor men.——W. J. McEwen, in the same line of business, at Hull, Que., has also assigned, due, it is said, to a lack of proper attention to business.

Mr. Charles Horace Gooderham, youngest son of the late William Gooderham, senior, died Wednesday afternoon at his residence, 592 Sherbourne street, in his 61st year, after an illness of some weeks. Before coming to Toronto to reside, Mr. Gooderham had lived at Meadowvale, where he had charge of the milling interests of the firm of Gooderham & Worts. At the time of his death he was a director of the Canada Permanent Mortgage Corporation, the Confederation Life Company, and the War Eagle and Centre Star Mining Companies. Until a few years ago he was one of the Board of Regents of Victoria University. Mr. Gooderham was also a trustee for the Home for Incurables.

The production of steel by the open hearth process last year in the United States, according to figures issued by the American Iron and Steel Association, shows that this method continues to lead. The manufacture of Bessemer steel fell off 561,135 tons, or six per cent., as compared with 1902. Open hearth steel, on the contrary, showed a gain of 150,600 tons, or nearly three per cent. The open hearth steel production in 1903 was the largest on record, totalling 5,837,789 tons. It was almost exactly equal to the combined open hearth steel production of Great Britain and Germany, the former country having turned out 3,120,083, and the latter 2,716,859 gross tons in the same year. The combined production of Bessemer and open hearth steel ingots and castings in the United States in 1903 was 14,415,017 gross tons, against 14,826,092 tons in 1902, a decline of more than 410,000 tons.

PICKFORD & BLACK,
HALIFAX.

THE MOLSONS BANK.

The forty-ninth annual general meeting of The Molsons Bank was held in the board room of that institution, in the city of Montreal, at 3 o'clock, on October 17th. The president, Mr. Wm. Molson Macpherson, Quebec, occupied the chair, and others present were: Messrs S. H. Ewing, vice-president; J. P. Cleghorn, Lieut.-Col. Fred C. Henshaw, H. Markland Molson, Wm. C. McIntyre, George Durnford, E. H. Copland, S. W. Ewing, David Crawford, George Filer, George Smith, Edward Fiske (Joliette), A. G. Watson, D. McNaughton, Alfred Piddington, E. K. Greene, Charles E. Spragge, F. W. Molson, Herbert Molson, and J. W. Molson.

The president, having called the meeting to order, requested Mr. A. D. Durnford to act as secretary, and after that gentleman had read the advertisement convening the meeting, the president named Messrs. Charles E. Spragge and George Durnford to act as scrutineers.

The general manager, Mr. James Elliot, then read the annual report of the directors as follows:—

Report.

The directors have pleasure in presenting this, the forty-ninth annual report of the business of the bank for the year ending 30th September, 1904.

We have had another prosperous year, the net profits being $457,290.72, of which the usual dividends at 9 per cent. have taken $266,929.32, and $150,000 has been added to the reserve fund. The balance now at credit of profit and loss account is $37,077.18.

The reserve fund now equals our paid-up capital of $3,000,000.

During the year only one branch has been opened, at Wales, Ont.

Thinking it advisable to provide for better and permanent quarters for our Toronto Branch, a site on Bay street has been purchased, and when building conditions are favorable, we propose to erect thereon suitable premises.

The branches have been inspected as usual, and the officers of the bank have discharged their duties faithfully.

WM. MOLSON MACPHERSON,
President.

Gal 2 Molsons Bank

PROFIT AND LOSS ACCOUNT.

Balance at credit of profit and loss account on 30th September, 1903.		$ 25,755 91
Net profits for the year, after deducting expenses of management, reservation for interest accrued on deposits, exchange and provision for bad and doubtful debts		457,290 72
		$483,046 63
Appropriated as follows:—		
97th dividend at rate of 9 per cent. per annum, 2nd April, 1904..	$131,929 32	
98th dividend at rate of 9 per cent. per annum, 1st Oct., 1904.	135,000 00	
Business taxes ...	9,661 58	
Expenditure on bank premises at branches	9,378 55	
Contribution to officers' pension fund	10,000 00	
Added to reserve fund	150,000 00	
		$445,969 45
Leaving at credit of profit and loss account, 30th September, 1904.		$ 37,077 18

The President then said:—

"The statement we have submitted to you is gratifying to the management of the bank, and is, I am sure, pleasing to the shareholders. We have paid the usual dividend of 9 per cent., passed $150,000 to the reserve fund, have contributed to the officers' pension fund, to the bank premises, and have carried a balance to profit and loss of $37,077.18.

"The policy of The Molsons Bank has been progressive, inasmuch as we have increased the capital of the bank as the requirements of the country demanded, and have protected the interests of the depositors and shareholders by building up the reserves, which now equal the paid up capital of $3,000,000, and are invested so as to be promptly realizable and available to meet any demands.

"Your directors were asked a few years ago to increase the dividend, but we favoured the policy of increasing the reserve fund until such time as it equaled the capital. That time having now arrived, with continued prosperity, we hope to see the dividend increased to 10 per cent., but we must continue a policy of safeguarding the interests of the bank, and add to our immediate available assets, for lean years must follow the years of great prosperity which have blessed our country.

"The abundant harvests, more particularly in Manitoba and the Territories, have contributed very largely towards the general prosperity of Canada, and with its growing population and wonderful resources, we foresee the re-

SOLD BY ALL LEADING WHOLESALE HOUSES.

quirements for increasing transportation, and a continued demand for banking facilities. The large wheat crop of this year, and high prices now being paid for wheat, will greatly enrich the country, and will stimulate the desire to increase the acreage under cultivation. The necessity certainly exists for a greatly enlarged production of grain in Canada, as the following figures will show:—Great Britain imported in wheat,, in 1903-1904, 27,000,000 quarters, and the estimated amount of wheat which Canada will ship in 1904-1905, will be about 2,000,000 quarters.

"With such an enormous demand from Great Britain for our agricultural and other products, the future of Canada is of the brightest, and, if we continue to enjoy good harvests we may reasonably hope for satisfactory business conditions.

"The paid up capital of the chartered banks in Canada now stands at $79,193,023. During the year it has increased by $2,532,727.

"The deposits of the chartered banks, Post-Office, Government Savings Bank, and district savings banks, have increased upwards of $48,000,000, showing a continued remarkable growth.

"I beg to remove the adoption of the annual report."

This was seconded by Mr. S. H. Ewing, vice-president.

Thanks to the president and directors were moved by Mr. E. H. Copland, seconded by Mr. Edward Fiske, of Joliette, and carried. The vice-president replied.

Mr. S. H. Ewing moved a resolution of thanks to the general manager and staff, which was seconded by Mr. A. G. Watson, and carried. Mr. Elliot made reply.

The election of directors was then proceeded with, the president suggesting that, if agreeable to the meeting, one ballot be cast.

This was unanimously concurred in.

Mr. J. W. Molson asked a question regarding the bank's balance in England, to which the general manager replied.

The scrutineers then reported the re-election of the retiring Board of Directors, namely, Messrs. J. P. Cleghorn, S. H. Ewing, Lt.-Col. Fred. C. Henshaw, H. Markland Molson, Wm. Molson Macpherson, Wm. C. McIntyre and W. M. Ramsay.

At a subsequent meeting of the directors, Mr. Wm. Molson Macpherson was re-elected president, and Mr. S. H. Ewing vice-president for the ensuing year.

⁂

We observe that the Record Foundry and Machine Company, of Sackville, New Brunswick, has opened an agency on Colborne street in Toronto.

The Metal Shingle and Siding Company's plant, at Preston, Ont., was on the 19th inst. destroyed by fire, for the second time this year. The loss is estimated at $30,000, covered by insurance.

It is stated in a Toronto daily that the Calgary Board of Trade has sent a communication to T. C. Irving, general manager of Bradstreet's, Toronto, requesting that the Bradstreet Company open an office there for the convenience of the wholesale trade and bankers.

⁂

BOOTS AND SHOES IN JAMAICA.

Mr. G. Eustace Blake, Canadian commercial agent in Jamaica, B.W.I., says that while imports of boots and shoes into that island from Canada may be said at present to be insignificant, compared with the total importation, yet the consumers there are distinctly in favor of Canadian goods. The United States manufacturers, however, having made a determined attempt to win the market, they now monopolize 60 per cent. of the trade which for the size of the population, is a large one. Canadian trade, however, might easily be increased; but manufacturers must be prepared to adapt themselves to the market, and not expect the West Indians to adapt themselves to what the former think may be suitable. It has been found in practice that the only way in which a new article can be firmly established is either to send one's own representatives or appoint some lively local agent to push the lines. As the former method can only be adopted by very extensive concerns, the latter would seem to be the most practical. The agent must, however, be always supplied with a full line of samples, and his instructions as to market requirements be complied with. The manufacturer must also be prepared not only to conform with the style of goods required, as also grade and price, but must also liberally meet the trade conditions prevailing. As to what class and style of goods are most in demand, the following are popular: Ladies' glacie bar shoes, both low and high heels, of various grades; ladies' court shoes; ladies' mock kid and tan Oxfords; ladies' button, lace and elastic side boots; girls' glacie lace and button boots; men's black and tan lace, button, and elastic side boots and shoes; men's Oxfords (both black, patent and tan); men's courrt shoes; men's white canvas and buckskin boots and shoes; boys' and youths' satin and box calf boots and shoes, also in canvas. Some demand also exists for rubber soles. Slippers of every description for ladies and gentlemen. The better and middle grade of boots or shoes should be placed in separate cardboard boxes, then packed in convenient sized cases, paper-lined. The wrapping, in all grades, should be of an attractive nature. Invoices must always disclose the exact contents of each case. The lowest grades find the best sale, on which the closest retail profits are made. Appearance would seem to be everything, the question of durability taking second place with this particular class of trade. The tariff duties amount to sixteen and two-thirds—ad valorem—per cent. from all countries on first cost.

As a business training institute this college is doing splendid work

⁂

A BOOK ABOUT AUTOMOBILES.

We have received a handsomely bound volume entitled, "Self-Propelled Vehicles," by J. E. Hourans, A.M. It treats of the general principles of automobile construction, and operation, including steering devices, underframes, wheels, tires, bearings, lubricators in the opening chapters. Then follows an exhaustive account of the theory, construction and operation of gas engines, occupying over 100 pages. Several typical engines are taken up and discussed separately, and their properties, as regards balance, speed and power, are discussed. The explanations of the governing devices are clearly written, while the discussion of ignition, including the hot-tube, and the primary and secondary sparks, should prove of value to many who, while being the owners of various types of auto-vehicles, yet have but hazy ideas of their mechanical construction.

One feature is the extensive chapter devoted to the description of leading types of gasoline vehicles, including the most important of American build. In this the reader is informed as to the details of the transmission and control apparatus in each case. The chapters on electric vehicles are also full and certain to prove of practical use to the owner and chauffeur. Taking the subject of electrical apparatus from the fundamental principles of circuits and batteries, the discussion

passes to the theory and operation of generators and motors; the laws of motor operation; the laws involved in computations of speed and power, and the varieties of motor suited to road carriages. Electricity meters are described and illustrated in a brief chapter, and the principles underlying storage batteries, their construction and care, are outlined. The merits of several types of steam carriage are fully set forth. It closes with a chapter on "Gasoline Vehicle Management,' very complete, and full of "useful hints;" another on gasoline cycles that covers the principles involved in this type of motor. The book, which is well bound and consists of 672 pages, is published by Theo. Audel & Co., New York City.

UNITED STATES FINANCES.

Henry Clews & Co., in their weekly circular, dated New York, October 15th, say: Strong, steady and skilful leadership, backed by favorable general conditions, have produced an active and at times buoyant stock market. Occasionally prices weakened under fresh realizing, but good buying generally developed on the declines and the upward movement was easily renewed owing to the spread of confidence induced by favorable outside circumstances. The recent Government crop reports, which forecasted larger crops of corn, wheat and cotton than had been expected, were the principal sources of increased hopefulness. Railroad managers have been very hopeful for some weeks past, and current reports of earnings bear out their expectations. In the fourth week of September, thirty-nine roads reported gains of nearly 6 per cent. over last year, and in the third week of September forty-nine roads show a gain of over 8 per cent., and the prospects are that October returns will be equally good. Bank clearings show a remarkable increase, the gain last week at the leading cities being over 30 per cent. Improvement in the iron trade progresses and railroads are placing orders for rails, engines and cars with more freedom, which is significant. Another favorable factor is the turn in our foreign trade. During September our exports showed an increase of nearly $13,000,000. In the monetary situation there is nothing perplexing to be faced. The crop movement is not yet at its maximum, but a month hence funds should begin to return to this centre, and the surplus reserve, which is much larger than in previous years, seems ample to carry us through until the influx movement begins. The increased firmness of money in Europe naturally attracts some attention, as in event of strain there and ease here an outflow of gold might be expected. The speculative outlook is somewhat conflicting. Outside conditions are excellent, and Wall Street appears to have amply discounted such improvement. But the market is in very strong hands, and the big holders and big bankers who bought securities on the last decline are committed to a bull market in order to distribute their surplus holdings. Evidently their operations are not completed. Unless all signs fail, they intend to carry prices still higher, and having succeeded in awakening the speculative spirit their chances of success have correspondingly improved.

* * *

—Old Gentleman—Since your uncle left you that legacy, Mrs. Casey, you must find your path in life much smoother. Mrs. Casey—Shure! Oi dunno, Sor. Oi foind the more ye hov to ate, the more dishes there is to wash.—Brooklyn Life.

—The Intercolonial Railway has started a service over its lines for the bringing in of a daily supply of fish during the winter months from New Brunswick and Nova Scotia points to Montreal. This will no doubt be of great benefit to the fishing industry of our Maritime Provinces.

—A fisherman was drowned close to the shore and his body was not recovered until the following evening. When it was taken from the water a collection of very large crabs clung to the clothing, and these the minister detached and sold to help the widow, who appeared to be inconsolable. When the money was being handed to the woman, the giver asked how she wished the body to be disposed of. "D'ye no think," she said, ',we could do waur than just set him again?"

—As to the heavy branches of the textile trades, reports from Glasgow continue somewhat conflicting, and compared with twelve months ago, the orders already booked are under the average. Colored weaving in Glasgow is slow to mend, and many looms are standing. Indeed, it is the job weavers that appear to be faring best. An improved enquiry is being experienced for linen goods, although, meantime, the expansion is confined to the export trade. United States and Canada are taking off domestic linens, and Australia sheetings and towellings. At home, the bulk of the new business is for heavier fabrics. However, manufacturers are preparing for a freer trade in fine descriptions for home markets.

—An American inventor, we are told by an exchange, has discovered a process for preparing cereals for eating, without causing them to lose their original form. The grain is kept in an air-dry condition under gas pressure to a point above the boiling point of the liquid contained in the starch granules of the cereal at normal atmospheric pressure for a period of time not long enough to permit the escape of too much of the liquid contained in the starch granules of the cereal through the granule coatings by diffusion. While substantially maintaining the same temperature, the pressure is removed with such rapidity that the liquid will suddenly flash into gaseous form or steam, which results in an instantaneous expansion, or explosion, of the entire mass of the cereal into several times its original volume. This expansion is such that the grains or kernels of the cereals preserve their exact original shape and become very much enlarged and porous copies of the originals, provided the heat applied is sufficient to render the granule material sufficiently coherent after the explosion.

TORONTO MARKETS.

Toronto, October 20th, 1904.

Chemicals and Drugs.—Owing to damage to this season's crop by drouth, prices have advanced 5c,. but values are by no means firm even at present low rates. Stocks are fairly large. Quinine also has gone up a cent or two. Carbolic acid is strong, owing to large requirements in the Far East. Cantharides is scarce and firm. Cod liver oil continues firm, and may advance. Ergot is less firm. The English export trade is reported to be still slack. New York advices speak of a normal trade being done in drugs. Locally, business is fairly good.

Dry Goods.—Very little in the way of new features in the dry goods trade presents itself for comment this week. Trade has not been above the average, though such goods as blankets and flannels are moving out quite satisfactorily. Cotton prices keep very firm. There is a good demand for dress goods.

Flour and Grain.—Ninety per cent. patents are selling at $4.35 to $4.45, in buyers' bags, middle or east freights, but trade is on the quiet side.. Rolled oats, too, are quiet, but prices keep unchanged. There is nothing new in millfeed. Wheat, both Ontario and Manitoba, is not coming in very fast, farmers taking advantage of the fine weather to finish their fall plowing, etc. Ontario wheat has dropped a cent or two and is dull at the decline. Barley is the same. Oats are a cent lower. Rye is a cent or two higher. Other grains are about the same.

Fruits and Vegetables.—Considering the lateness of the season, good supplies of fruit are coming forward. Grapes are more plentiful on the market than might have been anticipated. Quotations show but little change, prices keeping very steady. They range about as follows: Peaches, white flesh, basket, 30c. to $1.15; apples, barrel, $1 to $1.50; pears, 20 to 35c.; pears, open baskets, 40 to 60c.; plums, 65 to 75c.; Canadian cantaloupes, 24-qt., 35 to 50c.; grapes, Delawares, 25 to 50c.; grapes, Concords, 15 to 25c.; cranberries, per barrel, $8 to $8.50; do., per box, $3; oranges, Jamaicas, box, $3.50 to $8.50; lemons, Messinas, $3 to $3.50; do., St. Nicholas, $4; do., Verdillis, $4; bananas, 1sts, bunch, $1.25 to $1.75; do., 8's, bunch, $1.10 to $1.25; do., red, $1.50 to $2.25; California peaches, $1; Tokay grapes, $1.50 to $2.50; tomatoes, 20 to 30c.; cucumbers, basket, 20c.; green peppers, basket, 20 to 30c.; peppers, red, 40 to 50c.; egg plant, basket, 20 to 25c.; Can. green corn, doz., 8c.; Canadian celery, doz., 40 to 60c.; sweet potatoes, $3 to $4; Spanish onions, case, $3; do., small case, $1.

Hardware.—The movement of goods of the shelf kind is quite good, and large quantities are being rushed through before the close of navigation. In some lines we believe deliveries are a little slow, manufacturers being put to it to keep pace with the demand. Building operations are in full swing, and there is a rush to get some articles required therein. There is considerable briskness in the demand for

cement, due to this cause. Prices keep about the same as for the last week or two. Pig iron is firm in sympathy with the improved conditions in the States. The movement is comparatively good. For other heavy metals, the enquiry is normal.

Groceries.—All grades of sugars this week declined 10c. per cwt., as a result of weakness in the New York market, and the heavy crop of beets in Europe. Teas continue in average to good demand, though prices in a few grades have fallen a little during the last month. Prices for canned fruits are now on a more fully established basis. As a rule, they show a decided advance compared with last year, except apples, and blueberries, which are both a little lower. For canned vegetables, the situation is strong. Taken all round, the grocery houses are doing a good business throughout the country.

Hides and Skins.—Sheepskins have advanced to 80c. Business in hides continues brisk with moderately good receipts. Calfskins are quiet, but prices are steady. Tallow is firmer.

Live Stock.—Values of cattle, both butchers and exporters, continue to be affected by the preponderance of poor stock. This week, not very much of any kind came forward, but prices remained easy, the demand being slack also. Trade was also dull in feeders and stockers, very few being wanted. For milch cows of good grade, the enquiry is better, and prices have been stronger at $30 to $60

THE COMMERCIAL
The Weekly Financial, Commercial & General Trade Newspaper of the Great West

Reaches direct 90 per cent. of the retail, wholesale and manufacturing trades of Northwestern Ontario, Manitoba, the Territories and British Columbia in advance of, and publishes more interesting commercial and financial news than any other similar newspaper in Canada.

Do you want to sell or increase the sale of your goods in these, The Best Buying Provinces in Canada?

Estimated that 200,000 new settlers will arrive this year. Will the retail merchant offer them your goods?

Our advertisers our best references. We beg the favor of an enquiry.

THE HUGH C. MacLEAN CO., Limited,
Publishers, Winnipeg.

Eastern firms should subscribe for The Commercial and keep posted on Western trade

each. Everything in the way of sheep and lambs sold well, as was also the case, to some degree, for calves. Live hogs have declined 10 to 15c. per hundred weight, and the demand is poor.

Provisions.—Little is being done in butter. Stocks are large both in hands of dealers and, it is believed, in the country. Cheese is much firmer in tone, owing to reports from the Old Country. A fractional advance is quoted. Eggs continue quite firm, but no advance is registered, there being large stocks of stored stock in hand, though few fresh are coming forward. Spring chickens sell at 11 to 12c. Wild duck is not coming forward freely, perhaps owing to the mild weather. Hog products are quite firm with only light stocks in hand. Lard is particularly strong. Packing operations have been delayed by the slow coming to maturity of hogs this season.

Wool.—While prices are held quite firmly, not much business is passing, the mills holding off.

* * *

MONTREAL MARKETS.

Montreal, 19th Oct., 1904.

Ashes.—Owing to the great scarcity of supply, as high as $6 per cental has been paid within the last few days for a lot of No. 1 pots, of good tares, but this is an extreme figure, about $5.90 would be about a general quotation; seconds, $5.40 to $5.45. In pearls there is still an entire absence of business.

Boots and Shoes.—Fall deliveries of boots and shoes are for the most part completed, and commercial travellers are devoting all their attention to the securing of spring orders, which are being booked in fair volume. So far as can be learned, there are no very large orders for leather being placed by our manufacturers of footwear at present.

Dairy Products.—The steadier tone in the cheese market referred to last week, actually developed into an advance, which has been fairly sustained on spot, though British buyers seem indisposed to accept the higher prices. Finest Ontarios are quoted on spot at 9⅜ to 9⅝c.; Townships, 9⅛ to 9¼c.; Quebecs, 9 to 9⅛c. per lb. these figures being for fall goods. The conditions in the butter market are in buyers' favor. Present quotations are 19 to 19½c. for fine creamery; dairy, 15 to 16c. The shipments of cheese from this port last week reached the very fair figures of 94,643 boxes, but there is still a shortage of over 364,000 boxes as compared with the figures at this date in 1903. Of butter there were shipped last week 18,151 packages, which is 6,372 more than for the same period of last year, and for the season to date the total increase is 136,196 packages.

Dry Goods.—The weather has been too bright and summery since last writing to meet the wishes of dry goods retailers who expect to sell fall and winter goods, and wholesale dealers, in some cases, find sorting business slower; but a fair proportion of business in spring orders is being done. Collections are hardly as good as in September. Foreign advices denote no striking change in the markets abroad, and in domestic textiles no recent fluctuations of price are to be noted.

Groceries.—The Mediterranean steamer, "Escalona" is now in port and her manifest shows 72,433 half-boxes of Valencia raisins, 600 quarters, and 1,200 eighths. Her quota of currants comprises 1,020 cases, 13,380 halves, 1,349 quarters, and 25 barrels. The fruit is said to be opening up well. The second direct boat, the "Jacona," left Cadiz, her last port of call, yesterday. The market for Valencias at Denia is reported slightly easier; currants are, if anything, a little firmer at Patras. The feature of the week is a decline of 10 cents a cental in all grades of refined sugars, making the present factory price for standard granulated $4.55. This decline is due to competition between New York refiners, resulting in a cut there, and is not borne out by the statistical position of the raw sugar market. Molasses continues to rule very firm. The stiffness in canned goods is fully sustained, and the pack of corn is estimated at about 75 per cent. of an average, and of tomatoes only 55 per cent..

Hides.—Dealers report a fair volume of business at unchanged figures. They are buying No. 1 beef hides at 9c. per lb. and selling them at 9½c. Lambskins are unchanged at 80c. each.

Leather.—There is nothing startling to report in this market. Apparently the boot and shoe travellers are looking sharp after spring orders, Manufacturers here are not placing any large orders for leather just now, but sole leather tanners are so busy filling British orders, that some local dealers complain they cannot get all the stock they want. Values are all steady.

Agencies in all principal Towns and Cities in Canada.

Metals and Hardware.—In general hardware business is only moderate, and while the demand for heavy metals may be called fair, it is considerably short of what prevailed at this time a year ago. Ingot tin keeps on stiffening, and 32c. per lb. is now quoted as the lowest figure in an ordinary way; copper is again stronger at 14 to 14¼c., and lead at $3.30; spelter, $5.75; antimony, 7 to 7¼c. Galvanized sheets are easy at $4 to $4.25, as to brand, and some cutting is reported in galvanized Canadas, sales being reported at something under $3.80 for fifty-twos, though the general quotation is $3.90. Ordinary Canada plates have also been sold at cut rates, as low, it is said, as $2.15 for fifty-twos of 28 gauge, and $2 for 24 gauge, but it is a question if these figures could be duplicated, and $2.25 to $2.30 is the general price in an ordinary way for the former kind. Some sales of low grade Sydney iron are reported at $16, but general pig iron quotations are as given last week. Domestic bars are still quoted at $1.70, and bar steel at $1.80 to $1.90.

Oils, Paints and Glass.—Of business there is a moderate volume passing, but owing to the low prices of oil, leads, etc., the aggregate in value looks small as compared with last year. Linseed oil is, if anything, easier, with sales in fair quantity at 42c. per gallon for raw, but the general quotation for jobbing lots is 43 and 46c. for raw and boiled, respectively. Fish oils are little asked for, and are unchanged in price. Turpentine is also stationary at 81½c. per gallon in single barrels. Leads continue to be sold at cut rates, and while $4.50 is the nominal figure for pure, $4.25 or even lower is taken, it is said, rather than an order should go to a competitor. Glass is very firm at the advance quoted last week, and any further supplies of Belgian glass will be very hard to get until the labor situation be relieved.

30 Days of Grace

for the payment of Renewal Premiums is one of the many privileges the SUN LIFE OF CANADA grants its policy-holders. Should the Assured die at any time within the days of grace the claim would be promptly paid, even though the premium had not been paid.

THE METROPOLITAN LIFE INSURANCE CO.
(INCORPORATED BY THE STATE OF NEW YORK.)

The Company OF the People, BY the People, FOR the People.

ASSETS, $105,656,311.60

Proof of Public Confidence

This Company has more premium-paying business in force in the United States than any other Company, and for each of the last 10 Years has had more New Insurance accepted and issued in America than any other Company.

The Number of Policies in force is greater than that of any other Company in America, greater than all the Regular Life Insurance Companies put together (less one) and can only be appreciated by comparison. It is a greater number than the Combined Population of Greater New York, Chicago, Philadelphia, Boston, Toronto and Montreal.

Significant Facts

This Company's Policy-claims paid in 1903 averaged in number one for each minute and a third of each business day of 8 hours each, and, in amount, $89.00 a minute the year through.

THE DAILY AVERAGE OF THE COMPANY'S BUSINESS DURING 1903.

359	per day in number of Claims Paid.
6,297	per day in number of Policies Issued.
$1,303,559.06	per day in New Insurance Written.
$98,582.76	per day in Payments to Policy holders and addition to Reserve.
$53,841.18	per day in Increase of Assets

BUSINESS IN THE MARITIME PROVINCES.

A resumé of the conditions prevailing in different industrial and commercial enterprises in Nova Scotia and New Brunswick, and the results of the year so far in them, may assist us to arrive at the general situation. Trade generally is quieter down there than in last October, and the prospect for an active winter cannot be called bright on the whole. The reasons assigned for such a prediction by our Halifax correspondent are the low price of lumber and the consequent reduction in the cut; the curtailment of mining operations at the principal collieries; and the lessened returns from this year's agriculture.

The partial failure of the fisheries on our Atlantic Coast is to some extent made up by the high prices obtained, and therefore the fisheries will not fall far short of the usual financial receipts. Then, as we elsewhere show, the lumber trade in neither New Brunswick nor Nova Scotia is in a satisfactory state. At a meeting of the Nova Scotia Lumbermen's Association held at Truro last week, the low price of spruce deals on the English market was discussed, and a resolution was unanimously adopted to limit the cut of logs during the coming winter to one-half. A number of large operators announced that they would not put any men in the woods at all during the coming season. This decision of the Lumbermen's Association if carried into effect cannot fail to affect several lines of business in this province. As to the second matter alluded to, namely, the unproductivity of the farms, an index of the true state of affairs in Eastern Nova Scotia is seen in the arrival at Port Williams last week of sixty-two head of cattle from Antigonish, to be sold at public auction. Owing to the scarcity of hay, farmers in Pictou and Antigonish are selling off their stock in large numbers, and as a result there has been a sharp decline in the price of native beef on this market. The apple crop is not nearly so remunerative as last year. The Gravensteins were so badly spotted that much of the fruit was only fit to be used as food for stock. Other varieties were of fair quality and color, but a large proportion were blown from the trees. The prices on the other side have been low. Speculators have hesitated to buy apples outright, and many farmers have been compelled to ship their own apples across on consignment. So far this season the apple shipments at Halifax have been about 200,000 barrels. The total shipments last year for the entire season exceeded half a million barrels, and the price was fully 50 per cent. better. The coal mines of Cape Breton, in some instances, are working only a single shift, and it is understood the Dominion Coal Company will mine but little coal this winter after the close of navigation, it having been found unprofitable to bank coal during the winter, as it causes extra handling to get it aboard the barges in the spring.

The causes which are mentioned above must have some effect upon the winter's trade, but it is by no means to be inferred that people of the Provinces are face to face with an absolutely dull season, for the activity in many lines will offset the circumstances we have mentioned to quite an extent. All Maritime Province factories, indeed, are exceptionally busy, and there is no lack of orders both locally and from the west. Labor will find abundant employment, if not in one direction, in another, and there is no need of taking a pessimistic view of the situation. While wholesale business has to some extent been interfered with by the Federal election contest, there has been a fair volume of trade in the last two weeks. In staple cottons there has been great activity, the demand having been much stimulated by the slightly lower prices now ruling. During the past spring and summer the high prices caused retailers to hold off, and now that an opportunity is afforded to replenish stocks at near the old figures, orders have come in very readily. This has had the effect of materially increasing sales of local wholesale dry goods houses so that 1904 will come very close to last year's record.

WINNIPEG GROWING.

The rapid growth of Winnipeg imposes much work upon the municipal officers of the city in all directions. But perhaps the most noticeable effect is produced in the engineer's department. Here work is in hand, on and under the streets, and in the pumping station and plant, to the extent of nearly a million dollars. The recent fire has shown in what danger the city may be at any time through lack of water-pressure for fire purposes, and instant effort is being put forth to have this rectified. The probable cost of the pumping station and plant now being constructed is, we are told, $80,000, and the new water mains will cost more than $90,000. Paving the streets is a heavy job, the residential part of the city is growing so. The cost of asphalt paving now being laid down is placed at $273,000; that of macadam at $240,000; of cedar block paving at $6,000. Then there are sewers, $390,000, of which the biggest contract is the Aubrey street trunk sewer. Granolithic walks to the tune of $71,000 are being put down, and $15,000 worth of plank walks. The aggregate cost of these is placed at $954,000, so that the statement recently made that a million dollars' worth of work is being prosecuted by the city engineers is not exaggerated. And indeed the rate of the city's expansion can hardly be exaggerated.

Winnipeg journals resented, we remember, the notion that the fire-fighting apparatus of eastern cities was any criterion for Winnipeg, or that Winnipeg underwriters ought in any sense to be governed by the fire premiums exacted in the east of Canada. "The rates should be based," said the Winnipeg Tribune some months ago, "not upon non-efficiency of the fire brigades in eastern towns and cities, but upon the state of our own brigade and the conditions prevailing here." Would it be ungenerous to remind that journal of its words, in the light of the recent fire? Then the aldermen were discussing the starting of a fire insurance fund by the city, and paying the usual premiums into that instead of paying them to insurance companies. This was only three weeks before the fire of 11th October in that city, which destroyed property worth $500,000 or $600,000, and cost the insurance companies, we are told, over $300,000. Alderman Cox and Alderman Harvey thought the idea a good one; "the city had been paying insurance for years, and had never had any serious fires. The buildings are well scattered, making it almost impossible for a fire causing great loss to occur." Have these gentlemen seen the ruins of Bulman's block, and of Ashdown's warehouse? Were they at the fire of October 11th, and will they admit that it was serious? Have they any more sense now than they had on September 21st? We observe, by the way, that the aforesaid Alderman Cox was entrusted with the renewing of policies for some $64,000 on city property of various kinds, the said policies expiring on 1st October. It happened that none of the city property so insured burned at the recent fire. But we should be glad to know if Mr. Cox adheres to his rosy view of municipal fire insurance, or whether, since the fire, he has renewed those policies.

CANADIAN COMMERCIAL AGENCIES.

It is pleasing to hear, as we do from London, from our correspondent in Manchester, and from several Canadian visitors, accounts of the improvement in the official representation of Canada by commissioners at various points in the United Kingdom. Improvement, we mean, as compared with ten or twenty years ago. The Canadian offices are better fitted; the literature they are furnished with is better; the men are more qualified, for they are largely Canadians of experience, and, therefore, able to talk about the country understandingly. Take, for example, the Commercial Agent of Canada in Birmingham, Mr. Peter B. Ball. He has established himself well in the confidence of the manufacturers of that important city, even although he has told them some very plain truths about their lack of suitable enterprise in seeking for Canadian trade. A recent visitor to Birmingham tells us that Mr. Ball is giving, of late, lectures on Canada, illustrated with lantern slides, after the fashion set years ago by our Grand Old Man, Lord Strathcona. And he takes pains, our informant adds, to explain minutely to his audiences matters which tend to root out of the minds of his auditory the absurd notions about this country and its people which have so firm a hold in the imagination of English people.

We have been told that the United States authorities make a practice of bringing their consuls or commercial agents back from foreign lands to their own country every two years in order that they may not lose touch with people or things American. Similarly, might it not be a good thing for our Ottawa authorities to bring back men like Mr. Larke, the excellent Canadian agent at Sydney, Australia, who has not been home for years, Mr. Burke, of Jamaica, and Mr. Ball, in order that they may confer face to face with our manufacturers and exporters for several months and see for themselves the progress that their own country is making. It is noteworthy that Mr. Ball has been at some pains to expose to the exporters of the Black Country the dishonest methods by which an unscrupulous agent in England for two Montreal trade journals has for several years been getting advertisements from British export houses. The Monetary Times was the first to expose, some two years ago, the doings of this clever cheat of a Doctor, so-called. We showed, on the authority of one of the departments at Ottawa, how baseless was his claim to act on behalf of the Canadian Government; and how iniquitous was his pretence that the weekly he represented was subsidized by the Government. It is not a little curious that British exporters should be fooled as they have been by this man; but it is also true that his mendacity has greatly injured the reputation of Canadians in Britain.

THE LUMBER TRADE.

The lumber market in Ontario is distinctly firmer and it is by no means improbable that prices will take an upward turn before long. Even now, though so far no actual stated quotations have been changed, the prices realized show fractional advances, especially in culls. The causes for this state of things are not far to seek. Primarily, it is due to the improved state of business in the United States, and the better demand for building and other purposes. For a long time, purchasers there have been holding back, but the time has come when they can do so no longer. Another thing which counts is that it has now become a realized fact that the cut of pine lumber in Ontario will not be more than 60 per cent. of that of last year. In Wisconsin, and other of the northern lumber States, too, the production is growing less each year through natural causes, and though the place of white pine can be taken to a certain extent by other woods, such as southern pine and so forth, yet these facts all serve to accentuate the growing firmness of the market.

In British Columbia, the lumber, and especially the shingle, trade is still more or less demoralized. Mill men are said to be selling their product at cost so as to meet the growing and combined competition from across the line. Prices are said to be lower than ever before known. The recent conflagrations throughout the coast timber belt are likely to have serious effects on the lumber trade. Estimates of the damage done by fires vary from one billion to two billion feet. This would more than pay for a vastly increased system of protection on the part of the Government.

In the Maritime Provinces the season's trade in lumber, so far as it has gone, may be described as poor, prices in the British market having been anything but profitable. There are prospects, however, of an improvement setting in shortly in this respect. As to the probable cut in the coming season opinions differ, but they seem to point to a reduction in New Brunswick of about one-third from the average, and in Nova Scotia of almost one-half. All said, therefore, while the present position of the industry is not very brilliantly promising, there are elements of hope.

FIRE INSURANCE IN CANADA.

To give, in a page, the essence of what occupies some twenty pages of the report of the Canadian Superintendent of Insurance for the year 1903, is no slight task. But the staff of this journal is accustomed to condensation, as our readers have found, and we shall proceed in the attempt.

Taking the premium receipts of all licensed fire insurance companies doing business in the Dominion as a measure of their transactions, it will be seen that fire insurance in Canada has doubled in fourteen years, for the premiums of 1903 were $11,384,762, where those of 1889 were but $5,588,016. And the losses are doubled also. The losses paid were $5,870,716 in 1903, while they were $2,876,211 in 1889, showing a merely fractional difference in ratio of loss; for where in 1889 the losses were 51.47 of the premiums, in 1903 they amounted to 51.57 per cent. But between these two periods the variation in percentage of loss was great, going, for example, up to 74.37 in 1893 and 71.92 in 1895 and down to 58.98 in 1898; up again to 93.31 in 1900—a disastrous year—and then down to 39.26 in 1902, which last was the lowest on record.

Comparing last year with its immediate predecessor, the cash received for premiums in the former was, as we have said, $11,384,762 and the amount paid for losses $5,870,716; while in the latter premium receipts were $10,577,084 and losses paid $4,152,289. Thus, while the premiums of 1903 were less than one per cent. greater, the losses by fire were 29¼ per cent. greater. How the losses were distributed among classes of companies this table will show:

Group.	Premiums.	Losses.	Per cent. of loss.	Same for 1902.
Canadian companies	$ 2,282,498	$1,209,678	53.00	42.09
British companies	7,334,432	3,803,764	51.86	39.22
American companies	1,767,832	857,274	48.49	35.73
Total or average	$11,384,762	$5,870,716	51.57	39.26

The proportion of loss was thus greatest among the Canadian companies and least among the American, leaving the British at 51.86 per cent., which is slightly above the average of the three. A table on page ten of the advance report shows the average rate of premium charged per cent. of risks written to have been the same in the case of both the Canadian and American companies, namely, 1.53, while the American companies' rate was slightly lower, at 1.49, the average of the whole thirty-six companies—nine Canadian, nineteen British, eight American, was 1.50 per cent. The main items in the case of the three groups of companies was as under:

	Gross risks written 1903.	Gross premiums 1903.	Rate per cent. of risk.
Canadian companies..	$126,909,590	$ 3,316,922	1.53
British companies....	580,718,653	8,635,620	1.49
American companies.	136,050,121	2,085,639	1.53
Total	$933,274,764	$14,038,181	1.50

	Net premiums.	Paid for losses.	Ratio loss to premium.
Canadian companies..	$ 2,282,497	$1,209,678	53.00
British companies.....	7,334,432	3,803,762	51.86
American companies..	1,767,831	857,275	48.49
Total	$11,384,760	$5,870,715	51.57

The gross amount of policies, new and renewed, taken during the year by fire companies was $933,274,764, which is greater by $41,224,878 than the amount taken in 1902. The premiums charged thereon amounted in 1903 to $14,038,181.55, being $950,930.95 greater than the amount charged the previous year. The rate of premiums (1.504) is higher than that of 1902 (1.467). The loss rate (51.57) is 12.31 per cent. greater than the loss rate of the previous year (39.26) and 15.42 per cent. less than the average loss rate (66.99) for the past thirty-five years."

There was a small increase in the gross amount of risks written last year over the year previous; in the case of Canadian companies its amount was $1,360,081. But the increase of risks taken by British companies was $24,025,828, and that of American companies $15,838,969. Indeed, nearly two-thirds of the whole business was done by the British companies.

For every hundred dollars of premiums received by the British companies in 1903 there was spent on the average $51.86 in payment of losses and $29.56 for general expenses. In 1902 their loss rate was $29.32, and the general expenses $28.42 per $100 of premium. "Hence, these companies have done a larger volume of business than in 1902 at a somewhat higher rate of premium, a higher rate of expense, and at a much higher rate of loss."

The favorable balance of English companies (premiums over losses) of $140,000 up to 1876 was changed by the St. John conflagration of 1877 to an unfavorable balance of $4,070,000. And it took ten years to convert this into a favorable balance of $341,000 in 1887. This balance on the right side of the ledger increased up to the year 1893, when a setback to the tune of $205,000 occurred. Again in 1900 (Ottawa and Hull conflagration) and 1901 there were further set-backs. But 1902 was a successful year, and the favorable balance went up to $5,760,000, and in 1903 to $7,123,044. But page 20 of the Superintendent's report shows that the English companies lost $4,538,000 by the Toronto conflagration of April last, which, added to the other losses already incurred or to be expected during 1904 will again leave the British companies in all probability with an unfavorable balance in respect of their Canadian business. A like condition is to be predicated of the American companies, which lost $1,320,000 by the Toronto fire.

⁂

BANK STATEMENT.

We present below a condensation of the monthly statement of Canadian banks for September, 1904. It is compared with the Bank Statement for the previous month, and shows capital, reserve, assets and liabilities, average holdings of specie and Dominion notes, etc.:

Canadian Bank Statement.

LIABILITIES.	Sept. 1904.	Aug. 1904.

Loans to directors or their firms	10,087,846	10,098,809

September is one of the months in which we expect to see bank circulation advance because of the beginning of active movement of the crops. This advance is not very marked this year, being about $3,500,000, which is nearly the same amount as in September last year. In 1902, however, the increase of circulation during September was $5,930,000, and in 1901 it was $4,675,000. The smaller advance this year cannot be because the results of the crops were less remunerative; it is elsewhere shown that the increased price of wheat this year compared with last has made up for any variation in quality. There are probably reasons for a smaller forward grain movement.

Although the deposits of the public at notice show a slight decline from August to September, the total public deposits are higher by eight millions. In Canada the aggregate is nearly four millions greater, and in other countries—the United States and Great Britain—they are more than four millions. The total deposits in Canadian banks are now $476,421,000; and if to these we add the deposits in the mortgage loan companies, estimated at $20,000,000, the Government and other savings banks, $85,723,000, we have the total of $582,144,794 shown in our smaller table below. This is a growth in the tabulated deposits of the people of more than $40,000,000 in twelve months. Much use, and not always a sensible use, is being made of statistics of Canada in the present excited time of our election contest; it is very likely that some use will be made of these. But neither political party can justly claim to have brought Canada's savings up from $259,878,000 ten years ago to $582,000,000 now, a greater relative progress in this direction than any other people, we believe, can show. It is not the politicians who have taught our people industry and thrift—we possessed these qualities already. Whether our prosperity be born of protection, or of freer and more intelligent trade in some directions, we have put aside, as a people, in a safe form, of late years, a larger proportion of our profits than other prosperous communities.

ABSTRACT OF BANK RETURNS.

Description.	Sept. 30, 1904.	Sept 30, 1903.	In. Month 1904.

Gold held, $34,476,000, or 74 per cent.

COUNTERFEIT LIFE ASSURANCE.

A Fourteen Years' Record.

Second Article.

We resume publication of the list of assessment life assurance societies begun in last issue, and present below statistics concerning sixteen more societies, making thirty-five in all. These tables will show still further how the cost of insurance in these organizations commonly increases with their age, and how generally the flight of years brings with this a decrease in their membership. It is to be borne in mind that in these tables $4 is added to the "net cost per $1,000" of each society to represent the average expenses. Some spend more and some less:

Name and Date of Origin.	Year of Record	No. of Members.	Cost per $1,000	Year of Record	No. of Members.	Cost per $1,000
(20) Knights and Ladies of Honor, Indianapolis, Indiana, 1877.	1890	59,880	$16 78	1897	66,437	$17 90
	1891	61,991	17 13	1898	64,300	19 00

	1895	23,026	10 80	1902	176,028	11 90
	1896	50,110	10 80	1903	207,176	11 30

Looking back over the foregoing thirty-five records, it will be seen that fifteen of the societies have made a slight increase in membership during the year, and that nineteen have only scored a decrease. But as to death claims, these have been heavier in twenty-three cases and a little lighter in only eleven than during the previous year.

The New York Spectator, which is a very reliable insurance journal, in a recent issue, also gave the

records for the past year of thirty-five assessment societies, most of them those found in the foregoing fourteen-year tables. The death-claims paid by the thirty-five amounted to ....$ 50,161,968
The cash assets in hand are only.......$ 28,715,133
The membership numbers a total of.... 3,524,120
The certificates in force represent..... $5,220,067,819

From the foregoing it would appear that in spite of the efforts of the I.O.F., the Maccabees, the Modern Woodmen, the A.O.U.W., and others to accumulate a large surplus their success has been very poor on that line. Only $28,715,133 for thirty-five societies—just about enough to keep the wolf from the door for the short space of six months—the death claims last year having been, as above shown, $50,161,968. They having only a trifle over five dollars in hand on the average for each thousand dollars at risk.

The five oldest large societies are the American Legion of Honor, the Knights of Honor, the A.O.U.W., the Royal Arcanum and the Maccabees. Of these, the first named is about on its last legs with only 4,049 members where it once had 62,154. The next has only 51,606 where it once had, fourteen years ago, 135,213. The Royal Arcanum and the Maccabees have both recently made a fair increase in membership; but their increasing death claims have been giving their leaders great anxiety for several years past. The one has assets accumulated of $2,669,900, being about $4 for each $1,000 at risk, and the other $3,211,145, or about $7.50 per $1,000. Our own Toronto Independent Order of Foresters compares favorably with those two societies in closing last year with $6,935,133 of assets, which is nearly $30 per $1,000. But, as an offset, it should be said that the I.O.F. will soon be losing all revenue from its increasing 70-year old members, while the other societies can make as heavy calls as they please upon their aged friends, so long as they keep their certificates in force. And no doubt there are many, in all three companies, above seventy, or rapidly getting there.

The blue books of the past three years reveal a peculiarity in the I.O. Foresters' death claims. The business is stated in the tables in two sections thus: "In Canada," and "In other countries." The business in Canada is now getting up in years, while that from other countries is much newer. Hence, the death claims are beginning to count up heavily in the case of the home section, while remaining light on the outside field. The following statement shows the business in force at the close of the preceding year and the death claims in 1901, 1902-3, in the two sections, as an average:

	In force.	Deaths.
Average of 3 years in Canada.	$ 82,811,333	$705,675
Average of 3 years in other countries	133,002,333	915,180

The deaths per million dollars at risk in the home section were, therefore, $84,200, and for other countries only $63,300. If there had been the same amount in force in Canada as abroad, the above table would read this way:

	In force.	Deaths.
Amount in Canada, say...	$133,002,000	$1,129,800
Amount in other countries.	133,002,000	915,180
Greater mortality on Canadian members..		$214,620

This state of things would seem to call for a larger surplus fund being held and set apart for the Canadian members out of current income. Also, it emphasizes the need of a much larger provision for future heavy calls than any assessment society has yet attempted to make. The I.O.F.'s Chief Ranger calls their fund a "surplus," but that is clearly an error. Liabilities have to be deducted before a surplus can be found.

We have just learned that H. A. Wyman, of Boston, Mass., has been appointed as receiver of the assets of the American Legion of Honor. He says there are only 3,500 members, and the unpaid death claims numbered 126, and amounted to $223,000. There will be about $100,000 cash left to divide among the living holders of certificates for between four and five millions of dollars. When in operation the Legion claimed to have good assets of $422,357 per last report to December 31st, 1903. In 1898 the assets in hand were $838,778. Seven other smaller assessment societies have become insolvent in Massachusetts within about a year past. And thus they go.

* * *

SPECULATION AND GOOD TIMES.

Last week we expressed the opinion that there was but little foundation for the exaggerated talk concerning an approaching period of hard times for this country and the United States. That this opinion was well based, there is accumulating evidence to show. The stock market, for one, is a fairly good gauge of commercial prosperity, if due allowance be made for its tendency to get a little too far ahead of the game. And the stock markets, both in Canada and in New York, have been for some weeks past steadily regaining the tone of confidence which was lost in the great reaction of a year or so ago. So far there has been no great upheaval carrying everything before it, though last week has brought a condition in New York not far removed from that, but rather a slowly augmenting upward trend in prices. To such an extent, however, has this movement gone, that already certain stocks are very little behind the high-water mark of last year. Without wishing to be alarmist in the faintest degree, we would ask the question: is this marked advance fully warranted by circumstances? We are not now condemning the buying and selling of stocks; all we would suggest is that it be kept within due bounds: the usual alternation of feverish activity with utter deadness is good for no branch of the community whatever. As a general rule, the monitors of opinion wait until the crash has come and then calmly criticize the lack of judgment shown by the speculative public for speculating so feverishly. And this surely is what is happening now—the outside public is being drawn into the ring, and as usual is entering it just when prices have become so high that they ought to keep out. An apt illustration of this tendency is offered in New York by the fact that the same people who a few months ago could not be induced to buy United States Steel at 55 upon any consideration whatever are now scrambling over one another to get it at 82 and more. If there be any right time for the utterance of a word of warning, it should surely be at the beginning of a period of inflation, before speculators have been irrevocably caught in the net, not at its end when the damage has been done. Perhaps the present upward movement is legitimate, and perhaps last year's slump was unwarranted; at least a reaction is by no means unlikely; and it can do no harm to the vast army of people who now consider themselves financiers on the strength of a few splashes in risky waters, to give them a word of warning, to look very carefully at what they are leaping on. The course of a bull movement in stocks may be likened to the ripening of a fruit; no sooner has full maturity been reached than there sets in at that instant the process of decay.

* * *

CROPS IN MANITOBA AND THE NORTH-WEST TERRITORIES.

The following, from a thoroughly well-informed source, is an interesting statement. It gives the actual figures, quantity, grade, and value of the wheat crop in Manitoba and the North-West Territories for the years 1902 and 1903, and the estimated figures of the crop of 1904. The figures for 1904, we may explain, have been compiled from information received from about seven hundred correspondents throughout Manitoba and the Territories, and can be regarded as fairly reliable. They indicate a higher total yield than we at first anticipated, but the cash result practically agrees with our original estimate. We yet think the total yield of bushels somewhat over the mark, but the rate, 80c. per bushel in the statement, is fully five cents per bushel under the present market value. Although the price for high grade wheat may fall to eighty cents or thereabouts at the close of navigation, we feel confident that the net result per bushel to the farmer will be higher than eighty cents. In addition to the money value of the wheat crop, consideration must be taken also of the money value of the oat, barley and flax crop; also cattle. We believe these will represent to the farmer nearly another ten million dollars this year.

Manitoba and the North-West Territories.

Wheat Crop—Actual 1902 and 1903; Estimated 1904:
Winnipeg, 21st October, 1904.

1902 Crop.

Wheat inspected at Winnipeg:—

		Bushels.
No. 1 hard		21,757,000
No. 1 Northern		14,432,000
No. 2 Northern		6,378,000
Other grades		9,266,000
Wheat used by country mills	6,000,000	
Wheat used for seed	6,000,000	
		12,000,000
Total		63,833,000
Average price to farmer, 55 cents		$35,108,150

1903 Crop.

Wheat inspected:—

		Bushels.
No. 1 hard		557,000
No. 1 Northern		7,065,000
No. 2 Northern		10,794,000
No. 3 Northern		11,720,000
Other grades		8,337,000
Wheat used by country mills	6,500,000	
Wheat used for seed	6,500,000	
		13,000,000
Total		51,473,000
Average price to farmer 65 cents		$33,457,450

1904 Crop.

		Bushels.
Estimated crop		60,000,000
Required for country mills	7,000,000	
*Required for seed	9,000,000	
		16,000,000
Balance for shipment		44,000,000
No. 4 grade and under		14,000,000
High grades		30,000,000
High grades, 30,000,000 at 80 cents to farmer		$24,000,000
Low grades, 14,000,000 at 50 cents to farmer		7,000,000
Required by country mills, 7,000,000 at 80c. to farmer		5,600,000
*Required for seed, 9,000,000 at 80 cents		7,200,000
		$43,800,000

Re Grading:—

No. 1 hard was not an official grading in the year 1903, nor is it in 1904. The apparent discrepancy, therefore, in the large amount of No. 1 hard in 1902, as against 1903, is accounted for in this way. No. 1 Northern, No. 2 Northern, and No. 3 Northern of the 1903 crop were no doubt as good a quality of wheat as the No. 1 hard, No. 1 Northern, and No. 2 Northern of the 1902 crop.

* * *

FIRE INSURANCE MEMORANDA.

The town council of Lunenburg, Nova Scotia, has awarded a contract for the installation of a Norton fire alarm system in that town.

The present week witnesses the annual meeting of the National Association of Local Fire Insurance Agents. St. Louis is the place of meeting. F. F. Holmes is secretary.

The superintendent of the Boston Protective Department, Mr. G. Abbott, Jr., gives the causes of fires in May, June, and July of the present year. They were 294 in number. Matches caused the most, namely, 71 fires; sparks, 26; fireworks, 21; chimney fires and coal oil lamps, 17 each; smoking, 19; bonfires, 11; coal oil stoves, 11; spontaneous combustion, 8, and gas jets, a round dozen.

We are advised by the Equity Fire Insurance Company, of Toronto, that Mr. H. R. VanNorman has resigned his position as underwriting secretary and general agent at the head office of that company, and that Mr. A. B. Powell has accepted the chief office position on the Equity's staff. Mr. VanNorman, who is described as a young man of unusual promise, intends to try his fortunes in the great insurance centre, New York. Mr. Powell has had long experience in business and insurance, and has done hard and honest work for several years as manager of the Ottawa Fire Insurance Co., from which position he recently resigned.

Eighteen months' experience as proprietors of a fire insurance company was quite enough for Hannah & Hogg, the well-known liquor dealers of Chicago. That firm, who owned most of the stock of the Scottish National Insurance Company of Chicago, a few days ago reinsured its business in the Insurance Company of the State of Illinois. The Scottish National Company began business in April, 1903, with a capital of $100,000 and a surplus of $50,000, and did business in half a dozen western States, besides writing surplus lines in the east. The managers of the company were Newburger & Co., who have now been given an agency for the State of Illinois. The reason assigned for the reinsurance was that there wasn't enough profit in the business. The company had a premium income of about $30,000.

Again firemen's lives are sacrificed because of deadly acid fumes. This time in Denver, where, a few days ago, several firemen lost their lives because they were exposed to nitric acid fumes. A carboy containing sixteen gallons of the acid was

---

*A very liberal estimate. Probably 1,500,000 bushels over-estimated.

broken in a newspaper etching plant. The fire department was called and the firemen entered the room, breathed the fumes and did not realize their danger until it was too late, in the case of several, to save their lives. The much similar case in Milwaukee and the possibility of a repetition in any city demand some safeguarding of the lives of firemen from this danger. Placards should be posted where dangerous chemicals are stored, firemen should become acquainted with these locations and should be instructed as to the peril to which they may become exposed.—Rough Notes.

* * *

LIFE ASSURANCE MEMORANDA.

At the 1904 outing of the officers and field staff of the Sun Life of Canada, held at Ste. Anne de Bellevue, Quebec, some sensible things, as well as some bright things, were said by the speakers. For instance, this from Mr. F. G. Cope, Superintendent of Agencies: "The outing is not merely for pleasure; there is a business end to it. We want the man who is doing well to try and do better, and those who are not doing as well as they should to measure up to their opportunities." From Mr. F. G. Rankin: "I don't like that word 'agent' as applied to life assurance men. We are more than agents; we are representatives. When I used to sell books, I never allowed myself to be termed a book agent, I was a missionary of culture."

The fifteenth annual convention of the National Association of Life Underwriters opened at Indianapolis, Indiana, on 12th October, when about 250 delegates and alternates were present. President H. H. Ward reviewed the work of the year; acknowledged the work of the association and his obligations to the Executive Committee and other officers, particularly to Vice-President Danford M. Baker. The winner of the Calef Loving Cup was J. H. Jeffries, assistant manager of agencies, Penn Mutual Life, and the cup was presented to him by Col. T. H. Bowles, of Detroit. The Ben Williams Vase was won by J. A. Jackson, of the Mutual Life, and presented to him by Major F. A. Kendall, of Cleveland. Officers were elected as follows: President, John Dolph, Metropolitan Life, Cincinnati; first vice-president, Percy V. Baldwin, Washington Life, Boston; second vice-president, William Van Sickle, Home Life, Detroit; third vice-president, C. C. Courtney, of Kansas City; secretary, E. J. Clark, John Hancock Life, Baltimore; treasurer, Eli D. Weeks, Phœnix Mutual Life, Hartford. Next year's meeting is to be held at Hartford, Conn., some time in September.

* * *

ANSWERS TO ENQUIRERS.

Marine, Guelph.—The Toledo Fire and Marine Insurance Co., of Sandusky, Ohio, is said to be doing quite a lumber insurance business in Canada. To my own knowledge, the management accepts lines of $25,000 on lumber. Do you know anything of it, or can you learn anything of it, and has it capital entitling it to so much confidence? [The company in question has no legal status in Canada. Its capital is $100,000 and its total ledger assets $134,047 at the end of December, 1903. The par value of its stock in directors' hands is given at $52,700. No sensible Canadian would take its policy for $25,000. Ed. M. T.]

* * *

BANKING AND FINANCIAL.

The Trinidad Electric Company has declared a quarterly dividend at the rate of 5 per cent. per annum.

In the opinion of the Commercial, whose suggestions as to openings for merchants at certain points in Manitoba and the North-West we quote elsewhere, there is room for bank agencies at Abernethy, Assa.; Penhold, Alta.; Belmont, Man. These, of course, would be in addition to the 216 bank branches, private or chartered, which are given by Dun's book as scattered over Manitoba and the Territories.

At West Shefford, Que., on Saturday last, the branch of the Eastern Townships Bank was robbed of $7,000, that sum being taken from the safe, which was wrecked. Investigation on Sunday and Monday by Mr. Neil Dinning, of the inspecting staff, discloses some circumstances that may afford a clue to the robbers. He learned that two rigs containing five men had been early Saturday morning driving quickly towards Richford, on the Vermont boundary, and silver coin has been found scattered along that road. The blankets used by the burglars to deaden the sound of the explosion of the safe, have been identified as belonging to a farmer on the road between Granby and West Shefford, so that it is inferred that the burglars came from this direction. The work was that of experts, and, according to a competent safe manufacturer, who was on the scene on Saturday, it would not have taken more than five minutes to get off with the booty. The police authorities of Bedford district, assisted by detectives from Montreal, are hard at work on the case. The bank has offered a reward of $2,000 to anyone who will give information that will lead to the arrest of the whole or part of the gang, presumably three or four in number.

* * *

—Great wars have sprung from less provocation than that given last Friday night to Great Britain by the Baltic fleet of Russia, en route to the China Sea, firing upon English fishing boats in the North Sea, killing two men and wounding others. It is alleged by Admiral Rogestvenski that he supposed himself surrounded by Japanese torpedo boats, who fired upon his war vessels. If the officers of the Baltic fleet were not drunk they were crazed with fright to make such a mistake. Even now that a demand has been made by Britain for apology and compensation for this outrage, the Russians "decline to punish their officers at the request of any foreign power." They may have to. Britain has some rights, to be respected, and she has a navy.

* * *

—The investigators into the comparative nutrition values of food stuffs, who have been carrying on their work in Washington, D.C., have come to the conclusion, which will surprise most, that weight for weight, white bread is more nutritious than wholemeal bread. It is true that chemical analysis shows that the bran which is removed does contain nitrogenous material, and also phosphates. This is where the brown bread enthusiasts stop, somewhat naturally concluding that when the miller takes out the bran he removes the most valuable part of the flour. Laboratory analysis is not the same as that made by the human body, and it is proved conclusively that the digestive apparatus of a man has not the power to utilize the bran at all; consequently, when he eats the meal from the whole wheat all the bran ingredients are rejected. Cattle and sheep, however can digest this branny material, so the miller is quite right in selling it for stock and reserving only the white portion for bread for man. The experiments seem to prove beyond doubt that the nitrogenous ingredients of the bran escape digestion entirely, and that one pound of pure white flour provides more digestible material than the same amount of whole meal.

OUR HALIFAX LETTER.

The recently appointed mining committee of the Halifax Board of Trade has decided to undertake an investigation of the mining resources of Nova Scotia from a commercial standpoint. The first move will be to collect detailed information regarding the iron ore deposits of the province, as iron is the basis of a great many valuable industries which it is desirable to have established in this province in addition to those already in existence. The information will be for general public use, and should prove very valuable.

This city has lately lost a number of its prominent business men by death. It is not long since the death was chronicled of Mr. John F. Stairs, who was at the head of many industrial and financial corporations. In the last fortnight Mr. Alfred Putnam and Mr. Michael Murphy have passed away. Mr. Putnam was chiefly interested in shipbuilding, but was also engaged in other enterprises, being president of Hants County Marine Insurance Co., the Maitland Insurance Co., and the Acadia Loan Corporation. He was a director of the Nova Scotia Fire Insurance Co., the Union Life Assurance Co., and the Midland Railway Company. He represented Hants County in the Dominion Parliament for two terms. Mr. Michael Murphy was the surviving partner in the wholesale dry goods house of J. and M. Murphy, his brother John having died about a year ago. The business is being continued by the sons of the deceased.

The Good Roads Movement in Nova Scotia has received a set-back by the resignation of the Government Instructor, Mr. C. R. Coutlee, who has been appointed engineer for the Montreal district on the Georgian Bay survey. Mr. Coutlee was only appointed instructor a few months ago, and had done nothing but examine the roads in the different parts of the province, and make himself acquainted with local conditions. The local government will appoint a successor as soon as a properly qualified person can be found.

Business men are much pleased with the reduction in the cable rates between Prince Edward Island and the mainland, which went into effect last week. Instead of fifty cents for ten words, and three cents for each additional word, the rate is now thirty cents for ten words, and two cents for each additional word. This rate applies to both day and night messages for offices of the Anglo-American Telegraph Co.

The Bank of Nova Scotia in this city is having a new safe constructed at a cost of several thousand dollars. I learn that the employees of this bank under 21 years of age have been notified that they will be discharged if discovered using tobacco in any form. The rule applies not only to office hours, but is supposed to be adhered to at all times. This is an unusual rule, but a good many people believe it to be as good as it is novel.

The assignment of Mr. E. F. Smith, stock-broker, took everyone by surprise. Mr. Smith left the city presumably for a trip to Montreal, and a few days later the proper official received the assignment, post-marked Philadelphia. Mr. Smith had a high reputation in the city. He went into the stock business about three years ago, and previous to that held an important position in the Royal Bank. Mr. Smith became involved through a "slump" in the securities he was carrying.

Halifax, Nova Scotia, 24th October.

BANKING AND FINANCIAL.

The Standard Bank of Canada has opened a branch at Blenheim, Ont., with Mr. E. L. Williams in charge, as manager.

A man who was well known in Brantford as a respected and public-spirited citizen, and known, too, in financial circles outside, Mr. R. S. Schell, died on Friday last. He had been manager of the Royal Loan and Savings Company for twenty-eight years, having previously been manager of the gas works. He was for several years a member of the Collegiate Institute Board, occupying the position of chairman at the time of his death, and was on the Free Library Board also. Mr. Schell was sixty-four years of age. He will be much missed in Brantford.

The Canadian Bank of Commerce has added another branch to its already long list in Canada. The latest branch to be opened is at Nanton, Alberta.

A Maritime Province exchange tells us that the Bank of New Brunswick is opening a branch on the island of Grand Manan, an island belonging to New Brunswick, situate off the northeast coast of Maine.

We are informed that Mr. George Carruthers, who has been seven years manager of the Merchants Bank of Canada branch in Sherbrooke, has been appointed manager of the same bank at Ingersoll, Ont. He is to be succeeded in Sherbrooke by Mr. J. C. Fawcett, manager at Walkerton, Ont.

The New York Times has a good story of a well-known contractor in Chicago, named Coleseed, who had always been very active with all sorts of schemes. Although his means were not large, he had managed to keep his head above water through the aid of pretty nearly all the banks. His wife was discussing with him the sudden death of Herman Butler, and said: "Mrs. Butler told me that her husband selected his pall-bearers before he died. I think it was so nice of him, my dear; if you were taken before me, who would you like to have act as pall-bearers?" Coleseed thought a moment and then said. "Well, dear, ask the presidents of the eight leading banks of Chicago. They have carried me all my life."

United States bank statements show a remarkable increase in business and assets, compared with a year ago, but the conclusion is drawn from the figures presented that this growth has been largely confined to the great cities. For example, five large national banks in New York City increased their assets in the year by 54.6 per cent.; the national banks in the central reserve cities increased their assets by 21.6 per cent.; the national banks in other reserve cities increased their assets 8.6 per cent., while the country banks at large show an increase in assets of only 5.3 per cent. This seems a peculiar condition of things in view of the development which has been going on throughout the whole country at large; it would appear to indicate, too, a certain amount of over-concentration, which can hardly be to its best interests.

One occasionally hears the expression, "So-and-So is having a good time with his money while at lasts," applied to those who have secured ill-gotten gain, or who have got ahead for a while in some speculative stock deal. But if the man who has robbed a bank, for instance, sets about to enjoy himself with the proceeds, what with apprehension as to the future and the reproaches of conscience (supposing him to have a working conscience) he does *not* have a good time. J. F. Drummond, an employee of the Manitoba Mortgage and Investment Co., who was accused of embezzling $5,480 from his employers, and who was brought back last Friday to Winnipeg from Liverpool, pleaded guilty, and was remanded for sentence. Drummond was accountant, and appropriated large sums of money, which he spent in fast living. If he has not learned it already, he is probably now about to learn that the way of transgressors is hard.

Outrages in lonely places, whether taking the shape of stopping and rifling railway trains or robbing men riding or driving, ought to warn railways and banks to take some more effective measures to protect their men. The latest instance of bold and successful highwaymanship comes from Manitoba, where on Monday last the staff of the Bank of Hamilton branch at Plum Coulee, a sub-branch, were returning, presumably driving, to Winkler branch after the day's business was over, were "held up" by masked men, and at the points of revolvers made to give up the satchel containing the bank funds, some $2,000. Having secured the booty the robbers escaped in a southerly direction towards the United States boundary, some fifteen miles away. It appears that the branch at Plum Coulee is kept open three days of the week, and at Winkler on alternate days, and the bank staff were just returning to Winkler after the day's business at Plum Coulee. Those in the party were E. V. Wahn, manager; M. H. Kennedy, accountant, and J. Wakenstein, junior clerk. The robbers had some chivalrous consideration, however, for while they held on to the money, all the promissory notes and papers taken from the bank were found, on the next morning, at the door of the bank's branch at Plum Coulée.

INSURANCE INSTITUTE OF MONTREAL.

The Montreal Insurance Institute "means business," as the phrase goes. At any rate its committee has chosen a series of very practical subjects to be read and discussed this winter. The syllabus shows that the papers to be read before that body during the session 1904-5 include "Specific Rating," by Mr. J. B. Laidlaw, of Toronto; "Government Returns, and How to Prepare Them," Mr. A. K. Blackader, of the Department of Insurance, Ottawa: "A Talk on the Specialized Mortality Experience of Thirty-four Canadian and American Life Companies," Mr. T. B. Macaulay; "The Sawmill Hazard," Mr. Peter Clinch, secretary of the New Brunswick Board of Fire Underwriters; "Taxation," Prof. A. W. Flux, of McGill University; "Medical Selection of Lives," Dr. E. M. Von Eberts, and "The Legal Aspect of Insurance," Mr. R. C. Smith, K.C.

A feature of the opening session was the address given by Mr. Peterson, Principal of McGill University. His subject was "Education in the Schools." His conviction was that the prime interest of the situation was not the establishment of special classes, but an improvement of the ordinary education going on in our schools. He believed that for nine pupils out of ten the proper business of the schools was to train in a general way the faculties of the scholars, rather than seek to prepare them for special callings in life. Several American colleges, he said, and Birmingham and Manchester, were giving attention to commercial subjects. They were making special provision for the large body of young men who would be likely to take a higher education if emphasis were laid on the subject in which they were interested and had to do with their future career. Such institutions recognized the fact that if a liberal education was to be generally diffused, it must be given in new ways, otherwise a large class would be shut out of it.

* * *

PRICES OF COMMODITIES.

The London Economist's Index Number, showing the average price of a number of selected commodities, now stands at 2,148, as compared with 2,130 three months ago, or an advance of 0.8 per cent. A year ago it stood at 2,114, at the end of September, 1902, at 2,002, while the highest point was reached at the end of April in the present year, when it stood at 2,239. As may be noted from the above-named comparison of the last three months, no very marked change has taken place in any of the principal commodities. Cotton has shown more fluctuations than anything else, but even these have been mild when compared with a few months back. Cotton is slightly lower than at the end of June last, while metals, except iron and steel, have gone up. Sugar is higher. Wool has been very firm, higher prices having been secured at the last sales in London than at any previous sales this year. On the other hand, flax, silk, hemp and jute are all lower than three months ago. Meat has risen slightly and will probably continue on the upward course until after the cessation of the Christmas demand. Wheat (English) has advanced 3s. 6d. per quarter on the strength of reports from America, though these are discounted somewhat owing to the tendency on this side to excitement and speculative manipulation. Tea keeps low. Petroleum has advanced and so has tallow.

* * *

—The Canadian Pacific Railway Land Department last month disposed of 13,110 acres of land in Manitoba and the North-West Territories, the price realized being $61,962. For the nine months of the present year already expired, the figures were 431,282 acres sold, for $1,879,841.

* * *

—On Friday last, the night shift in the machine shops of the Dominion Iron and Steel Company, at Glace Bay, quit work, because the superintendent persisted in the employment of unskilled labor to operate machines that required skilled mechanics or apprentices. The difficulty, however, was settled within two or three days, the management agreeing to employ unskilled labor in the machine shops as helpers only.

In accordance with an amendment to the Bank Act, passed at the session of Parliament, the Union Bank of Halifax is preparing to circulate its own notes in Trinidad. The present notes in circulation in the island do not represent the same value as those of this country.

* * *

—The United States Steel Corporation is about to make another offer to its employees to take up shares of stock. In January, 1903, $2,000,000 worth was thus offered at $82.50 per share, and it was guaranteed to draw a 7 per cent. dividend and a bonus, provided the employee should hold it for five years. In December last year another offer was made, similar to the first, except that the price was $55, the value of the stock having depreciated. This has now gone up again, however, and it is understood the basis of the new offer will be at about $80 per share. One wonders how far such offers as these are dictated by altruism and how far by "enlightened selfishness."

* * *

—News comes from Victoria, B.C., that at a meeting on Friday last, Hon. Senator Templeman explained his action in withdrawing his amendment to the Grand Trunk Pacific bill in the Senate, calling for construction to commence at the Pacific end within two years, to have been because of the following assurance from Mr. Hays: "Surveys have not yet reached that stage of completeness to enable me to affix any regard to the western end, there are many things to consider, including the important question of harbor facilities, and the nature of the country through which the road must run. I may say, however, that it will be the policy of the company to definite time for commencement at either end of the road. With diligently prosecute to completion the surveys which have been in operation for over a year, and, so soon as the progress of the surveys in British Columbia will permit, construction will be commenced from the Pacific Coast end of the road, and be carried continuously in an easterly direction until the road is completed. In fact, such action will be necessary to complete the road within the time limit."

* * *

—Those among us who saw and heard the Archbishop of Canterbury while on a visit to Canada must have been impressed with the sincerity of the man. He had a sane way of judging things, and a clear way of expressing himself. And the people who met or heard him in the United States were struck by the friendly frankness, the absence of pomp in his demeanor. Some words in one of his American addresses remind us of his letter to the Vicar of Margate, lately published. "I am firmly persuaded," wrote His Grace, "that if our political life is to be maintained at its higher level and our public men are to justify the confidence we have been accustomed to place in them, electors must see to it that no political or partisan enthusiasm leads them to record votes for men whom they do not trust or respect." Such words are of great value, and they ought to be pondered by many in the United States and Canada where dignity of the franchise has so much fallen into disrespect. The Archbishop evidently sees the danger to the body politic that lurks in the venal vote, the ignorant vote, or even the careless vote.

The Electrical Development
COMPANY OF ONTARIO, LTD.

WE CAN OFFER AT PRESENT A BLOCK OF THESE FIVE PER CENT. BONDS AT VERY ATTRACTIVE PRICES WITH A **STOCK BONUS.** THIS IS WORTH LOOKING INTO AT ONCE. . . . . . .

BANKERS

MONTREAL—Molsons Bank; Imperial Bank of Canada.
NEW YORK—The Importers and Traders National Bank
LONDON ENGLAND—The National Bank of Scotland.

A COLOSSAL INDUSTRIAL ENTERPRISE.

The illustration we present to-day shows the portal end of the waste water tunnel of the Electrical Development Company, which is to extend from the power house to the verge of Niagara Falls. This tunnel is at present semi-circular in shape, but when completed will be horseshoe shape some 26 feet in diameter. Its level is 158 feet below the river bed, and a shaft sunk close to the edge of the Falls gives access to it. The timbering of the roof, as may be seen, is regular and very heavy. The boarding of the remote portion, which may be seen in the distance, was found necessary because of the heavy spray encountered by the contractors who had previously been dumping the excavated rock behind the Canadian Falls. This tunnel when complete will be 1,935 feet long. It has already been excavated, in its semi-circular form, for the full length. At this great depth of 158 feet, we are told, the stillness is intense, until broken by the noises of the men, mules, and drills used in the work of excavating.

Flash Light Photograph of the Tunnel under Niagara River. The end is boarded up to keep out the spray from the Falls, which hindered the workmen.

—Lloyds has just issued a summary of vessels of all nations which have been condemned or totally lost during the past year. The table shows that 237 steamers of 298,376 gross tons were foundered, wrecked or lost during the year. To this wastage is to be added 498 sailing vessels of 259,004 tons. Of these losses, naturally Great Britain, owing to the preponderance of her tonnage, is the greatest sufferer. She lost 155 vessels of 193,200 tons. The British colonies lost forty-one vessels of 18,192 tons. Norway comes next with a wastage of 125 vessels of 86,736 tons. The United States comes third with a wastage of 100 vessels of 66,797 tons, exclusive of the losses on the Great Lakes. Others were as follows: Austria-Hungary, eight vessels of 14,544 tons; Denmark, nineteen vessels of 7,415 tons; Holland, thirteen vessels of 9,054 tons; France, thirty-six vessels of 34,779 tons; Germany, thirty-nine vessels of 32,520 tons; Italy, twenty-seven vessels of 16,412 tons; Russia, twenty-two vessels of 8,312 tons; Spain, eleven vessels of 9,349 tons; Sweden, sixty-six vessels of 27,437 tons.

Mercantile Summary.

Murdock McKenzie, of the long established firm of M. McKenzie & Co., Montreal, died last week aged 85 years.

Jules Miller, of Quebec, engaged in a grocery business since last spring, under the style of Miller & Gagnon, has assigned. His liabilities are almost altogether local.

The town of Palmerston carried by-laws on Tuesday last, by large majorities, for money to extend the municipal electric light plant and to furnish the public library building throughout.

There is a lack of dwellings in Berlin for the growing population. The Oelschlager property on Yonge street has been sold to a building syndicate in London, Ont., which will erect twenty tenement houses on the property.

Two thousand dollars has been placed in the estimates for the interior refitting of Sherbrooke post office. Chief among the changes will be an equipment of new and modern lock-boxes in place of the old-fashioned ones now in use, while the general delivery wicket will be enlarged.

The will of the late Alexander Lumsden, ex-M.L.A., lumberman and steamboat owner, etc., has been proved. The total value of the estate is placed at $935,042. It is made up as follows: Ontario real estate, $41,175; personal estate, $484,919.44; Quebec estate, $408,948.26.

The Montreal firm of Bellhouse, Dillon & Co., doing a very extensive import business in cements, heavy chemicals, dyestuffs, etc., who recently became involved through heavy losses in asphalt paving contracts, etc., are reported to be making an offer of compromise at the rate of 25 cents on the dollar.

Dame Alexina Drolet, doing business at Montreal in the general hardware line, under the style of Desforges & Co., has assigned. She is the wife of Joseph Desforges, who failed just two years ago, owing some $23,000, and who has recently made use of her name.

Mr. Norman W. Bethune, who for the past fifty years has been manager at Ottawa of the Great North-Western and Montreal Telegraph Companies, and who has just retired from the position, was on Friday last presented by the citizens of Ottawa with a congratulatory address and a handsome cabinet of silver. The presentation was made by Sir Sandford Fleming, on behalf of the subscribers. Mr. Bethune made an appropriate reply.

A grocer in Montreal named C. Spector has made assignment of his estate, showing assets of some $2,000, and liabilities of about $3.500. He was also interested in a branch business at Brandon, Man., which he is said to have lately sold out to a brother.——Joseph Vernier, for five years doing a grocery business in Point St. Charles suburbs, Montreal, and previously a Grand Trunk brakesman, has become insolvent.——C. Sauve, dry goods, Montreal, lately noted by us as having assigned, is making an offer at the rate of 60 cents on the dollar.

CANADA PERMANENT

MORTGAGE CORPORATION,

Toronto Street, Toronto.

Receives Deposits and Pays Interest at - - 3½% per annum Compounded Twice each Year.

Absolute Safety is Assured by

Paid-up Capital	$6,000,000.00
Reserve Fund	$1,750,000.00
Invested Funds	$23,300,000.00

THE haste to get rich often leads many a person who has money to invest to speculate in bonds and stocks ground out by speculators during good times when everything is on the boom, and which, when times are hard and the investor is most likely to need his money, must be sold at a great loss. We would advise you not to speculate with this class of stock, but to invest your money in the Debentures of The Standard Loan Company, which bear interest at the rate of five per cent. per annum, payable half yearly; interest coupons are attached to debenture made payable to bearer. 8

—A certain M.P., who is in the habit of buying a paper from the same newspaper boy every evening, on his way to the House of Commons, chanced one evening when he came to put his hand into his pocket to find he had come out without a single penny. He hesitated a moment, and then explained the position to the lad. "Don't mind about that, sir," was the reply, "you can pay for it to-morrow. It will be all right." "And to-morrow, my boy, I may be dead," said the politician, with the idea of impressing a moral lesson upon the youthful mind. The answer of the lad left the moralizing legislator gasping. "Well, sir, if that is the case, it will be no great loss, after all."

Mercantile Summary

Hamilton, Ont., council has decided to submit a by-law to the ratepayers to raise $50,000 for an extension to the City Hospital.

An assignment has been made by Mrs. Israel Zunar, dealing in boots and shoes, in Ottawa. In connection with this matter a charge has been laid against her husband of having recently transferred the business to his wife with fraudulent intent.

It is stated in a cable message of Wednesday that the Liverpool Chamber of Commerce has decided to forward a protest against the recent Dominion bill imposing a special duty on goods dumped into Canada, whether from Britain or elsewhere.

The F. Williams Company's wholesale cigar warehouse, at Morrisburg, Ont., with a stock worth $10,000, was totally destroyed by fire on the 22nd October. Insurance about half. On the same date, another fire took place in Rat Portage, N. Brunsell's boathouse, together with several gasoline launches, sail boats, etc., being destroyed. The loss is estimated at $7,000.

The Carney Lumber Company, of Massey, Ont., and also of Wisconsin, will erect a large two-band sawmill at Owen Sound, with a yearly capacity of 20,000,000 feet. The ratepayers will shortly vote on a by-law granting exemption from taxation for ten years, and the city has sold the company a site on the bay shore.

A fire broke out the other day in the main building of the Owen Sound municipal plant. Luckily, however, it was put out before it had reached the new generators recently put in at a cost of $15,000, and not very much damage was done.

Upon demand, an assignment has been made by Andrew Laing and L. E. Gingras, doing business at Montreal as the Laing Canning and Preserving Co. They did a business in the making of cheap preserves, and a large quantity of rotten figs were lately seized upon their premises by the health officers. This concern must not be confounded with the Laing Packing and Provision Co., Limited, a very extensive concern of altogether different stamp, who lately sought to restrain the failed concern from making use of the style they adopted, as likely to mislead the public.

The Ontario Sugar Refining Company's works at Berlin are still a drawing card. On Friday last the first excursion train of the season arrived there. There were ten railway cars filled to their utmost capacity by over 700 persons, and drawn by two engines. The excursionists were from Bruce, Grey, and Wellington Counties, consisting largely of farmers and their sons, while not a few came from Wiarton, Walkerton, Chesley, Harriston, Palmerston, Fergus and other points. The excursion was educational to the farmer visitors, who saw a great and growing industry in active working, and were impressed by the successful cultivation of the sugar beet on a large scale.

It is understood that the Ontario and Western Railway has practically passed into the control of the New York, New Haven and Hartford Company.

The Henderson Roller-Bearing Company's business has increased so rapidly that they find their present factory in Toronto unable to keep up with the demand. They are, therefore, about to erect a large plant in Winnipeg for the manufacture of bearings. They already have an office in that city.

A poetic correspondent of the Montreal Star asks why the erstwhile crystal air of the mountain and city should be contaminated and rendered smoky from the burning of forest leaves, when, under different arrangements, they might give excellent material for the enrichment of the soil.

The New York Produce Exchange has now adopted rules to govern trading in pig iron warrants. Trading will be initiated on the Exchange as soon as certain agreements with financial institutions have been signed and the rules formally posted for ten days. The trading will have for its basis certificates issued by a trust company calling for stated amounts of pig iron in storage with a warrant company. Upon delivery of a certificate to the trust company it will be cancelled, and an order issued upon the storage house for delivery of the iron.

Mercantile Summary.

F. A. Maber Co.'s departmental store, in Winnipeg, was damaged by fire last week to the amount of $20,000 or more; insured.

Negotiations have been going on for the purchase of the Province mine, on the south fork of Kaslo Creek, in British Columbia, but it is understood that the price offered was not sufficient. People in the vicinity are anxious for the property to be developed.

A Mr. McKenzie, of Montreal, is reported to have discovered some fine samples of asbestos, besides some fair specimens of gold, copper and magnetic iron ore near the head-waters of the Nottoway river, some 200 miles from Roberval. Mr. Obalski, the provincial geologist, confirms the value of the discoveries.

A report from Rossland, B.C., says that Messrs. Eden and Morgan, of the Great Northern Railway, and M. R. Galusha have bonded the Cariboo claim, adjoining the Jumbo mine, in the Rossland camp, for between $25,000 and $30,000. The bond is for two years, and calls for extensive development work. The chief value, so far as the veins have been opened up at present, consists in gold. Though there is considerable copper a large quantity of work is now going on at the Jumbo.

A Scottish company with, it is said, a capital of $100,000, has been organized in Edinburgh for the purpose of building a hundred-ton smelter at Slocan City, B.C. It is to be expressly for the purpose of smelting the gold and silver ores peculiar to the district around the lower part of Slocan lake and to lessen the high freight and treatment charges upon this ore sent to the Nelson and Trail smelters.

Mr. J. Breeze, who represents, it is believed, a very large amount of English capital, is reported to be negotiating with several owners of mines around Bullion Creek Yukon Territory. The proposition he makes is to open up and develop the various claims on a percentage basis. If successful in the proposed deal—and most of the claim owners have already agreed—several patent thawing machines will be installed to work the gravel this winter. In the spring, a large flume will be built and washing operations carried on on a large scale.

An old inventor tells the Portland Oregonian that small inventions are the most profitable. "Something homely, something little, something simple, something cheap. A hook and eye, a toothbrush, a shoe button. Those are the inventions that there is money in. Do you know the two inventions that it is conceded have made more than all the others? They are the safety pin and the steel pen. The first gross of steel pens sold for $36. That is 25 cents apiece. A profitable invention was the baby carriage. A woman originated it, and it netted her $50,000. Nothing like as much, you see, as the safety pin or the steel pen. The smaller and the cheaper an invention is the more chance it stands of being a money-maker."

Mr. Lewis, of Cardiff, South Wales, and Mr. Allison, of New York, both representing several other capitalists, propose to start, probably near Toronto, a plant for the manufacture of a certain class of tin goods not at present made in this country. Further particulars are not forthcoming, but it is stated that the promoters of the industry have chosen not to ask for favors of a municipal character.

Mercantile Summary.

The Dundee Mining Company, of Vancouver, which has a mine in the Ymir district, has been reorganized under the name of the Dundee Gold Mine, Limited, with a capital of $625,000.

The Sullivan Mining Company are build- a smelter at Marysville, B.C. When completed, it will probably place other properties in the district among the producers, as shipments of low grade ores will not have to be made so great a distance.

The Montreal Piano Manufacturing Company, Limited, capital stock, $75,000, has received a Dominion charter. Besides making and dealing in musical instruments, it will manufacture lumber and veneer, and other goods used in erecting buildings. T. F. G. Foley and E. Gingras, of Montreal, are charter members.

The city of St. John, N.B., in the process of buying property for the extension of its water system to Loch Lomond, purchased the pulp mill at the mouth of the Mispec river, which happened to be in liquidation. There is some prospect of the city selling or leasing it, however, offers from various firms having been received already.

A. P. Bogardus and C. A. Wickens have formed a company in Vancouver, under the name of the British Columbia Plate Glass Company, and bought out the leaded-glass works carried on at Mount Pleasant by James Bloomfield. The company will manufacture leaded glass, mirrors, and painting and interior decorations of all kinds.

."During the last eight months," said D. B. Fullerton, of Melbourne, Australia, to the Washington Post, "I have been in Japan. The little brown men are in tiptop shape this summer; they have made record-breaking crops of grain and rice, and the silk production is far in excess of the average—the best, so I heard, ever known."

The South-Western Traction Company have drawn up plans for their new power house at London, Ont., and will shortly call for tenders. With machinery, it is to cost in the neighborhood of $200,000. It will furnish power for thirty miles of road. With the extension of the line to Woodstock on the east and Strathroy and Glencoe on the west, it will have to be at least doubled in capacity. Two sites are under consideration—one at Lambeth, the other near St. Thomas.

The Winnipeg Casket Company's factory, erected a few months ago in the outskirts of that city, was on Tuesday last totally destroyed by fire. The loss is about $20,000, with but little insurance. On the same day there was a serious fire in Hague village, near Rosthern, Assa. The chief losers were the Leland Hotel, loss stated at $20,000; Canadian Territories Corporation Implement Agency, $3,000; L. P. Friesen, hardware, $9,000; T. E. McHaffy, general. merchandise, $3,000; John Kehler, general store, $3,500; H. Bowen, livery stable, $1,500. A fair amount of insurance was carried by several of the victims.

The Waterous Engine Works Co., Limited, Brantford, Canada, is prepared to manufacture Canadian Patent

Number 78,049,

and sell the same at a reasonable cost.

The bounty already paid this year by the Dominion Government for lead produced in Canada has already amounted to about $500,000, the rate having been 75c. per hundred pounds..

A vein of excellent graphite is reported to have been struck on the Canada Paint Company's property, near St. John, N.B. The depth bored was 65 ft. A shaft will likely be sunk in the near future.

The Mollie Gibson Mining Company, Nelson, B.C., will be reorganized. At a meeting last week it was stated that all old debts had been paid and a new company will be formed with a capital of $2,000,000. In the meantime, work on the property continues. There are large reserves of ore at the mine, and shipments will be begun in a few weeks. A concentrator will be built as soon as possible after the reorganization is completed.

⁂

TORONTO MARKETS.

Toronto, October 27th, 1904.

Chemicals, Drugs. Etc.—Trade is only fair, especially in the country. No further change has taken place in the price for opium, but business in that drug is less active. Quinine continues firm. Carbolic acid retains its firmness owing to continued heavy demand from Manchuria. Glycerine is advancing, and so is cantharides. Castile soap is less firm.

Dry Goods.—No particular change in the general situation has occurred since last report. Trade is fair, and prices in most lines quite steady. Cotton staples are particularly firm.

Flour and Grain.—A quiet market prevails for flour at unchanged prices, ninety per cent. patents being quoted at $4.35 to $4.45, in buyers' bags, east or west freights. Manitoba Hungarian patents fetch $5.70. Oatmeal is in rather quiet demand. Bran and shorts keep steady. The wheat market is still very firm. Ontario wheat has gone up 1 to 2c., while Manitoba remains at the old figure. Barley, oats and peas are not changed. Rye is 3 to 4c. higher. Receipts are still quite light, the farmers being too busy with their fall operations to trouble much with deliveries.

Fruits and Vegetables.—Considering the lateness of the season, a fair quantity of domestic fruit is still coming forward into the city and fetches, as a rule, good prices. Grapes are more plentiful than was anticipated. Oranges and lemons are coming in in limited quantities. The market for apples, both here and in the Old Country, is poor, but somewhat better than it was. The trouble has been, not only that the crop has been good in Great Britain, and that therefore a comparatively small quantity is required from outside, but that shippers here have been sending out poor-grade fruit, which sells badly itself and depresses the market for really good stuff.

Cement.—There seems to be a more than usually keen enquiry for cement just now, probably due to the rush to do as much as possible in building operations before the cold weather sets in. Prices keep about the same, at $1.50 at the mill, in carload lots.

Hides and Skins.—Hides continue firm at last week's quotations, and there is little of a new character to mention. The Chicago market is steady. Tallow is firm and has advanced a fraction.

Hardware.—While there is nothing of special importance in the hardware trade just now, it may be described as being quite good, and on a broad basis. In fact, in some lines there are evidences of rush in order to get goods shipped before the close of navigation. Orders for all kinds of seasonable goods, as well as for such articles as are needed in building operations, are coming in quite satisfactorily. The metals are moving with normal freedom, and values are generally steady.

Groceries.—Sugars continue much as mentioned last week, with a fair quantity going out at the recent decline. Evidence is to be seen in New York, however, of a probable coming firmness, if not a rise, in value. The canned goods situation is strong, especially for corn and tomatoes, which crops were shortened owing to the early frosts. Fruit, too, is firmer than usual at this time of the year. In teas there is nothing of interest to report. Coffees continue somewhat on the firm side.

Live Stock.—A better tone has prevailed both for export and butchers' cattle this week. Not very many were offered on the market, but they were taken up quickly. For poor stock, the demand was poor. Trade is less active for feeders and stockers. Milch cows fetch good prices for good stock. The run of calves has been larger than usual, but values keep steady. Sheep and lambs are quite firm. Hogs are lower this week.

Provisions.—Butter is selling at good prices, but the prospects point to large supplies coming forward in the near future. Cheese retains its firmness. Eggs continue high under small receipts. Beans are firm at about $1.50 to $1.55. Hops are quite firm, in sympathy with reports from England and other countries. The general price for average quality is about 30c. A brisk trade is going on in hog pro-

ducts, and prices are good, in spite of the decline in live hogs. The Cincinnati Price Current says that there has been a continuance of fairly liberal offerings of hogs, the numbers being considerably in excess of the movement a year ago. Total western packing, 395,000 hogs, compared with 385,000 the preceding week, and 330,000, two weeks ago. For corresponding time last year the number was 300,000, and two years ago 365,000. From March 1st the total is 12,460,000, against 12,315,000 a year ago—an increase of 145,000. The quality of current offerings continues variable, with evidences of betterment in some instances,. Prices are further considerably reduced, prominent markets at the close averaging about $5.05 per 100 lbs., compared with $5.50 a week ago, $5.90 two weeks ago, $5.30 a year ago, $6.65 two years ago, and $6.05 three years ago.

Wool.—Holders of fleece still keep firm in their ideas as to values, but trade is very quiet. In fact, scarcely any trade at all is passing.

* * *

MONTREAL MARKETS.

Montreal, 26th Oct., 1904.

Ashes.—Potash continues in very limited supply, and No. 1 of good tares would readily bring $5.90 to $6; seconds, $5.45 to $5.50 per cental. A nominal quotation for pearls is $8, but there is still a pronounced absence of business in these sorts.

Dairy Products.—The exports of cheese from Montreal last week aggregated 95,822 boxes, being 22,864 boxes more than for the corresponding week of last year, but, the total shipments to date are still 341,000 boxes behind the figures at this time a year ago. Of butter there were shipped last week 12,934 packages, being 4,719 more than for the corresponding week of 1903, and the total gain for the season thus far is 140,915 packages. For cheese the British demand is momentarily inactive, but values are steady for fine fall makes, especially as a good many factories will shut down shortly. We quote finest Westerns, 9⅜ to 9½c.; Townships, 9⅛ to 9¼c.; Quebecs, about 9c.; summer goods, 8½ to 8¾c. In butter the movement is comparatively light, but quotations are fairly steady at 19 to 19½c. for fine creamery in boxes; under grades, 18 to 18½c.; dairy makes, 15 to 16c. per pound.

Dry Goods.—Travelling salesmen's reports from different sections of the Dominion say that fall stocks on the shelves of retail dealers are little broken into as yet, and the volume of sorting business is consequently just moderate, but a fair proportion of spring orders are being booked. City retailers also complain of comparatively slow business in their shops for October, and general remittances show some slackening off.

Furs.—Advices with regard to the London sales, scheduled to begin yesterday, are yet lacking, but full cable reports are expected by Saturday next. Receipts of raw furs so far consist only of a few lots of unprime skins, which dealers are not at all anxious to handle.

Groceries.—The reduction in sugar

prices, noted last week, still holds, but it is claimed that probabilities favor a restoration to the old figures, as the market for raws is reported very firm. In the meantime standard granulated is quoted at $4.55 at the factory, with yellows and soft grades from $3.95 to $4.30. For yellows there has been an unusually active demand of late, which is hard to account for, and stocks in that line are very low with both refineries. Molasses is in good demand, as is usual at this season, and jobbers' prices are steady at 29c. for standard Barbados, in puncheons, and 31½c. in barrels, but it is said some holders have been offering round lots at 26c. There is no great volume of business passing in teas, but Japans are reported rather firmer, and it is said the competition in this line from Ceylon greens is not likely to prove so serious a factor as first anticipated, because the latter are said not to hold their quality as well as the Japan goods. Cloves are reported much firmer. New currants, ex the "Escalona," are said to show excellent quality, and are being quoted at 4⅞ to 5c. for fine Filiatras in cases; fine off-stalk Valencia raisins, 5½c., and selected, 6c. No new Sultanas are to hand yet, but quotations are made at 7 to 7½c.; old California, 3-crown muscatels, 5½c., and this year's crop, 6½c.; seeded, ditto, 8½ to 9c. per pound.

Hides.—The demand for hides from tanners is quite fairly active, fully absorbing supplies. Dealers continue to pay 9c. per lb. for No. 1, and quote the usual half a cent advance. Lambskins remain at 80 cents each.

Leather.—A good many Quebec boot and shoe manufacturers are preparing for stocktaking, and the demand from this quarter is light. Local manufacturers are buying in moderation, no very extensive sales being reported. In no line is there any change reported in quotations.

Metals and Hardware.—The movement in these lines shows no special activity, the volume of trade being much less than last fall, orders being marked by a general spirit of moderation. The week has resulted in little revision of prices. Shading in prices of Canada plates, galvanized Canadas, etc., is reported in some quarters, but from $2.25 to $2.30 is generally asked for fifty-twos of the former in a jobbing way, and $3.90 for the latter. Tinplates are a little firmer in England, but local prices for standard brands and weights remain at $3.65 for cokes, and $3.90 for charcoals; Ternes, about $6.25; galvanized sheets, $4 to $4.25; black sheets, $2.20. In pig and bar iron there is nothing new. Iron pipe is easy at $4.07 base price. Ingot tin keeps firm at 32 to 32½c., and lead at $3.30. For copper 14c. is the general quotation in a jobbing way. No recent revision in prices of nails, wire, etc., is reported.

Oils, Paints and Glass.—Turpentine is a little easier at 81c.; linseed oil sells at 42 to 43c. for raw, and 45 to 46c. for boiled. Fish oils are little asked for. Glass is firmly held at the late advance, and stocks in this line are getting much reduced, with more or less uncertainty as to the prospects of replenishing the same; some importers say they have not yet received the full complement of orders placed last spring. Leads, putty, etc., remain as before.

Mercantile Summary.

A company has been organized under the name of the Canadian Klondyke Mining Company, Limited, Windsor, Ont., capital stock, $750,000; to acquire and develop mining interests in the Yukon. M. J. Murphy and F. T. Moran, of Detroit, Mich., are leading members.

The citizens of Rat Portage have resolved that its name shall henceforth be Kenora. Upon this the Montreal Gazette comments: "Kenora sounds musical, but its use means a sacrifice of distinction. There may be many Kenoras. There could only be one Rat Portage."

The Ballarat Mining Company, Limited, Toronto, capital stock, $300,000, has been incorporated. It will carry on the business of a general mining, milling, and development company, and is also authorized to promote and assist financially the undertakings of other corporations or persons.

The Canadian Straw Fuel Machine Company, Limited, has received an Ontario charter. It will make and deal in straw fuel machines, farm implements, etc., and will carry on a machine shop in Toronto. The capital stock will be $250,000. L. B. Forsyth and W. G. McCrimmon, of Toronto, are charter members.

The Canada Flax Fibre Company, Limited, which has just been granted a charter by the Dominion Government, has an authorized capital stock of $100,000, and will have its head office in Montreal. It will acquire machines and processes for the treatment and decortication of flax fibres, operate mills, and carry on a general manufacturing and mercantile business.

The Montreal Heat, Light and Power Company has declared a dividend for the current quarter at the rate of 4 per cent. per annum.

Charlottetown, P.E.I., city council will issue $16,000 worth of 20-year, 4 per cent. debentures for local improvements. It will also arrange for a special bank loan of $15,000 to help pay for the new market building.

The Big Master Mining Company, a corporation incorporated under New York laws for mining, milling, and development purposes, has been authorized by the Ontario Government to carry on business in that province with a capital not exceeding $300,000. P. E. Mackenzie, of Rat Portage, Ont., is the company's attorney.

The General Illuminating Company, Limited, capital stock, $50,000, headquarters at Ottawa, has received a Dominion charter. It will make and deal in gas and electricity, instal and operate machinery for supplying gas or electricity for private or municipal use. E. H. and F. P. Bronson and E. A. Le Sueur, of Ottawa, are charter members.

The Canadian Northern Railway recently installed in its Port Arthur terminal elevators a cleaning and drying plant, which is now in good working order. It not only handles off-grade grain arriving over the Canadian Northern's lines, but receives damaged grain from the Canadian Pacific, the cleaning plant of the latter having been disabled. Under the grain act, public terminal elevators cannot receive for storage, grain inspected out of condition, which would entail the disposal of a large quantity of grain at forced sale—besides tying up a large number of cars at a season of the year when they are urgently needed in the movement of the crop.

A special meeting of the fire insurance committee of the Winnipeg Board of Trade was held on Tuesday last to meet Robert Howe, inspector for the Canadian Fire Underwriters' Association, who has been looking into Winnipeg's fire-fighting apparatus. The principal feature of Mr. Howe's recommendations was his advising the immediate construction of a high pressure system for fire protection, with a pumping station on the Red river. He declares that the city electric lighting apparatus should be located in a separate station from the pumping house, and recommends the construction of a 12-inch water main on Main street, between Graham Ave. and the C.P.R. tracks.

DOMINION IRON AND STEEL COMPANY.

The annual meeting of the shareholders of the Dominion Iron and Steel Company was held in Montreal on the 19th inst., Mr. J. H. Plummer occupying the chair. This gentleman, in his presidential address, stated that the recently completed rod mill had been pronounced by experts the best ever built. To-day it is turning out iron rods of good quality. Other additions to the plant were proving equally satisfactory. It was worthy of note that Lake Superior ore had been landed at Sydney almost as cheaply as it was in Pittsburg, while Swedish ore could be landed at Sydney more cheaply.

Mr. Frederick Nicholls showed what a change for the better had taken place in the company's position during the last eighteen months, and Mr. Graham Fraser, the director of works, gave a resumé of the past year's operations. The profit and loss account is as follows:

Dr.		
Interest on 1st mortgage bonds	$395,550 00	
General interest account	131,303 07	
Sinking fund, first mortgage bonds ..	55,799 96	
Dividend on preferred stock, April 1st, 1903	87,500 00	
		$670,153 03
Balance of account for coal department written off		245,467 23
Appropriations for shrinkage in value of materials not chargeable to operating account, 1903, provision for unsettled claims, etc.		123,633 73
		$1,039,253 99
Cr.		
Balance brought forward, December 31st, 1902		$309,612 88
Net profits operating account, iron and steel department, 1903	$115,576 87	
Rents received ...	8,036 86	
Reserve and suspense account transferred	21,790 27	
		$145,404 00
		$455,016 88
Balance at debit carried forward, Dec. 31st, 1903		584,237 11
		$1,039,253 99

The old board of directors was re-elected, and Mr. J. H. Plummer again chosen president, and Mr. F. Nicholls, vice-president.

COLONIAL MUNICIPAL STOCKS.

British capitalists sometimes complain of the difficulty experienced in arriving at a fair standard of value for colonial municipal securities. In the Mother Country, the yield upon such securities varies but little, but this is not the case in distant portions of the Empire, where the comparative value of such bonds depends so largely upon local circumstances difficult to gauge away from the spot. It is precisely in such new and rapidly expanding communities, however, that the need for borrowing makes itself most keenly felt, and where the expenditure is confined to quite necessary requirements, there can be no doubt that ample security may be obtained for the sum borrowed.

The London Economist recently presented to its readers an interesting table setting forth some of the chief colonial municipal loans, with the rate of interest paid, date of redemption, price and yield. The returns, it is seen from this, vary from slightly over 3½ per cent. to a little less than 5 per cent. On the whole, the largest return from the stocks quoted comes from loans issued a long time ago by New Zealand municipalities. In those times these institutions were rather reckless in the way they raised money, and the prices of such stocks are low to-day. After New Zealand, the loans giving the highest returns are South African. Melbourne and Sydney loans give a smaller return, and their resources have received but little development in recent years. Canadian municipal loans give a smaller return still.

* * *

TORONTO STOCK TRANSACTIONS.

The public would appear to be entering the market in earnest, and the slowly augmenting volume of transactions during the past few weeks has culminated in a very large turn-over of shares. Values are very firm and there has been a distinct upward movement in prices. Some stocks are already not so far behind the high-water mark of last year. The following summary will show the number of transactions in the more active securities: Bank of Montreal, 10 at 252; Commerce, 343 at 159-161⅜; Imperial, 32 at 232-233; Dominion, 20 at 242; Hamilton, 322 at 216¾-218½; Ottawa, 14 at 213-213½; British Am. Assurance, 10 at 97; Consumers' Gas, 360 at 205-210⅞; C.P.R. 1,186 at 129-134⅞; C.P.R. Rights, 311 at 5¾-5⅝; Can. Gen. Electric, 785 at 160½-161½; Bell Telephone, 468 at 155-160¼; Rich. & Ont. Navigation, 105 at 57-60⅜; Toronto Railway, 493 at 104½-105½; Twin City, 650 at 103½-103⅞; Sao Paulo, 2,793 at 103¾-105½; Dominion Steel, 540 at 14-14⅞; pref., 50 at 42; bonds, $22,000 at 75-75½; Dominion Coal, 115 at 56½-58½; preferred, 10 at 110¾; Nova Scotia Steel, 1,900 at 60-63¾.

* * *

BRITISH IRON AND STEEL.

According to figures collected by the British Iron Trade Association, the production of pig iron in the United Kingdom in the first half of the present year was 4,048,695 gross tons. This is a decrease of 330,033 tons on the output for the first half of the year 1903, which amounted to a total of 4,378,998 tons, and is a decrease of 47,513 tons on the production of the first half of 1902. When, however, the 1904 figures are compared with those of the first half of 1901 they

THE SUN

Typewriter and the Printing Press Use No Ribbons.

The work of this wonderful writer has all the clear cut excellence of the perfecting press.

The uniformly dainty neatness of its work and its lightning rapidity have installed it in many offices where to other makes of machines they were "full up."

Said a prominent insurance man who called upon us, "We don't really need another typewriter, but we shall make room for the SUN."

Is your work not important enough to make neatness desirable? Why pay more money to sustain the blur, and the blotch, and the worry?

VISIBLE (Absolutely) POLYCHROME (Prettily)

RIBBONLESS (Economically)

For manifolding power, durability, reliability and permanent excellence of work, adaptability to all classes of work, ease, speed and convenience of operation, the "SUN" excels.

Price of No. 3 Model, $95.00

Price of No. 2 Model, $55.00

If interested, call, write or phone. We shall be pleased to give full information.

ESTABLISHED 1858.
Managers and Underwriters.

show an increase of 164,421 tons. Out of the fifteen iron-making districts into which Great Britain is divided for the purposes of these returns, eleven show a decrease, and the remainder show an increase in 1904, compared with 1903. The most notable declines appear to have taken place in Scotland, in West Cumberland, in Lancashire, in Notts and Leicestershire, in South and West Yorkshire and in Cleveland. The production of Bessemer steel ingots in the first half of 1904, according to returns sent into the British Iron Trade Association by steel manufacturers, was 865,683 gross tons, which compares with 911,670 tons in the first half of 1903, and with 888,378 tons in the first half of 1902. The greatest output for the past half-year was attained in Cumberland and Lancashire, where four works produced 263,658 tons of steel ingots. One of the features of the steel industry of Cleveland for 1904 has been the entire cessation of the manufacture of Bessemer acid steel, the two Bessemer works employed in that region having in 1904 produced basic steel alone. The total output of acid Bessemer steel for the first half of 1904 was 553,071 tons, while the output basic Bessemer steel was 312,612. The greatest production of acid Bessemer steel was reached in Cumberland and Lancashire, and the greatest production of basic Bessemer steel in the Cleveland district.

The output of open hearth steel ingots

THE COMMERCIAL
The WEEKLY FINANCIAL, COMMERCIAL & GENERAL TRADE NEWSPAPER of the GREAT WEST.

Reaches direct 90 per cent. of the retail, wholesale and manufacturing trades of Northwestern Ontario, Manitoba, the Territories and British Columbia in advance of, and publishes more interesting commercial and financial news than any other similar newspaper in Canada.

Do you want to sell or increase the sale of your goods in these, The Best Buying Provinces in Canada?

Estimated that 200,000 new settlers will arrive this year. Will the retail merchant offer them your goods?

Our advertisers our best references. We beg the favor of an enquiry.

THE HUGH C. MacLEAN CO., Limited, Publishers, Winnipeg.

Eastern firms should subscribe for The Commercial and keep posted on Western trade

in the United Kingdom for the first half of 1904 was 1,670,129 gross tons, compared with 1,639,239 tons in the same period of 1903, and with 1,710,602 tons in 1902. The districts showing a decrease on the corresponding months in 1903 were Wales, Sheffield, and the Lancashire-Cumberland section.

The make of acid and basic steel in the first six months of 1904 compares as under with the first six months of 1903:

	1903. Tons.	1904. Tons.
Acid	1,368,588	1,326,882
Basic	270,651	343,247
Totals	1,639,239	1,670,129

The total number of open hearth furnaces available for use at the end of the first half of 1904 was 480.

UNITED STATES FINANCES.

Henry Clews & Co., New York, in their weekly letter say: A marked revival of the speculative spirit has set in. It has come with a suddenness and a strength that is almost astonishing. Such an outburst, exceeding the most sanguine expectations, is only to be explained by the fact that intrinsic conditions were generally sound, and that nothing but some signal event, such as the banishment of all doubt regarding the crops, was necessary for the release of pent-up forces which sent prices surging upwards during the first part of the present week. The recovery came with a rush that would raise serious doubts about its stability were it not for the genuine and widespread improvement in underlying conditions that fully warranted the change. A somewhat tardy realization of this change by the public caused the latter to enter the market impulsively in order to recover lost opportunity; and, as is always the case, the public is rapidly becoming as much over-sanguine as it was over-depressed less than six months ago. Such a sharp revulsion of feeling is bound to be reflected in values, and it may be some time before the market recovers its equilibrium and sentiment again adjusts itself accurately to the general situation. Now that the speculative fever has fairly broken out it must run its course until broken by reverses, although it must be admitted that no natural hindrances are yet in sight. The outside situation continues good, and is improving daily, while the technical situation remains free of weakness. The only checks thus far administered have come from big insiders, who evidently are opposed to a runaway market.

In the latter half of the week prices reacted considerably under free realizations. Liberal selling could be detected by certain of the big insiders, but such stocks were readily absorbed, and some of the leaders apparently took back their stocks on the declines. The speculative situation has not yet reached the danger point, but prices are now so high that the temptations to take profits are enormous, and are of course increased with every advance. The public is coming into the market with increasing force daily, and as the big interests are not likely to permit any serious reaction, the prospects are for an excellent trading market during the next few weeks. Technically, the situation has been much improved by the decline which began Tuesday and lasted several days. This was what is generally called a "healthy reaction."

* * *

—An old lady was noticed by the vicar to always bow her head when the name Satan was mentioned. He asked her the reason for this strange habit of hers, and she replied: "Well, politeness costs nothing, and you never know."

Workman's Rights

In Canada a workman may proceed against his employer under the Workman's Compensation for Injuries Act, and at common law. That means untold annoyance and inconvenience to an employer. An employer is even liable for damages to an employee for injury resulting from the negligence of a fellow employee. Oft-times a workman will get back at an employer in this way. The employee may or may not win. Whether he does or not it means a great deal of anxiety to you as an employer. Let us relieve you of all this. Our liability policies are designed to do this very thing.

Will be glad to explain our plan.

Another Milestone

Has been passed in the successful history of The Canada Life Assurance Company. Ten years ago the Company issued Policy Number 60,000. Now Policy Number 100,000 has been paid for. While 60,000 policies represented the growth of 47 years, the past ten years have alone produced two-thirds as many.

In assets too, there has been a proportionate growth.

For The Canada Life.

THE PANAMA CANAL.

Some say that the last great alteration in the face of the globe will be the construction of the Panama Canal. At any rate, the intention of the United States Government to carry out the project inaugurated by the enthusiastic and ill-fated De Lesseps, is so important that it deserves a little more attention than the Canadian press has so far thought fit to bestow upon it. It may indeed be remarked that the cutting of a canal across the Isthmus of Panama is a work of world's importance, in that term's truest sense, for though executed with American money, and taken in hand with American energy, it remains to be seen how far the United States as an individual nation will particularly profit from it. Unless the merchant marine of that country grows—and much more rapidly than it promises now—it looks as if American dollars will be spent largely to facilitate carrying on commerce in other nations' ships. To some extent it may be said that even Canada is likely to derive proportionately just as much benefit from its construction as the country primarily concerned. Even now, when the full difficulties of the undertaking are but barely discerned, it looks as if it will cost in the neighborhood of $200,000,000, and interest charges will certainly break into another $50,000,000, even should everything work smoothly.

It is in this character of a world's work that we think the Panama Canal scheme likely to prove of interest to Canadian readers, and for this reason we present a few particulars of the project gleaned from a very entertaining account found in a recent number of the Marine Review of Cleveland.

Of course the main objects of the canal will be to open up to eastern States commerce the at present comparatively unaccessible western ports of South America, though it may be remarked parenthetically that the United States, in spite of much talk about South American republics, as yet possesses no regular steamship communication even with the east coast of that continent, which, of course, needs no canal. The canal would also afford a good route for Atlantic coast vessels bound for Japan, New Zealand, Australia, etc. It is estimated that the traffic utilizing the canal at its opening would be about 6,700,000 tons. The tonnage which at present traverses the Suez Canal is nearly 13,000,000 tons, and that through the American Soo, between Lakes Huron and Superior, is 35,000,000 tons, so that the prospects for any great pecuniary profits from Panama are not flattering.

The United States Government has wisely begun its great work by preparing healthy surroundings for the large force of men who will be engaged in the construction. Not that the Isthmus quite deserves all the curses and sensational reports on its pestiferous climate that have been showered upon it. As in many other tropical regions, sanitation has for ages been almost completely neglected, but the same care and thoroughness which have made Cuba appear in its true character as one of the health resorts of this continent, will, no doubt, under American tutelage do much to remove from Panama the reproach of being absolutely unfit for human habitation. Already a commission is at work on the Isthmus, sewerage and waterworks are well under way, and yellow fever has not made its appearance, we believe, for several months.

The plans of the new company, have now been practically all drawn up. The canal's total length, from the point where it leaves the Bay of Limon to where it enters the Bay of Panama, will be about 43½ miles, besides about 3 miles more through the bay to deep water. There will be four locks, two on each coast slope, with a maximum lift of 29½ feet each. The minimum draught of water throughout will be 29½ feet. The bottom of the summit level is fixed at 68 feet above mean tide. The plan follows as exactly as possible that formulated by the old company, and thus utilizes the extensive excavations made by the latter. The first idea of the French company, however, was to build the canal at ocean level, but a serious difficulty was met with in the necessity for a great central cut to a depth of 129½ feet below sea level, and incidentally the creation of a new bed for the Chagres river, and this alteration of plan is probably what staggered the old management. The purchasing of tools and machinery has not begun in earnest yet, though preparations are being made for this end. One of the greatest obstacles met with by the old company was the breaking down of important machines, in some cases delays of six months or a year being caused thereby. This will be overcome, it is hoped, by the initial establishment of a complete plant, capable of self-sustaining work and full repairs. The narrow neck of land connecting North America with its sister continent, is likely to be the cynosure of the world's engineering attention for many years to come, though it is to be noted that one of the chief experts concerned prophesies a full completion of the work within seven or eight years of the time at which it is actually started.

* * *

THE SITUATION IN FURS.

A review of the past fur season will show that our prognostications of a year ago were correct. The year's operations were attended with losses and dissatisfaction for a good many dealers, who allowed themselves to be carried away by the exorbitant prices asked. It is true that furs lost none of their intrinsic value; they were in good demand. The trouble consisted rather in the inflated prices to which they, or many of them, were driven by the insistence of collectors and the belief of dealers that the previous year's experience might be repeated on an even larger scale. That these people were absolutely wrong was proved by the consecutive declines which took place at the London sales. The collector should by this time have come to see the mistaken nature of his policy of holding up prices at any cost, for while he may reap the profit accruing from these inflated valuations for a little time, yet the market is bound to break at no late day, and then he is caught with a large stock of high-priced furs which cannot be disposed of satisfactorily, besides which, with fancy quotations broadcasted over the country, it becomes more and more difficult for him to buy.

The season now approaching may be regarded on the whole as fairly favorable, that is, provided values are kept on a reasonable basis. To mention particular furs, bear is at such an extremely low price as to lead to the hope that this will stimulate the trade and encourage the manufacturers to push its sale. Good bear is a fine skin and should not be allowed to remain long in its present neglected position. Otter is likely to prove a good seller, as indeed has been the case throughout the past season. Beaver shows signs of a continuance of the comparative apathy with which it has been regarded during the past several years, though encouraging rumors come from Paris about it. Lynx should prove a satisfactory skin to handle if the value can be kept on the same plane as last spring's closing figures. Extreme prices cannot be maintained. Mink met with high favor during the entire season, a fact which is due largely to the popular preference for brown as a color, as well as to this fur's other individual attractions; if dealers do not allow this fact to run away with their judgment, this experience is apt to be repeated in the future. Musk rat proved very disappointing and in some quarters—at least in the United States—there are still large stocks in hand, in spite of the noteworthy decline last spring. A somewhat similar course attended the demand for skunk; it suffered severe declines, and large stocks are undoubtedly still in hand, which are bound to act adversely on the market. It is a pity that this should be the case with such a staple article among American furs as skunk, and it is to be hoped that dealers will endeavor to remedy the matter by means of a very careful valuation of its real uninflated worth. American opossum promises well; it sold freely all through last season and is likely to hold its position at a good level in the one coming. Coon cannot expect to retain its high value of a year ago, and the lower range of prices encountered during the year are scarcely likely to be improved upon. Red fox is in good favor, and holdings are at present probably somewhat limited.

As may be seen from the above notes, the fur trade will have to proceed upon very different lines of action from those taken during the past year or two. However, so long as dealers look upon its position in a clear, unbiassed light, there is no particular ground for pessimism. There is so much money, so much buoyancy, in Canadian industrial and commercial conditions at the present time that the demand for furs is bound to be good. At the same time this consideration should not be allowed to weigh too heavily in the making of prices for export to outside markets. There, totally different terms come into play. Of various kinds of American furs, fully 75 per cent. are in normal times sent to Russia, but trade in that country at present is bad and unsettled. Again, in Leipzig, a great fur centre, millions of marks were lost last year owing to the abnormal prices to which many furs were raised. This has created a feeling of depression, only to be dissipated by a particularly heavy demand from the consumer, which is unlikely to arise, however, owing to the generally poor crops just harvested in Germany.

We would not give the reader the idea that prices for furs are lower, without exception. There are a few cases in which local reasons have conspired to bring reverse results. For example, in Australia, wombats have made a serious advance in price, amounting to perhaps 40 per cent., owing to restrictive legislation. Another class of furs affected by recent events are those coming from Manchuria. Prices for grey goat skins, used for robes, have risen 20 to 40 per cent., and it is almost impossible, under the present state of affairs and the heavy purchasing for local requirements, to make contracts at all. There is a better demand for linings than probably has ever been experienced before, though grey linings are cheaper than a year or two ago.

And now a word regarding Persian lamb, that old favorite with the Canadian consumer. At the Nijni-Novgorod Fair, prices for this article, as for others, were depressed, and the collectors had lost fortunes in trying to keep up the prices on a par with last year. Canadians, however, are now very prosperous and they seek only the very best qualities of Persian lamb in the market. Now, of such as these, the stocks in hand are but limited, and they fetch a very high price, so that, in this particular article, there is no chance of obtaining anything really cheap.

* * *

PRICES FOR LIVE STOCK.

The quality, both of butchers' and export cattle lately offered in Toronto, has been quite poor, as a rule, with the natural result that prices have kept low. For export cattle there was hardly any demand in the city market, and they sold at $4.40 to $4.75 per hundred for the best, down to $4.25 for average, and less for rough feeders. At the Union Stock Yards they fetched from $3.87½ to $4.65, the general range being from $4.25 to $4.40. Export bulls fetched $3.40 to $3.75, though a few choice obtained $4. Butchers' cattle at the same market varied greatly in the price obtainable. The best realized fair values, from $4.45 to $4.65, while the average quotation was around $4, and inferior were only worth $2.50 to $3. At the city yards, also, there was a pretty good enquiry for really choice butchers', but these were scarce and very few cattle sold for higher than $4.40. The tone in fact was easy all round. Stockers and feeders have been in good supply for so long that the demand has become slack. Animals for distillery purposes fetched $3.40 to $3.75, or less, unless they were good stock. The demand for good milch cows was strong, more than the market could supply, in fact, at the last day's trading at the Junction. They are worth anywhere from $30 to $60 each for good grades. The run of sheep and lambs has been heavy, but values keep steady. Export ewes have fetched about $3.50, lambs, $4 to $4.50.

Liverpool advices of ten days or so ago stated that the improvement in demand for cattle, which had been anticipated for some time past, had not marterialized, perhaps on account of the damp, uncomfortable weather, but probably due still more to the poor quality of the stuff received. In London at the same time, however, a better tone was discernible, Canadian bullocks of best quality realizing 12¼c., second quality, 11 to 11½c., and American sometimes 13c. Canadian sheep sold at 11½ to 12c. per pound. There has since been a decline, however. Taking the whole cattle market, both prices and trade in the United Kingdom are distinctly discouraging, and the wonder is expressed how exporters on this side can stand their continued losses.

PUNISH CIVIC DISHONESTY.

The arousing of a community or a people to
the evil effects of municipal corruption, and to com
them is not always easy. For many years bribery a
graft ran riot in the great cities of the United Sta
while the mass of population who suffered from th
were either ignorant of these vices or careless of th
ruinous effects. But when things are at their wo
as the saying is, they begin to mend. And in the l
five years more has been done than in any previ
period to probe municipal sores of the kind and
cure them.

Chicago, Minneapolis, Denver, St. Louis, Ph
delphia, New York, are some of the places where
honesty was draining the money of the citizens
steadily lowering the tone of city administrati
Happily, a civic spirit has been aroused to com
these evils, and good strides have been made towa
remedying them.

During 1903 there were sentenced to State pri
in connection with the Ames scandals in Minneapo
Mayor Ames and the chief of police for six ye
detectives and policemen for other terms, while
superintendent of the poor and his book-keeper w
indicted.

In Grand Rapids, Michigan, the confession o
former city attorney laid bare an alarming and
gusting plot in connection with the water-wo
Fourteen aldermen and ex-aldermen of t
city, a deputy city marshal, a state sena
an ex-city clerk, four newspaper men,
three attorneys were arrested charged with brib
conspiracy, perjury. Three confessed and three w
convicted. A peculiar phase of this case is that
cause some of the daily papers were involved the p
ple of the city were unable to get full reports of
court's proceedings.

In Chicago, an investigation into alleged "gr
was conducted by a special committee of the
council, appointed by the mayor. Five health insp
tors were indicted for bribe-taking, that is, for all
ing plumbers to omit the tests of plumbing work
quired by city ordinances. This is a peculiarly h
rible procedure, since it exposes whole households
virulent maladies. The system covered nearly
entire city, and thousands of persons were expo
thereby to typhoid, diphtheria, and other dea
diseases. As a result, the sanitary bureau of the
has been purged and is now in a fair way to bec
an effective safeguard of the public health.

In St. Louis a great campaign has been car
on by Mr. Folk, circuit attorney, against boodl
Some were convicted and others confessed, but t
have not yet got their deserts because the attor
was hampered by the technicalities of the law, wh
originally devised to prevent injustice being done
the one innocent man among the 100, are now be
utilized to prevent the 99 guilty men from gett
their just deserts. The jury found "Boss" Butler,
that city, guilty, but sentence was reversed beca
as one observer put it, "there was an attempt by a
facto boodler to bribe a de facto board of health,
to get a de facto 'rake-off' from the cost of remov
de facto garbage under a de facto contract made

virtue of a de facto law, and the de facto boodler was convicted by a de facto jury in a de facto court and sentenced to a de facto penitentiary. If the Supreme Bench of Missouri had been less impressed by technicalities Ed. Butler would now be serving a de facto sentence at de facto labor."

As many more cities might be cited where honest residents and honest officials have been aroused to look into the doings of municipal boodlers and bribers—people who were not content with decent wages for decent work, but wanted to grow rich at the expense of other people. It was no harm, so they argued, to rob a city or a state, no one would miss what they stole. The people at large were careless. Indifferent voters beget indifferent officials. Three people out of four would say when told of suspected boodling, "What's the use? who cares?" And when enquiry became too close, the very scoundrels who were stealing from the city or were screening the thieves would appeal to those in high places for protection from punishment. According to the president of the Chicago Investigating Commission, Mr. Powell, "whenever a policeman is in danger of losing his job, there is usually an alderman or two ready to come to his rescue. There is also a large body of so-called 'prominent citizens' to plead for him."

That there has come about a resolve on the part of large communities in the United States to purify municipal administration appears to be in no small degree by reason of the influence of the National Municipal League, a body founded some ten years ago with the object of fighting dishonest administration in municipalities, and punishing those who rob the people. It has its central office in Philadelphia, (secretary, Mr. Clinton Rogers Woodruff), and an executive committee consisting of prominent men in twenty different cities from New York to Chicago, from New Orleans to Cleveland. The recent exposure of municipal dishonesty is not to be taken, however, as meaning that the public service is growing more degenerate, for corruption has existed since the beginning of government. It only shows that people are being aroused to look after their civic servants, to insist upon the punishment and dismissal of thieving from the public, and to the adoption of clean administration and business-like methods.

* * *

TORONTO CONFLAGRATION LOSSES.

In an article last week on Fire Insurance in Canada, reference was made to the extent of the losses made by British fire underwriting companies, through the Toronto conflagration of April last. This reference was based upon statements on page xx. of the Report of the Canadian Superintendent of Insurance, which give the losses, at that great blaze, of individual companies and of groups of companies. For example, the Canadian companies lost by the Toronto fire of this year $1,391,427; the American companies, $1,320,094, and the British companies, $4,538,802. Here is a total of $7,250,323. In addition to this, says the report, "losses were sustained by companies which do not report to this office, the precise amount of which is consequently unknown to the department, but would probably exceed half a million dollars, thus increasing the total loss sustained by insurance companies to about $7,750,000." We give a tabulated statement of these losses by licensed companies, and the aggregate loss of each of the groups. We observe that the Norwich Union Bulletin for November, just to hand, gives in addition the ratio which these Toronto conflagration losses bear to the total receipts in Canada of the licensed companies for the whole year 1903. And we have taken the liberty of adding these ratios to our table. The narrowness of our column does not permit the further addition of the amounts of net premiums received, but the ratio is significant enough.

The Canadian companies lost by the Toronto conflagration $60.96 out of every $100 they received as net premium in 1903; the British companies lost $64.30 out of every $100; the United States lost 74.1 per $100. The proportion of loss, taking all the companies, was 63.68 per cent. of the premiums. Well may the Superintendent say, in comment: Attention is again directed to the necessity of creating and maintaining special funds for the purpose of providing for just such disasters as that which occurred in Baltimore in February, 1904, and that at Toronto above referred to; and as pointed out in the report issued in 1900 on the occasion of the Ottawa-Hull conflagration, such fund should be substantial in amount, and be looked upon, not as surplus from which dividends may be paid, but as actual liabilities.

Extracted from Annual Statement of Dominion Government Insurance Department.

NORTH OF ENGLAND LETTER.

The utmost curiosity prevails in insurance circles over the rumor of a new "merger." The "Policyholders' Journal" is the authority for the startling statement that the fine old Hand-in-Hand is to be swallowed up by the pushing Commercial Union Company. The secretaries of both offices deny the truth of the rumor, but we on this side are schooled into distrust of official denials. Mr. Thiselton's word that "there is nothing in it" and Mr. Mann's assurance that the story is "absolutely untrue" do not consort well with the Journal's assurance that the agreement is "practically signed, sealed and delivered." Moreover, the officers do not accept the Journal's challenge to deny the fact in its own columns. Were the allegations baseless, some more definite and convincing refutations must surely have been forthcoming. It is notable, too, that all recent absorptions have been heralded by parallel denials.

As there is only one office in the world which is 207 years of age, the situation is unique, and sentimental considerations seem to stimulate the excitement. It was in 1696 that the Hand-in-Hand was formed as a fire company, and not until 1836 did it write life business. Its prestige and connection are most valuable incidentals to acquire, and one need have no doubt but that the strenuous management of the younger office would turn the new-gained glory to excellent account. Both offices transact fire and life risks, and the Commercial Union adds accident and marine business. A "mutual" office, the Hand-in-Hand is not a joint-stock one, despite the existence of a board of directors. As the other company is proprietary, and owned by joint-stock owners, the process of transfer must be far from simple. Indeed, a special Act of Parliament would be required to effect the carrying-over. Except that the British Empire Mutual Life was swallowed by the Pelican one cannot recall any amalgamation under similar conditions. The Commercial Union is an infant in age by comparison; it dates from 1861. Despite this disparity the offices are nearly of a size as these statistics witness:

	Life Funds.	Premium Income.
Commercial Union	£2,603,108	£241,034
Hand-in-Hand	1,743,521	252,582

The rates of interest earned are identical, except that the former has an advantage of ninepence over the level four per cent. of the latter. Whereas the Commercial assumes a conservative rate of three per cent., the Hand office contents itself by assuming the prehistoric two per cent. The older has the distinction of quoting the highest premiums per cent. of any office, yet it has been worked at a low ratio of expense. The 13.64 per cent. of the Commercial, although it includes cost of valuation, is perceptibly higher than the 12.03 of its worthy old rival. But the pair are both excellent, and both able, it would seem, to battle unaided, and it is being enquired whether the merging had not better stop soon. Whether policyholders really care whether offices amalgamate or not is perhaps questionable, but the critics in print are very severe.

Solomon of old might have been worried by the problem the Liverpool Chamber of Commerce is putting. Somebody wants to know what, in the official Canadian view, is the home value of steel plates produced in this kingdom. It must be explained that two associations exist: one in England and one in Scotland. These bodies fix the price for English plates in England and for Scottish plates in Scotland. But the Scots sell at any price they individually please in English territory, and the English act independently on Scottish soil. Both again make ferocious competition in Ireland and in all other parts of the world. Whether and why the English, Scottish or Irish price should be the criterion is what everybody demands. The situation is of Canada's making, and only Canada can solve the riddle.

It is said with some show of authority that the officials in the Canadian Department in London are enjoined strictly to take no sides in the controversy of the hour. The neutrality is appreciated. It is entirely constitutional, and, moreover, it is eminently politic. There is a suspicion about that the colonies want to "rush" Britain, which it would be unwise to foster, whatever end was sought. People of the anti-Chamberlain persuasion are beginning to say that the colonies are after all the little end of the egg. In area they may be large and their population may be abnormally acute; but we are reminded that a dozen million people are fewer than forty millions, and that the working balance necessary to record a political majority in the new countries is actually very small. This is the reaction from the more frenzied form of Imperialism, and it forces to the front arguments that some people don't care to see. The Canadian attitude is correct. Such candidatures as Sir John Cockburn, formerly an official of the Commonwealth, who runs in the Chamberlain interest for West Monmouth, has provoked some unpleasant gibes. Just as the colonies find London intervention irksome, are home-dwellers commencing to chafe at the menace of a colonial yoke.

The markets are in a somewhat disordered condition. Now that raw cotton is easier and work is more abundant, certain manufacturers are hampered by difficulties in arranging deliveries. Wool, which, while still extraordinarily dear, seemed to threaten to go back, has had a new firmness imparted by the appearance of Yankee speculators on the Bradford exchange. More blast furnaces have been blown in on the north-east coast as orders from the Continent have arrived. A slight improvement is something like general in the shipyards and plate works of the Tyne, Tees and Wear. Copper dealings are more active in face of slightly rising values. In tin there is no buying. Cereal values are maintained fairly despite the little depression in demand that occur on alternate days. Canadian butter in the Manchester market is rather well sought, as it is realized that at present its quality is at its best. Affairs on a broad survey are demonstratably better than for a little while back, but our retailers are suffering, the middle classes have little to spend, and approximately one-tenth of our working people have no definite income at all.

NORTH COUNTRY.

Manchester, Oct. 14th.

* * *

HAMILTON BOARD OF TRADE.

The Hamilton Board of Trade recently held a special meeting to hear an illustrated address by Mr. J. A. Culverwell, managing director and advisory engineer of the Central Ontario Power Co., of Peterboro, on "The Waterways of the World, and the Merits of the Proposed Outlets of the Trent Valley Canals." Mr. Culverwell is a strong and untiring advocate of the completion of the Trent Valley Canals, and of the Port Hope outlet,—both on the platform and in the press. The Board thanked Mr. Culverwell for his address, and recommended Government enquiry respecting the canal outlet. The following are the terms of a resolution passed at the meeting of 12th October:

Resolved, that in the opinion of this Board the commercial, agricultural and manufacturing interests of this country, and particularly the interests of the Province of Ontario, will be greatly helped and advantaged by the early completion of the Trent Valley Canal;

That this Board is gratified that the Minister of Railways and Canals has already appointed an engineer to examine upon the two routes proposed as southern outlets of the canal;

That this Board respectfully urges upon the Minister of Railways and Canals the importance of a full and comprehensive report on both routes being prepared, based upon modern methods of canal construction;

That this report should include an estimate of the cost of improving and deepening the harbors of Port Hope and Trenton, the cost of operating railway and road bridges, the expenditure incurred in buoying and lighting both of the proposed routes from the mouth of the Otonabee river;

That in the opinion of this Board the estimates should be based upon minimum depths of 8 1-3 feet on the lock sills, 9½ feet in the canal prism, and 10½ feet in river and lake channels; also, that the river and lake channels should be 200 feet wide on bottom, with adequate additional width on Rice Lake to provide against the contingency of rough navigation;

That the costs of damages for abstraction of water in respect to both routes, the danger of land-flooding and damages as to land and property on both routes should be carefully gone into and reported upon in detail;

That the question of comparative time in making through trips by either route should be reported on, and the advantages or disadvantages of either route reported on so far as they relate to the question of returning freight both from the United States and from Western Ontario.

* * *

HINTS ON BANKING.

Hints on Banking—Compliments of the Bank of Hamilton, Brantford.—These ten words form the title of a brochure of sixty pages, which "does not aspire to be a treatise on banking, but only to give simple definitions of some of its forms and brief directions how to conduct ordinary transactions with a chartered bank." It abounds in detail and suggestion, and will be welcomed by many to whom the putting of money into a bank or drawing it out are operations involving as great a mystery and as much dread and false shame as they were to W. D. Howells, the novelist. That distinguished man has recently narrated how, when he received his first cheque from Ticknor & Fields (he had then just arrived in Boston from Ohio, and was both green and shy), he kept it for months because he did not know what to do with it. At last, having determined to use the piece of paper, he asked a friend the question: "How do I get the money for this?"—and the future poet, critic, author, got his first lesson in current financial procedure.

The book tells what a bank is—what an account current is—how to open a savings account—what deposit slips are for and what a cheque is (with diagrams of both). Also, it explains interest, notes and drafts, tells how to remit money, gives warning of the varying nature of endorsements, and some good advice about "overdrawing contrary to rules—a Bad Habit." These things, and many others more or less desirable to be taught that increasing class which has to do with banks, are explained with minuteness, and, we presume, with accuracy, for we do not pretend to criticize what the compiler has done with so much patience. What we cannot help criticizing, however, because it seems to us altogether foreign to what we are accustomed to expect in any book issued by a chartered bank, is the arrangement and appearance of the book. Forty-one pages out of sixty are devoted to advertisements. Many of these, it is true, are of prominent and respectable firms, life companies, loan companies.

But we submit, respectfully, to the publisher that it would have been more in consonance with the dignity of a bank to have exercised some more careful supervision over the kind of advertisements accepted. Turning to pages 34 and 35, for instance, we find definitions of protest, forgery, sterling bills, etc., on the right hand, and on the left, cards an inch in depth telling how So-and-So cures rupture; how a certain remedy kills cockroaches, bed bugs, rats and mice, and how certain people keep a "Recherche Funeral Emporium." This is not pleasant reading—not what one expects to find in a book entitled Hints on Banking. It could not have been necessary to accept such advertisements from motives of economy, and the purpose of the book ought not to be money-making by such means.

* * *

LIFE ASSURANCE MATTERS.

The Insurance Company of the State of Pennsylvania is sending out some photographic reproductions representing its handsome office building in Philadelphia, in commemoration of November 5th of this year being its one hundred and tenth business anniversary. With one exception, the above corporation is the oldest joint stock insurance company in the United States, and its continuous existence in three centuries is an interesting milestone to the insurance fraternity.

In the monthly report for August of the Department of Trade and Commerce, at Ottawa, we find the following from Mr. Alex. MacLean, our commercial agent at Yokohama: "The Japan Daily Mail of this city quotes Mr. J. T. Hamilton, general manager for the East of the Equitable Life of New York, to the effect that: 'The excitement and suspense anterior to and ever since the beginning of the war with Russia have paralyzed many branches of business, life assurance amongst the number, so that, practically, the operations of the great companies have been suspended, but their expenses still go on without material diminution. When the war comes to a close, a consummation devoutly to be wished, prospects seem eminently favorable.' It is further stated that this company have manifested their confidence by making a liberal investment in the war bonds recently issued in London and New York by the Government of Japan. It is remarkable how the well-to-do and middle classes in Japan and China take to life insurance. The Canadian companies here are the Manufacturers Life and the Sun Life.'"

* * *

FOR DRY GOODS DEALERS.

The fur establishment of Chas. Desjardins & Co., Montreal, was entered by burglars one night last week and fur coats, boas, mantles and other goods stolen to the amount of $20,000.

The Hamelin & Ayers Company, Limited, Lachute Mills, Que., have received from the Dominion Government a charter authorizing them to manufacture woolen goods. T. H. and J. T. Ayers, of Lachute, are prominently connected with the enterprise.

The sale of the mills, plants and other properties of the Canada Woolen Mills Co. to Mr. W. D. Long, of Hamilton,, which, it will be remembered, was contested by Mr. G. F. Benson, of Montreal, has been declared by the courts to be illegal, and the company's assets will be offered for sale over again.

Once in a while, a smart-Alec gets hit. Here is an instance: "The other day," said a shipper who worked in a local woolen house, "we got a large order in from D—— on London. So I packed it up, and then I thought it would be a good joke on him to nail the lid tight. So I began on it, and put a nail in every inch along the sides, then I sat down to chuckle as I thought of the job the customer would have in getting the case open. But I laughed too soon, for just then one of the fellows came in and said, 'Got that order for D—— packed yet, Bill?' I said, 'Yes, sir, all ready to go out.' 'Well, he has just telephoned in that he does not want that piece of worsted, so you'll have to open the case and take it out.'"

The deep-seated desire on the part of European cotton manufacturers to find an independent source of supply of raw material away from the Southern States of America is steadily taking more definite shape. The International Permanent Committee appointed by the recent Cotton Congress in Zurich, Switzerland, is now holding regular meetings in Paris, at which Mr. Macara, the head of the Lancashire Cotton Association, presides. The committee is perfecting its organization, and the interest of all European countries in its projects is daily becoming more manifest.

* * *

FOR GROCERS AND PROVISION DEALERS.

It was announced a few days ago that large quantities of Manitoba wheat had been bought for shipment to Minneapolis, where it will be milled "in bond" and mixed with the lower grades of American grain.

The SS. "Telemachus" left Vancouver a few days ago bound for Liverpool with a cargo of 65,000 cases of salmon, which, it is interesting to note, were put on board and stevedored by an electrical process.

Word comes from St. Louis that the Canadian exhibitors of poultry at the Exposition practically swept the board in many classes. Hamburgs, Polands, and ornamental bantams were especially favored.

There is the usual fall car shortage in some districts, both in Ontario and the West, but it is not nearly so marked as last year. For one thing, the crop is not so large in proportion, while the railroad companies have added largely to their stocks of rolling equipment since last year.

Montreal advices of yesterday say that the export of butter to Europe from that port was almost a third greater than last year up to same date. The number of packages shipped up to 29th October was 458,957, compared with 314,036 same period last year. Cheese, on the other hand, shows a falling off in shipment. The quantity exported was 1,838,637 boxes, as compared with 2,174,800 boxes last navigable season up to 30th October.

Mr. J. J. Cowie, the Scotch herring curing expert, has now gone to the Pacific coast to investigate the possibility of developing such an industry there. Some of the Nova Scotia herring cured under Mr. Cowie's superintendence realized $13 per barrel, the ordinary price being only $2.50. Enormous quantities of herring have been frequenting the British Columbia coast during the past two or three years, and it only remains to be seen whether their quality is right.

Mr. Alex. MacLean, Canadian commercial agent in Japan, writes from Yokohama that the quality of Canadian butter going into that country is very fine. The trouble is, however, that it cannot be obtained when wanted. The remedy for this state of things, no doubt, would be to increase production in British Columbia as rapidly as possible, the supply being quite limited there so far. By dint of energy and good quality, Mr. MacLean thinks the Canadian article should ultimately beat all competitors in the Japanese market.

* * *

WHAT THE AGENT CAN DO.

He need not be able to figure a rate that will cover the hazard of the standard electric lighting wire, or how many volts, ohms, kilowatts, amperes, or other measures of the lightning fluid the wiring would stand in event of short circuit caused by birds, rats, mice, rain, snow or other incendiary short circuits; but he can tell the insured all about values, either commercial or replacement; of the dangers of cigars or cigarette stumps in the sawdust spittoon; spontaneous combustion of sawdust and oil; point out the danger of the stovepipe through ceiling, wainscotting or roof; to K.O. the open front and rear exposed by frame brick, and to write the policy that a loss will not be a godsend to the loser.

With these qualifications, that require only common sense and industry, he will steer clear of non-occupied property; non-paying property; nuisance property; litigated property, and all of the class of property that carries a bad moral hazard, and by sticking to what he knows, and charging for what he doesn't know, the rate will do the rest, the company will make money and all will be happy.—Fireman's Fund Record.

* * *

FIRE AND MARINE INSURANCE.

Marine underwriters, says the New York Journal of Commerce, last week doubled their war risk rate on shipments in areas likely to be affected by the operations of the Russian fleet. The rate now stands at 1 per cent. Insurance men report a decided increase in the demand for war risk insurance from shippers anxious to have their engagements protected before any incident shall cause high figures. There is also a considerable business done in covering this hazard on transatlantic grain cargoes at the very low rate of 1-16 of 1 per cent. The increased activity in war insurance is due to the difficulty growing out of the North Sea incident.

* * *

FINANCIAL.

The Crown Bank of Canada has opened a branch at Brockville.

It is not Mr. Fawcett, but Mr. H. Irwin, formerly manager of the Merchants Bank of Canada at Ingersoll, who goes to Sherbrooke to succeed Mr. Carruthers.

The mercantile agency of R. G. Dun & Co., which has been housed for so many years in the Toronto Board of Trade Building, has now moved to 70 Bay Street, where pleasingly light and commodious offices have been secured, covering an entire floor.

A very considerable increase over October, 1903, is shown by the clearing house figures of Toronto last month, namely, $82,763,000, as compared with $68,158,000. But the total for ten months is much less, indicating a decline in speculation. Clearings at Toronto for various periods have been:

October, 1904	$ 82,763,595
September, 1904	66,245,919
October, 1903	68,158,542
October, 1902	73,937,863
October, 1901	53,983,377
October, 1900	47,246,005
Ten months, 1904	664,045,167
Ten months, 1903	693,974,646

The financial statement of the United States Steel Corporation for the quarter ended September 30th last shows net earnings, after the usual deductions for renewals, repairs, maintenance, fixed charges and interest on bonds of $18,773,932, which is below what was expected. Comparison with the same quarter for three years past follows: 1903, $32,422,954; 1902, $36.954.488; 1901, $28,663,843. Net earnings of the nine months of this year aggregate $51,709,889. In 1903 for the same period they were $94,133,970, and in 1902, $101,323,004. A striking feature of the statement is the item showing a surplus over charges and dividends of only $1,312,988, a decrease of $1,464,656, compared with the previous quarter, and of $10,998,707, compared with the corresponding quarter of 1903. Unfilled orders on hand on September 30th last amounted to 3,027,436 tons, a decrease of 701,306 tons over the same period last year. During October, however, there was a very pronounced increase in the orders received.

A despatch from Montreal gives the bank clearings for yesterday as $5,871,686, compared with $4,381,852 on Wednesday, and $3,977,000 on Tuesday, to-day's being the largest in the history of the city's business.

There is a distinctly improved condition of things discernible in the municipal bond market in Toronto. Values are hardening, and whereas a short time ago prices ranged from 4½ to 4⅜, they are now usually around 4¼ to 4⅛. The improvement seems likely to continue.

Commercial failures in the United States during October, according to reports to R. G. Dun & Co., numbered 883, involving liabilities of $10,525,728. This is a striking improvement as compared with the corresponding month last year, when there were 1,086 defaults, with liabilities of $18,387,567.

Bank clearings in Montreal for October were $102,601,000, compared with $100,549,000 for the same month a year ago, and $87,948,000 for September this year. Two years ago the clearings of October were $107,848,000, so that the present volume is drawing near to the high water mark of 1902. The total for ten months, amounting to $841,381,000, is now only $85,000,000 less than the clearings for the same period in 1903.

Word has been received in Toronto yesterday that Mr. Wm. J. Holliday, inspector for the Toronto Mortgage Corporation, was the victim of a shooting accident in Haliburton, near Minden, on Tuesday, which may cost him his life. Mr. Holliday has been in the employ of the Toronto Mortgage Corporation as inspector since its organization some five years ago, previous to which time he was employed in the same capacity for the Union Loan and Savings Co. He has been, we are told, during his career, interested in lumbering operations and in loan companies in Manitoba and the North-West.

⁂

—The Wall Street Journal is of opinion that by making a change in its processes the Lake Superior Corporation could reap additional bounties and at the same time utilize its raw material to better advantage. Roughly speaking, the company's plan is to export some Helen Mine ore and to import pig iron from Duluth, which is converted into Bessemer steel rails; also to import pig iron ore from which it will make pig iron. The journal thinks that in importing pig iron for rails it loses: (1) The Canadian bounty on pig iron; (2) the Ontario bounty on pig iron. Wrapped up in these losses are the losses on iron ore, which will be as follows when the company makes its own pig iron from imported ore: (1) The $1 a ton bounty of the Ontario Government on pig iron made from Ontario ore; (2) the decreasing percentage of the Canadian bounty, which is $3 on pig iron for the proportion of the Canadian ore used, and only $2 on the proportion of imported ore used; (3) the American duty of 40 cents a ton it must pay on the ore it exports to the United States; (4) the loss in freight on account of the imported and exported ore substantially passing each other. All these losses would be saved by the company making pig iron from its own ore, the difficuity being that its steel plant is a Bessemer, while its ores are not Bessemer.

⁂

CLEARING HOUSE FIGURES.

The following are the figures for the Canadian Clearing Houses for the week ended with Thursday, November 3rd, 1904, compared with those of the previous week:

	Nov. 3.	Oct.27.
Montreal	....	$22,683,248
Toronto	17.606,480	17,605,094
Winnipeg	7,752.585	7,182,811
Halifax	2,082,596	1,924,680
Hamilton	1,264,025	1,235,264
St. John	....	1,018,270
Vancouver	1,491,466	1,691,296
Victoria	722,668	661,552
Quebec	1,466,100	1,534,612
Ottawa	1,836,284	1,905,968
London	965,123	842,853

SOME SASKATCHEWAN GLEANINGS.

When one reaches Saskatoon, he has passed out of Assiniboia into the still further north territory of Saskatchewan. Away to the north further still is Prince Albert, the terminus of this Prince Albert branch of the C.P.R. I am writing now from Rosthern, which is north of the Assiniboia boundary some forty miles due east from Battleford, say eighty miles, and north north-west from Regina over two hundred miles. It is in many ways an interesting community. Here are to be found, among the business people, Friesens, Jansens, Wiebes, and Zimmermans testifying to the admixture of north of Europe people among the population. Also the omnipresent Scot, represented by Stewarts and Ballantynes, McEwens and McGregors. One is tempted to quote here Sir John Macdonald's well-known humorous lines about the Macs, repeated on one occasion at Ottawa—but the Celt is a fiery individual, who can often scent an insult before he can see a joke, and from prudence I forbear. Not far away from this place, the Canadian Northern road, which runs into the Territories from the upper western corner of Manitoba, has already reached a point on the Saskatchewan just north of Saskatoon.

Eight grain elevators inform one of Rosthern's importance as a grain centre. Four years ago the town was hardly big enough to write its own name; an old caboose, deposed from its wheels, and a primitive bit of platform served for the railway station. The first settlers were mostly Mennonites, who hived off from the Mennonite reserves in Southern Manitoba; and others of the same ilk joined in from the Dakotas; also came the Galicians in great numbers and Germans from the Fatherland. Here one sees the Doukbohor—big, rugged, deeply religious—embracing and kissing his hoary compatriot in public with unblushing simplicity. By the way, some forty of these "crazies" were about to begin another recent pilgrimage when their holy fervor was checked by a wise application of pressure from the authorities. The corporal of the N.W.M.P., in charge of the "round up," said that this latest fanatical outbreak met with no sympathy from the rest of the Doukhobors, who not only held aloof from it but refused assistance of any kind to the misguided pilgrims; so when one considers that only forty out of ten thousand of these much-abused settlers are disaffected, the Doukhobor situation is hopeful enough. Where these people are best known, they are most highly spoken of; their credit is gilt-edged, and one instance of a Doukhobor failing to meet his financial obligations is not known. Rosthern is a busy, bustling, animated town of about 800 persons, amazingly cosmopolitan. Here, bright young men from Waterloo, Ont., are eagerly sought after; their bilingual home training fits them for this Babel of tongues. It is interesting to observe how skilfully they pick up in a short while sufficient of each of the various languages to put their customers at ease. There is no end of opportunity in our great North-West for the young men of German extraction who seek to improve their condition; some here are in business for themselves, and many others are serving as clerks at increased remuneration. The place is supplied with two tolerable hotels, has a grist mill, two chartered banks, a fine public school, and many handsome business blocks.

Our next stop is at Duck Lake, near the historic ground where the heroes of 1885 had it out with Louis Riel. Batoche is some seven miles distant, and the rifle pits and other evidences of that stormy period are here and there in evidence. Duck Lake is settled mostly by French and French half-breeds; this may in a measure account for the lack of enterprise that has hitherto characterized this curious hamlet. Just imagine in this year of grace my looking out of the hotel window at the slow and deliberate movements of the village carpenter, who is building a coffin for the oldest inhabitant, whose death took place yesterday. The youngsters in their play come along, peep in, play curiously with the fancy handles that form the chief decoration of the home-made casket. Signs are not wanting, however, that even Duck Lake is wakening up. A grist mill and numerous elevators have been erected quite recently, and a new hotel, well conducted, is a welcome addition to the town's attractions.

Prince Albert is the terminus of the branch, and one of the oldest settled parts of the West. Here the Hudson's Bay established a post many years ago; they still continue to carry on the store in an old-fashioned, low log building. They also maintain a grist mill and an elevator. The town is beautifully situated on the banks of the Saskatchewan, whose wooded sides lend loveliness to the view. The wide sweep of the river is no less grand; the main street fronts it, and gracefully follows its slowly receding curves. Here and there in the winding of the stream sawmills appear, all working to their limit. New buildings are going up: two new hotels are being fairly rushed; they are sorely needed. At our present hostelry there is no choice but to double up. My bedfellow, a barrister from Rosthern, was most anxious to see what our bed linen was like—it proved to be horribly soiled! and this circumstance decided his spending the night on the parlor sofa. The "kick" registered with the hotelman in the morning met with the response of having the same linen next night, but reversed, the sheets being turned end for end. Relief from this sort of thing is near at hand in the fine hotel buildings nearing completion, and none will welcome more gleefully the needed accommodation than the Knight of the Grip.

Rosthern, 22nd October. RAMBLER.

* * *

BOOKS AND PAMPHLETS RECEIVED.

For a week or two past we have been favored with dozens of brochures intended to influence the election which took place yesterday, and the result of which will not be known until after this paragraph has been written. Some of these were without decent argument—merely abusive of some person or party. Others were skilfully framed, full of *ad captandum* pleas. Still others were labored and solemn, if not high-minded, reminding one of the composition of what Hamlet describes as "a politician . . . one who would circumvent God." Certain of these were read in this office with interest, sometimes amusement; the rest we dismissed with slight glances, because one was aware instinctively of the scorn and contumely they contained—for somebody or some party.

The uninstructed man, who does not read newspapers giving both sides of controverted matters of public policy, and who cannot attend public meetings, must have hard work to make up his mind these days as to the merits of the two parties. On the one hand he is told to "beware the disappointed Conservatives, greedy for power," and to "vote for Laurier, the man who has made Canada a nation." On the other, he is implored to note, as evidence of corruption in high places, that "members of the Liberal party who have entered the Laurier Cabinet poor are now wealthy," and to "down with this despot, the Minister of Militia."

A man who has been accustomed to consider Sir Wilfrid Laurier and Mr. R. L. Borden as men of honor, ability and high aims could not but be puzzled when he heard the one decried as selling himself to the corporations, and the other as offering a silly schoolboy's solution of a question involving $150,000,000 of the people's money. In trying to comprehend matters of moment in statecraft, involving the future of a growing country, he could hardly be helped to a decision by hearing the Premier of Canada disparaged as fettered by claims of race and religion, or his leading opponent as hampered by his ties to a party filled with "mossbacks" and enemies to the liberties of the people.

Pilkey's Street and Street Railway Service Guide.—This little pocket book, published by Daniel Rose & Son, Bay Street, Toronto, price ten cents, gives minute information about the streets of the city; suburban lines; the cab tariff; churches and schools; and has a list of fire-alarm numbers.

A Year's Disclosure and Development.—This is Pamphlet No. 11 of the National Municipal League of the United States. Of this body it has been said that "through its committees on municipal accounting and statistics, instruction in municipal government, nomination reform, the League has made the most notable contributions to the solution of the grave and vexed municipal problem." The present publication consists of the address at the Chicago

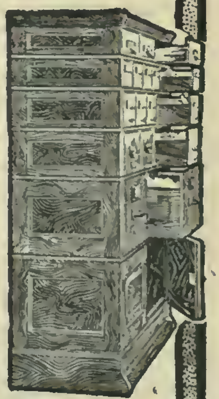
Kinematically correct
Steam does not roast Setter.

The Sectional Idea



¶ Do you remember the building blocks of boyhood days?

¶ How each little block was a perfect multiple of some bigger block?

¶ And how each block FITTED IN SOMEWHERE, no matter what its size?

¶ That's the Sectional Idea—Filing Cabinets built on the multiple plan. They are interchangeable. They always FIT IN. ¶ May we give you more information?

IN HER PUBLIC LANDS

many thousands of square miles in extent, the Province of Ontario offers unexcelled inducements to mining prospectors and capitalists looking for large returns for their money.

Many valuable deposits of iron, nickel, copper, gold silver, arsenic, mica, corundum, graphite, granite, limestone and other ores and minerals have been found in Northern, Eastern and Northwestern Ontario, and many more are doubtless yet undiscovered.

For maps, reports, Mines Act, etc., apply to Hon. E. J. Davis, Commissioner of Crown Lands, or Thos. W. Gibson, Director Bureau of Mines, Toronto.

meeting of 1904 of the secretary, Mr. Clinton Rogers Woodruff, of Philadelphia. It reports the transactions of the year in the way of fighting dishonesty in municipal life; convictions of bribers and grafters, and the improvement of American cities, morally and physically.

* * *

NEW PROCESS FOR MAKING PAINTS.

A representative of the Monetary Times had the pleasure of witnessing the other day the working out of a series of experiments to show a new process for the economical treatment of sulphide ores. By this process the St. Louis Reduction Company, Limited, a corporation which has received an Ontario charter, and comes under the Ontario Mining Companies Act, proposes to produce such paints as zinc white, white lead, chrome, and other colors direct from the ore at a cost of something like 2½ cents per pound, the sulphur being saved as well as all but about 10 per cent. of the acid used. In several districts of Northern Ontario there are vast reefs of various kinds of ore—copper, zinc, cobalt, nickel, gold, and platinum. Some of these have been worked and the results sent away for treatment, but in the majority of cases the percentage of valuable metal is too small to admit, under present conditions, of reduction at a profit, there being no smelter available, and many valuable by-products being taken by the refiner as his perquisites. The method now referred to is very cheap and very simple, relying upon chemical reactions in their least complete form. Certainly, the many colors produced are beautifully clear and well defined.

* * *

THE TRAINING OF AGENTS.

At the annual convention of the National Association of Life Underwriters of the United States, held at Indianapolis in October, 1904, the editor of the Western Underwriter, Mr. Cartwright, spoke informally on the subject of "Outside Observations on Training of Agents." Calling attention to the lack of permanency in the agency forces, he declared that young men should enter insurance with the view of making it their life work, and learn the business just as they do others. In the early years of his life the young man takes on the color of his profession. He is satisfied with receiving a smaller income. Mr. Cartwright believes that too many enter the calling as a stepping stone or experiment, and he is quite probably right. He believes in civil service in life insurance and that men should be appointed to the general agency ranks from the sub-agents of the same company, either from the agency where the vacancy occurs or from some other.

Respecting the educational movement generally, of which so much is heard in the present day, the speaker held that education is a valuable feature, but can not supplant the school of experience and the development of those faculties necessary for success in soliciting. Mr. Cartwright feels that general agents and companies owe something to the public and should therefore employ agents that are competent to present propositions to business men in a business way. The complaint is no longer heard that a life assurance agent, provided he be polite and capable, is refused a hearing. There was a time when that was true, and it was in nine cases out of ten the fault of a garrulous, boring, bullying agent. With the improvement in the character of the agent, the companies have benefited.

* * *

—The Dominion Government has purchased two properties in Montreal recently for post-office purposes. One is for an up-town general branch on St. Catherine Street, purchased for $47,700; the other for a station for the pneumatic tube system, the price of this site being $37,000. The establishment of this station is expected to do much to prevent the present congestion at the main building, especially as it will save much of the matter which now passes through Montreal, but is not distributed there, from swelling the large receipts at the latter place.

—From a summary made by the "Vancouver Province," it appears that during the month of September the total production of mines in the Kootenay and Yale districts was over 100,000 tons of ore. The ore is divided as follows: Silver lead, 3,853 tons; zinc, 90; gold, 2,158; gold-copper, 99,249. Besides this there was an additional tonnage of various ores treated at the Ymir, Wilcox, Queen, Relief and Granite stamp mills and at Cambourne, amounting, perhaps, to 10,000 tons more.

* * *

—We understand that further difficulties have arisen between Quebec boot and shoe manufacturers and their employees. The trouble seems to have something to do with the union. Many of the workers are members of the National Union, and the employers have posted notices to the effect that the employees must join the International Union, on the ground that goods made by other than International Union can find no market in the West. Some of the men object to taking this course, and may rebel.

* * *

—According to figures compiled by Lloyd's Register of Shipping there were on September 30th last, 393 vessels under construction in the United Kingdom, with a gross tonnage of 1,046,308 tons. Of these, 353, with a gross tonnage of 1,029,842, were steamers, and 40, with a tonnage of 16,466, sailing vessels. Wood played but a fractional part as a construction material in either case. The tonnage under construction is now about 53,000 tons more than it was at the end of June, 1904. Compared, however, with the total reached in September, 1901, which is the highest on record, the present figures show a reduction of 367,000 tons, or 26 per cent. Of the vessels under construction as above, 764,170 tons are under the supervision of the surveyors of Lloyd's Register with a view to classification by that society. In addition, fifty-three vessels of 136,966 tons are building abroad with a view to classification.

BANKERS

MONTREAL—Molsons Bank; Imperial Bank of Canada.
NEW YORK—The Importers and Traders National Bank
LONDON ENGLAND—The National Bank of Scotland.

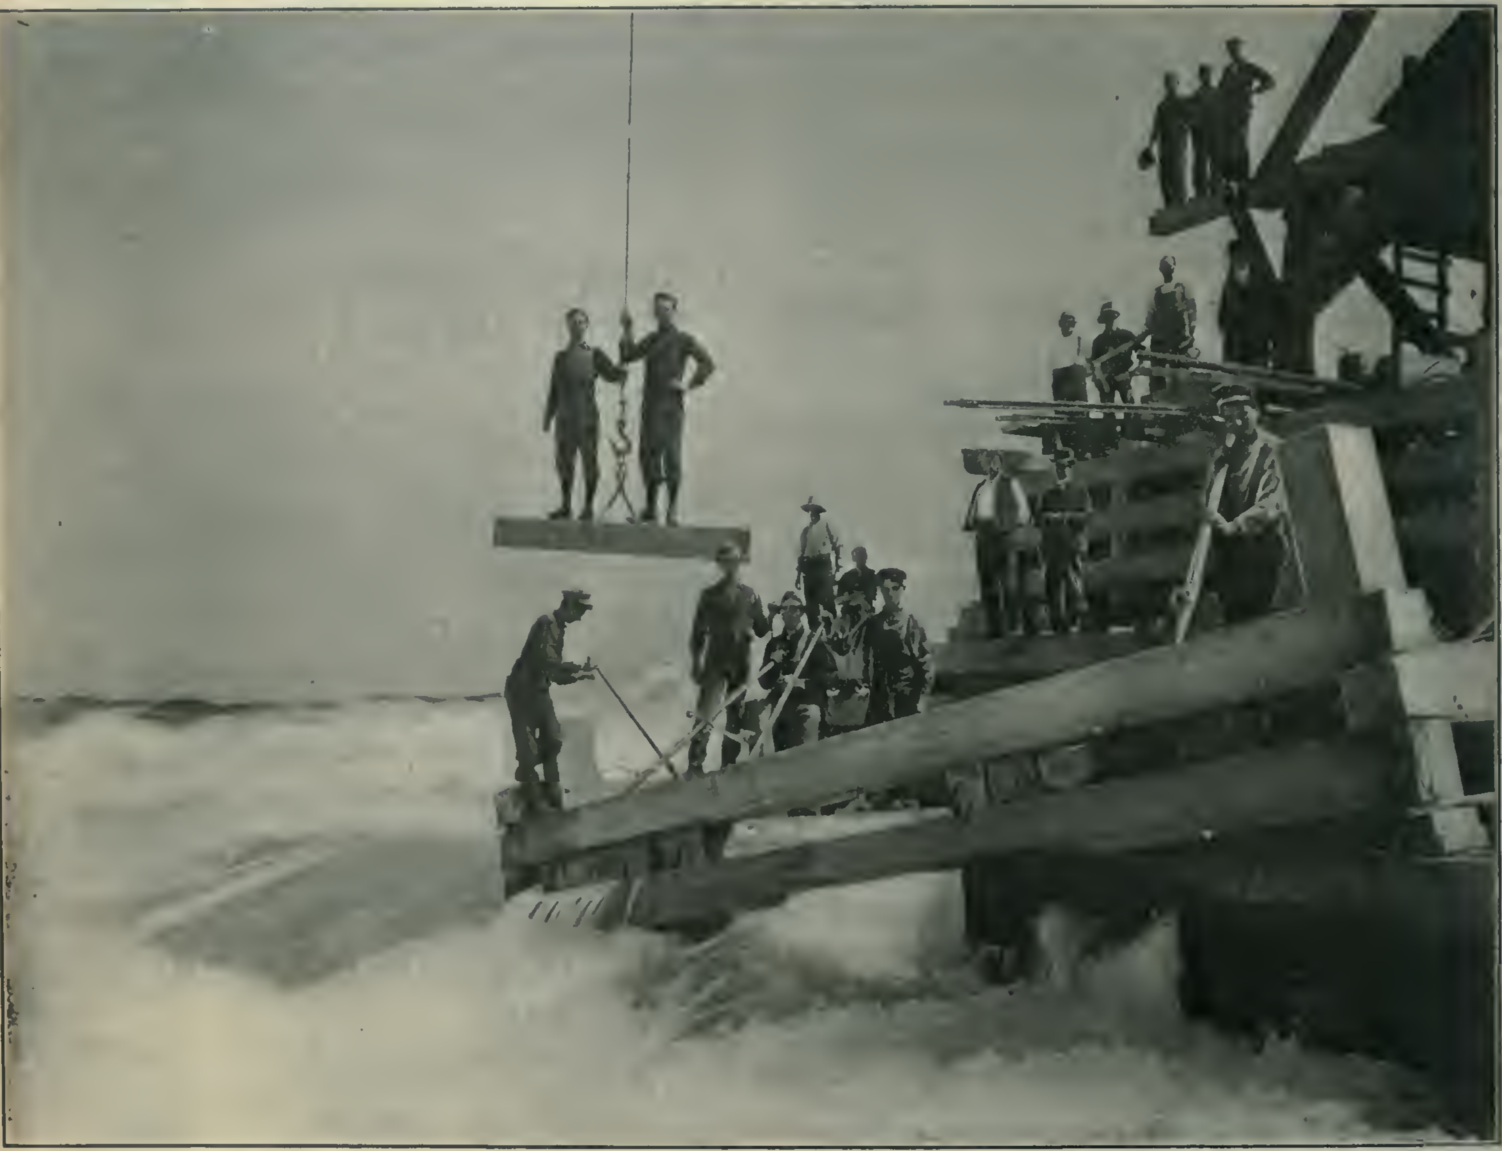
A COLOSSAL INDUSTRIAL ENTERPRISE.

A further portion of the extensive works of the Electrical Development Company of Ontario, Limited, is illustrated in our columns to-day—illustrated, as we think, in a particularly striking way. Sailors, we know, become contemptuous of the dangers of winds and waves through constant familiarity with them. Members of a city fire brigade take the most frightful risks at a midnight blaze in plain sight of wondering and admiring citizens. And so we assume that engineers and their workmen confront day by day, in pursuance of their work, perils which would unnerve a man who is not accustomed to them.

The group of men represented in this picture are looking at the camera as calmly as if they were on the walls of a solid city building, instead of on an unsettled crib in the midst of the Cascade rapids of Niagara, with a mass of water twenty feet deep rushing past them at thirty miles an hour. And they know, too, that if one misses his footing and drops in there is no human help for him. Such, in fact, was the fate of a workman on the very crib the reader sees in the adjoining photograph. He slipped, fell in, and was carried over the Falls.

A very sensible thing was done when it was arranged to have the principal of the School of Practical Science, Mr. Galbraith, the staff, and about 350 of the students taken by a special train to Niagara Falls a week or two ago. The trip was a surprise and a delight to them all. Even on board the railway they were learning something, for as the train was hauled by a modern type locomotive, a good object lesson for the embryo engineers was supplied. Further, Mr. Sommerville, the resident engineer of the G.T.R., accompanied the party, and explained to the staff and senior students the railroad problem between Toronto and Niagara.

Arrived at the Falls of Niagara, the somewhat large party was met by engineers of the three large power companies, viz., Mr. Mitchell, of the Ontario Power Co.; Mr. Value, of the Toronto and Niagara Co., and Mr. Smith, of the Canadian Co., who explained from Falls View the general plans of the different schemes for developing power which are now under construction. The students then marched to the head works of the Ontario Power Co., where Messrs. Sauer, Brandon and Thorne met the party and escorted them over the works of that concern, consisting of the gathering basin, the Dufferin Islands, the large conduit (18 feet in diameter), the power house and distributing station. Arrived at the Electrical Development Co.'s works, Messrs. Rust and Goodwin, engineers of that company, explained the more interesting engineering features, such as the tailrace tunnel under the Niagara river, which empties directly under and behind the sheet of water tumbling over the Horseshoe Falls. This we illustrated last week. For the Canadian Power Co. Mr. Smith explained the installation of the immense 12,500 horse-power turbines of that company now taking place, and a number of the students under his charge were taken down the wheel-pit (165 feet deep). Then the party were taken over the works of the International Railway Co. It is well that Canadian students should see for themselves by trips like this what enterprises Canadians are instituting. It is not many years since great industrial works like these, if attempted at all, would have been supplied with American or British money, and probably conducted entirely by foreign engineers. Canadian energy and Canadian capital are here giving a lesson to the world.



Launching of a Crib in the Cascade Rapids, Niagara River. Works of the Electrical Development Co. of Ontario.

The Bank of Toronto.

Mercantile Summary.

Branches of the Bank of Toronto have been opened at the corner of Queen and Parliament streets, Toronto, and at Allandale, Ont.

President Francis says the St. Louis Fair has lost at least a million dollars from not being allowed to open on Sunday. The important question is how much would it have saved by not being open week-days?—The Boston Transcript.

A retail druggist, in Ottawa, named T. Payment, is reported to be offering his creditors 40 per cent. of their claims. In 1902 he failed, then owing $6,000, and the stock was bought in for his wife, whose name he has since used as a cover.

The title of an article to appear in the National Magazine for November is: "Empire-Building in North-West Canada." One reads with some surprise that this article is by D. W. and A. S. Iddings, of Dayton, Ohio. Portraits are given of Bishop Grandin, of St. Albert, and Father Lacombe; of the heads of the great Canadian railways; of some members of the Ottawa Cabinet; and the best portrait we have ever seen of that fine old man, Lord Strathcona.

An assignment is made by Marie Virginie Amanda Dore, carrying on business in the dry goods line at Quebec, under the style of A. Tanguay & Co. Her name has been made use of by her husband, A Tanguay, who made a commercial failure in 1894 which was somewhat criticized and on which occasion he owed some $38,000. The present indebtedness is said to be comparatively moderate.——Another failure in the same city is that of H. Silberman, clothier, and also engaged in cap making in a small way, under the style of the Canada Hat and Cap Mfg. Co. He began business only a year or so ago, and has been found far from satisfactory in his dealings.
